The Measurable Difference

Getting information, help and service

You can get the latest ordering information and software updates by visiting www.mtssensors.com web site General contact information, shipping and office hours are listed below.

GENERAL:

Tel.: +1-919-677-0100
Fax: +1-919-677-2343
E-mail: sensorsinfo@mts.com
http://www.mtssensors.com

MAILING AND SHIPPING ADDRESS:

MTS Systems Corporation
Sensors Division
3001 Sheldon Dr.
Cary, North Carolina
27513, USA

CUSTOMER SERVICE:

Tel.: +1-800-633-7609
Fax: +1-800-498-4442
e-mail: orders@mts.com

TECHNICAL SUPPORT AND APPLICATIONS:

24 Hour Emergency Technical Support
Tel: +1-800-633-7609
E-mail: sensorsinfo@mts.com

OFFICE HOURS (EST):

Monday - Thursday: 8:00 a.m. to 5:00 p.m.
Friday: 8:00 a.m. to 4:00 p.m.

REMITTANCE ADDRESS:

MTS Systems Corporation
Sensors Division
NW 5872
P.O. Box 1450
Minneapolis, MN
55486-5872

QUOTE AND CONTRACT TERMS & CONDITIONS:

The parties expressly agree that the purchase and use of Material and/or Services from MTS Sensors Division are subject to MTS' Terms and Conditions, in effect as of the date of this document. To view or download the Terms and Conditions that are incorporated by reference into this and any ensuing contract, open your web browser and enter the following URL http://www.mtssensors.com/fileadmin/media/pdfs/Terms_and_Conditions.pdf. Printed Terms and Conditions can be provided upon request by e-mailing us at sensorsinfo@mts.com.

REFERENCE INFORMATION

Notices in this Catalog

This manual contains notices to highlight specific information as follows:

Notes:

These notices provide important tips, guidance, or advice.

Important:

These notices provide information that might help you avoid inconvenient or problem situations.

Attention:

These notices indicate possible damage to programs, devices, or data. An attention notice is placed just before the instruction or situation in which damage could occur.

Caution:

These notices indicate situations that can be potentially hazardous to you. A Caution notice is placed just before a description of a potentially hazardous procedure, step, or situation.

Related literature and media

Related support literature and software listed by part number and description below may be referenced within this Industrial Product Catalog. Current literature is provided in Adobe Acrobat Portable Document Format (PDF) and programming software can be downloaded at http://www.mtssensors.com/

How this catalog is organized

'Contact information' provides hours of operation, contact and remittence information and where to access company terms and conditions.

'Reference Information' provides an overview of catalog contents, related literature and media reference and a list of notices used within the catalog.

'Temposonics® Technology' Provides an overview of the principle of magnetostriction.

'Markets We Serve' Provides an overview of our market segments and some of their applications.

'Product Overview' Contains a high-level comparison chart of MTS sensor products and features.

'Temposonics linear-position sensors' Catalog contents

Product specifications, features, standard magnet selections, installation and mounting references, applicable accessories and ordering information organized as follows:

'R-Series Models RP/RH sensors - Analog' Data sheet

'R-Series Models RP/RH sensors - SSI' Data sheet

'R-Series Models RP/RH sensors - CANbus' Data sheet

'R-Series Models RP/RH sensors - DeviceNet' Data sheet

'R-Series Models RP/RH sensors - Profibus-DP' Data sheet

'R-Series Models RP/RH sensors - EtherCAT®' Data sheet

'R-Series Models RP/RH sensors - EtherNet/IP' Data sheet

'R-Series Model RD4 sensor - Various Outputs' Data sheet

'R-Series Model RF sensor - Flex Housing Option' Data sheet

'R-Series Model RS sensor - Various Outputs' Data sheet

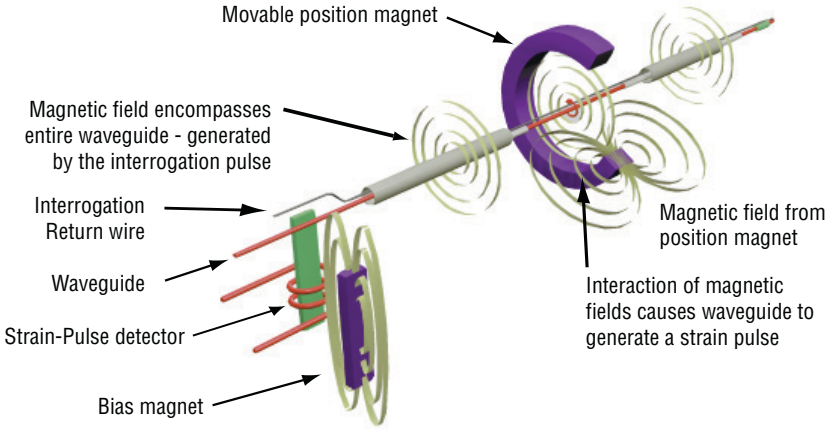
Magnetostrictive principle - Technology at its best

Time-Based Magnetostrictive Position Sensing Principle



Technology that guarantees precision and reliability

The best linear-position sensors provide absolute position measurement giving higher productivity and greater safety for machine and automation devices. MTS linear-position sensors outperform the competition, deliver accuracy and reliability under the most difficult conditions, providing excellent value for our customers. Our success is a result of more than 35 years of technology leadership, vertically integrated manufacturing processes and unsurpassed levels of customer support.

MTS Sensors was the first to realize the promising advantages for linear-position measurement contained in the magnetostrictive measuring principle developed by J. Tellermann. Tellerman's original design was used to develop Temposonics brand sensors: the first magnetostrictive position sensors, a technology that guarantees precision and reliability without equal.

Magnetostriction - what it is and how it works

The heart of MTS sensors is the ferromagnetic measuring element, also known as the waveguide, and a movable position magnet that generates a direct-axis magnetic field in the waveguide. When a current or interrogation pulse passes through the waveguide, a second magnetic field is created radially around the waveguide.

The interaction between the magnetic field in the waveguide and the magnetic field produced by the position magnet generates a strain pulse which travels at a constant sonic speed from its point of generation, the measurement point, to the end of the waveguide where it is detected by the sensor electronics.

The position of the magnet is determined with high precision and speed by accurately measuring the time elapsed between the application of the interrogation pulse and the arrival of the resulting strain pulse with a high speed counter. Using the elapsed time to determine position of the permanent magnet provides an absolute position reading that never needs recalibration or re-homing after a power loss. Non-contact sensing eliminates wear, and guarantees the best durability and output repeatability.

With our extensive know-how of ferromagnetic materials, magnetic effects and time-based measurement processes, MTS remains unrivaled in performance standards for non-contacting position measurement of the highest precision.

MTS Temposonics® linear-position sensors

Technology Positioned for Cost-Effective, Accurate, Reliable Performance in Industrial Machine Control Applications

R-Series sensors

Rod and Profile-style sensors

G-Series sensors

Rod and Profile-style sensors

Flexible mounting options

Including external machine mounting or in-cylinder installations (hydraulic & pneumatic)

E-Series sensors

Economical profile and rod-and-cylinder style sensors

Whether you call them position transducers, linear-displacement sensors, distance or linear-position sensors, MTS Sensors provides the most reliable and accurate magnetostrictive position sensors in the world. Temposonics sensors are ideal for monitoring and measurement systems, for machine control involving hydraulic, pneumatic, electromechanical or even manual positioning in industrial or commercial applications.

Temposonics® linear-position sensors out perform, out measure and out last the competition

MTS Sensors enable applications to work smarter and harder. Our full line of standard and custom linear-position sensors can fit virtually every type of industrial and commercial application imaginable.

Temposonics® linear-position sensors provide unmatched flexibility

With a variety of mounting, output and configuration options and can be easily installed in a cylinder or externally mounted to your machine.

Temposonics sensors are a cost-effective, high-performance, high-quality alternative to linear pots or linear encoders. When you add affordable cost to reliable, repeatable performance and zero maintenance , the choice is obvious, Temposonics.

Temposonics® Technology

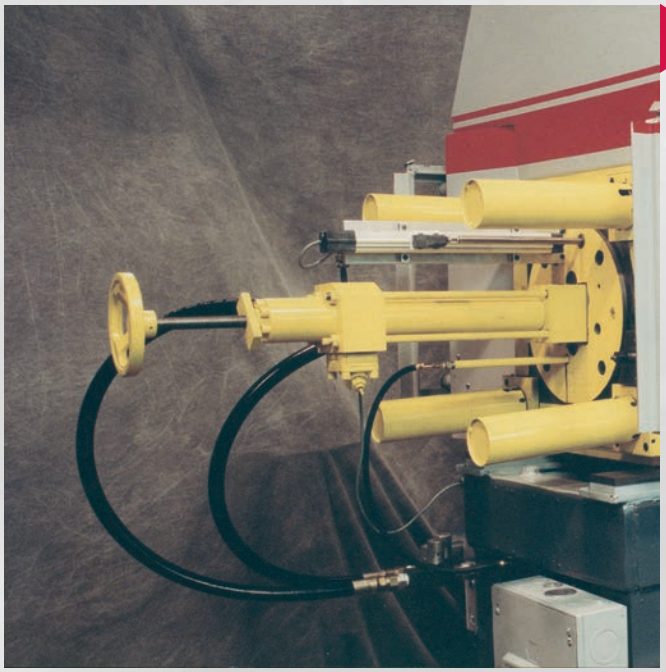
Superior Performance

High performance machines require high performance sensing solutions, and Temposonics technology has been the leader in precision magnetostrictive-based linear position sensing for more than 35 years.

Continuous investment in research and development has enabled MTS to produce the world's highest resolution magnetostrictive sensors, with the fastest update rates for high speed motion control, the tightest non-linearity specifications, and the latest in high performance fieldbus compatible outputs.

The wide range of Temposonics high performance sensors allow you to design, manufacture, and deliver the world's most productive manufacturing machines, and for your customers to deliver high quality and cost optimized products. In a globally competitive environment, superior performance enables high quality, high productivity solutions. Don't settle for less, choose MTS Temposonics Technology!

Plastics & Rubber Manufacturing



Higher Performance, Lower Cost

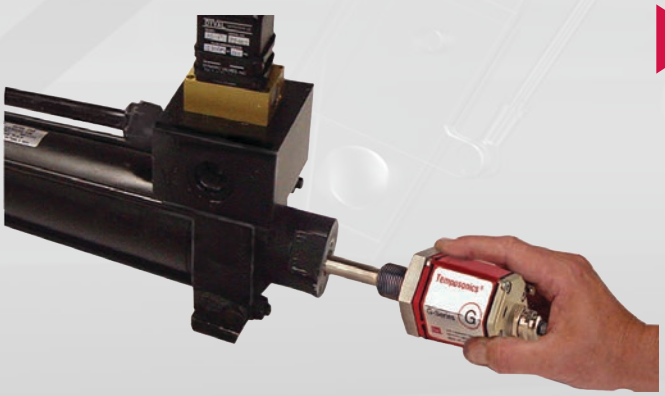
The world's highest performance injection molding machines, blow molding machines, tire presses, and extrusion filtration systems utilize Temposonics technology to deliver high speed, high quality results. High speed industrial networks combined with precision Temposonics sensors, help these machines produce highly precise products while delivering world-class productivity. Multi-position sensing optimizes costs by controlling two or more motion axes with a single sensor. Resolutions to 0.5 µm enable precision clamp and mold positioning. Legendary Temposonics reliability means that your machine is up and running. High quality and world class productivity – Temposonics Technology delivers.

Primary & Secondary Woodworking

Optimizing Productivity

MTS Temposonics sensors are designed and built to withstand the rigors of sawmill applications and have been that industry's standard for more than 35 years. Recent advances in high speed serial interfaces, enhanced shock and vibration resistance, and the availability of a precision velocity signal (simultaneous with position signal) have enabled new machine control algorithms that increase speed and improve yields. This adds up to increasing productivity and more profitable mill operations. MTS has led the way for more than 35 years, and our newest generation of sensors carries the tradition forward.

Fluid Power; Hydraulic & Pneumatic Cylinders



Operational Efficiency Plus High Performance

High performance, durability and value have made MTS' Temposonics sensor technology the standard for in-cylinder applications in the hydraulics industry for more than 35 years. In addition to superior features like linearity compensation, resistance to shock and vibration and EMI immunity, our innovative modular design allows for easy replacement of the sensing element and electronics without breaking the cylinder's high-pressure seal, thus significantly reducing maintenance costs and downtime. This means your machines are up and your operations are running at peak efficiency.

Motion Simulation

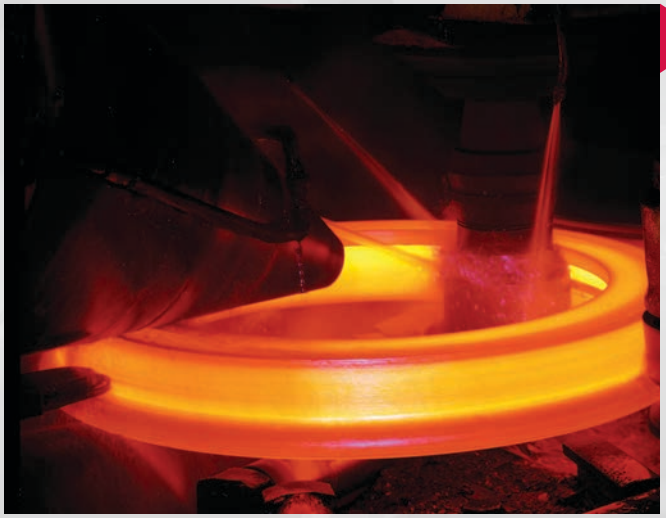
Entertainment Industry

For coordination with video display, position feedback of audience seat movement is a growing need in the entertainment industry.

Temposonics sensors deliver:

- Superior response and accuracy; achieves higher simulated motion fidelity
- Replaceable sensing element eliminates the need to drop hydraulic pressure or break hydraulic seal
- Embedded or detached electronics available for short installation envelopes
- Simultaneous position and velocity outputs enable high performance servohydraulic positioning

Steel Manufacturing and Metal Forming



Superior Speed and Accuracy

Our high-speed R-Series SSI position sensors continue to get faster and more accurate making them an ideal choice for a wide range of machine tool applications. Our SSI sensor also comes with a host of housing and installation options such as the NEMA Type 4X housing and high shock and vibration mechanics to improve immunity and operation in the harshest production environments.

- Resolution down to 0.5 µm (0.00002 in.)
- Accuracy as good as ± 10 µm (± 0.0004 in.)
- Cycle times as low as 100 µsec.

Process Industries

Quality Manufacturing

By optimizing machine performance and product flow control, Temposonics sensors offer:

- Superior accuracy with higher consistency between changeovers and reduced setup time
- Precise and repeatable positioning for smoother, more controlled motion
- Improved efficiency, yield, and throughput while maintaining quality

Other Application Examples

MTS Sensors Continue to Provide More Application Solutions

Where ever demanding performance is required, Temposonics sensor's provide the trusted solution. A wide range of industries and automation processes that rely on Temposonics state-of-the-art technology is continuously increasing.

- Assembly automation
- Primary metal production
- Paper and textiles
- Robotics
- Glass cutting
- Food and beverage
- Adhesive dispensing
- Material handling and packaging
- Test & measurement
- Wind turbines
- Medical equipment
- Power generation
- Control systems

MTS SENSORS

R-SERIES

Smart sensor models for fast, high precision and synchronized position control applications

	Model RH	Model RP	Model RF	Model RD4
	Rod style housing for use in hydraulic/ pneumatic cylinders	Aluminum extrusion profile housing easily mounts on machine surface	Flexible rod housing for mounting along an arc or for limited installation space	Rod style housing with detached electronics and mounting block. Ideal for use in clevis mounted cylinders.
OUTPUT	**Voltage:** 0 to 10 Vdc, 10 to 0 Vdc, -10 to +10 Vdc, +10 to -10 Vdc Additional output ranges available between -10 and +10 Vdc			
	Current: 4 to 20 mA, 20 to 4 mA Additional output ranges available between 0 and 20 mA.			
	SSI (Synchronous Serial Interface): Gray or binary format, data length selectable, synchronous / asynchronous measurement, optional parity and error bit.			
	Fieldbus: CANbus, DeviceNet, Profibus-DP, EtherCAT® and EtherNet/IP			
MEASURING RANGE	25 to 7,620 mm (1 to 300 in.)	25 to 5,080 mm (1 to 200 in.)	250 to 10,060 mm (10 to 396 in.) Contact factory for longer lengths.	25 to 5,080 mm (1 to 200 in.)
RESOLUTION	**Voltage and Current:** 16 Bit, 0.0015%			
	Digital: SSI; 0.5 µm (0.00002 in.), **Profibus, EtherCAT® and EtherNet/IP**; 1 µm (0.00004 in.), **CANbus, DeviceNet**; 2 µm (0.00008 in.).			
FEATURES	**Position + Velocity Measurement (see data sheets)**			
	Simultaneous Multi-Position Measurements: • **Voltage or Current;** 2 positions • **Profibus, CANbus, EtherCAT, EtherNet/IP**; up to 20 positions • **SSI:** 2 magnet differential			
	Handheld programmers and PC programming kits allow adjustment of the measurement stroke length and sensor parameters.			
DIAGNOSTICS	Sensor LEDs indicate sensor status, field bus activity and diagnostics.			

CUSTOM AND SPECIAL FUNCTION SENSORS (REFER TO WWW.MTSSENSORS.COM)

MODEL GB SENSOR	MODEL MH SENSOR	C-SERIES MODELS CS/CM SENSORS	MODEL GT REDUNDANT	C-SERIES WITH R HOUSING OPTION

MTS SENSORS

R-Series Analog

R-Series Models RP and RH
Analog Outputs (Voltage/Current)

Data Sheet

Document Part Number
550992 Revision E

Model RP Profile-style position sensor

Model RH Rod-style position sensor

FEATURES

- Linear, Absolute Measurement
- LEDs For Sensor Diagnostics
- Non-Contact Sensing Technology
- Linearity Deviation Less Than 0.01%
- Repeatability Within 0.001%
- Direct Analog Outputs (Voltage or Current)
- Single or Dual Channel Outputs (Position + Speed)

BENEFITS

- Rugged Industrial Sensor
- Dual Magnet Position Measurement
- 100% Field Adjustable Null And Span Setpoints

APPLICATIONS

- Continuous Operation In Harsh Industrial Conditions
- High Pressure Conditions
- For Accurate, Dual-Magnet Position Measurement

TYPICAL INDUSTRIES

- Fluid Power
- Factory Automation
- Material Handling and Packaging
- Woodworking, Metalworking and Assembly Tools
- Plastic Injection and Blow Molding

ISO 9001 CERTIFIED CE

R-Series Models RP and RH Sensors
Product Overview and Specifications

Product overview

R-Series model RH and RP sensors are extremely robust and are ideal for continuous operation under harsh industrial conditions. MTS offers two standard sensor housings, rod and profile extrusion. The rod housing is capable of withstanding high pressures such as those found in hydraulic cylinders. The profile extrusion housing provides convenient mounting options and captive sliding magnets which utilize slide bearings of special material that reduce friction, and help mitigate dirt build up. The sensor head contains the active signal conditioning and a complete integrated electronics interface. Double shielding is used to ensure EMI protection for unsurpassed reliability and operating safety.

Product specifications

Parameters	Specifications
OUTPUT	
Measured output variables:	Position + speed (magnitude) or velocity (with direction) for single or dual magnets
Resolution:	**Position measurement:** 16 bit; 0.0015% (minimum 1 µm) **Speed measurement:** 0.1 mm/s
Linearity deviation:	< ± 0.01% full stroke (minimum ± 50 µm)
Repeatability:	< ± 0.001% full stroke (minimum ± 2.5 µm)
Hysteresis:	< 4 µm
Analog Outputs:	**Voltage:** 0 to 10, 10 to 0, -10 to +10, +10 to -10 Vdc (minimum controller load >5k ohms) **Current:** 4(0) to 20 mA, 20 to 4(0) mA (minimum/maximum load 0/500 ohms)
Stroke lengths:	**Range (Profile style):** 25 to 5080 mm (1 to 200 in.) **Range (Rod style):** 25 to 7620 mm (2 to 300 in.) **Update times:** 0.5 ms up to 1200 mm, 1.0 ms up to 2400 mm, 2.0 ms up to 4800 mm, 5.0 ms up to 7620 mm stroke length
Speed measurement:	**Range:** 0.025 - 10 m/s (1.0 - 400.0 in./s) **Deviation:** <0.5% **Resolution:** 0.1 mm/s (0.004 in./s) **Update time:** Refer to update times in *'Position measurement'* above
ELECTRONICS	
Operating voltage:	**+24 Vdc nominal:** -15% or +20% **Polarity protection:** up to -30 Vdc **Over voltage protection:** up to 36 Vdc **Current drain:** 100 mA typical **Dielectric withstand voltage:** 500 Vdc (DC ground to machine ground)
Setpoints:	**Setpoint adjustment (Null/Span):** 100% of electrical stroke length. 25 mm (0.98 in.) min. distance between setpoints. **For dual-magnet outputs:** 76 mm (3 in.) min. distance between magnets

Parameters	Specifications
ENVIRONMENTAL	
Operating conditions:	**Operating temperature:** -40 °C (-40 °F) to +75 °C (+167 °F) **Relative humidity:** 90% no condensation **Temperature coefficient:** < 30 ppm/ °C
EMC test:	**Electromagnetic emission:** IEC/EN 50081-1 **Electromagnetic susceptibility:** IEC/EN 50082-2, IEC/EN 61000-4-2/3/4/6, level 3/4 criterium A, CE qualified
Shock rating:	100 g (single hit)/ IEC standard 68-2-27 (survivability)
Vibration rating:	15 g (30 g with HVR option)/10 to 2000 Hz, IEC standard 68-2-6 (operational)
WIRING	
Connection type:	6-pin male D60 (M16) connector or integral cable
PROFILE STYLE SENSOR (MODEL RP)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connector/cable exit)
Sealing:	IP 65
Sensor extrusion:	Aluminum (Temposonics profile style)
Mounting:	Any orientation. Adjustable mounting feet or T-slot nut (M5 threads) in bottom groove
Magnet types:	Captive-sliding magnet or open-ring magnet
ROD STYLE SENSOR (MODEL RH)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connector/cable exit)
Sealing:	IP 67 or IP 68 for integral cable models
Sensor rod:	304L stainless steel
Operating pressure:	350 bar static, 690 bar peak (5000 psi static, 10,000 psi peak)
Mounting:	Any orientation. Threaded flange M18 x 1.5 or 3/4 - 16 UNF-3A
Typical mounting torque:	45 N-m (33 ft. - lbs.)
Magnet types:	Ring magnet, open-ring magnet, or magnet float

Output options

R-Series analog sensors provide single or dual-magnet sensor options along with single or dual-channel outputs *(see 'Figure 1')*.

The R-Series analog sensor can be ordered for single-position magnet applications which provide one position output, and/or one velocity output over the active stroke length.

The R-Series sensor can also be ordered for dual-position magnet applications which provide two position outputs, or two velocity outputs, or one of each.

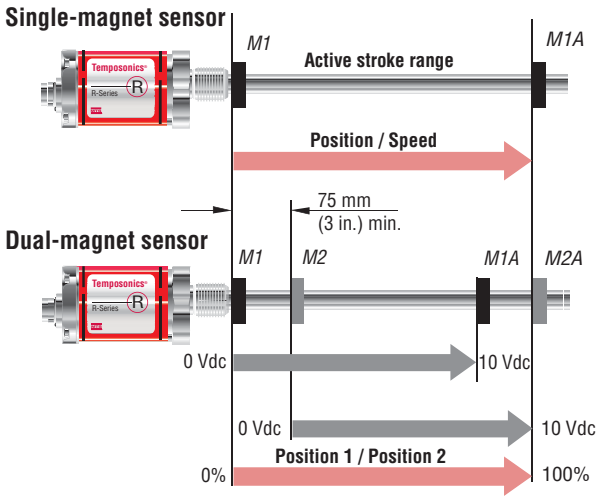

Figure 1. Single and dual-magnet output diagram

When using dual magnets, the minimum allowed distance between the magnets is 75 mm (3 in.) to maintain proper sensor output.

Enhanced monitoring and diagnostics

SENSOR STATUS AND DIAGNOSTIC DISPLAY

Diagnostic LEDs (green/red), located beside the connector or cable exit *(see 'Figure 2')*, provide basic visual monitoring for normal sensor operation and troubleshooting. Diagnostic display LEDs indicate four modes described in *'Table 1'*.

Figure 2. R-Series sensor diagnostic LEDs

Green	Red	Operation status/mode
ON	OFF	Normal function (operation mode)
ON	Flashing	Magnet out of setup range
ON	ON	Magnet not detected or wrong quantity of magnets
Flashing	ON	Programming mode

Table 1. Diagnostic LED codes

Advanced communication and programmability

SENSOR FIELD PROGRAMMING

Temposonics R-Series Analog sensors are pre-configured at the factory by model number designation. For many applications, normal sensor installation and operation does not require additional adjustment. If however, sensor parameter changes are required in the field, the *'R-Series Analog PC Programming Kit, part no. 253309-1' (see 'Figure 3')* can be used to easily program the sensor electronically without opening the sensor's housing.

Field programming to adjust the output values is available for any setting needed, within the selected output range. Each sensor's output range is selected from the available options when ordering a particular sensor model number. There are six different manufacturing build types available, three single channel and three dual channel outputs in various ranges as described below:

Single-channel output for either position or speed:

- Voltage output between 0 and +10 volts
- Voltage output between -10 and +10 volts
- Current output between 0 (or 4) and 20 mA

Dual-channel outputs for position and/or speed:

- Voltage outputs between 0 and +10 volts
- Voltage outputs between -10 and +10 volts
- Current outputs between 0 (or 4) and 20 mA

Field Programming Notes:

Field programming allows for numerous custom sensor configurations, however, please note that field programming can not be used to change the R-Series Analog sensor from one manufacturing build type to another.

Field programming (output voltages):

1. Sensor models ordered with *one output channel* can not be reprogrammed in the field to provide a second output channel.
2. Sensor models ordered with *positive only output voltages* can not be reprogrammed in the field to include negative output voltages.
3. Sensor models ordered with *both positive and negative output voltages* can be reprogrammed in the field for positive only voltages, or negative only voltages. However, resolution is then reduced.

Figure 3. R-Series Analog PC Programming Kit, Part no. 253309-1 (For single or dual magnet sensor applications)

Advanced communication and programmability

SENSOR FIELD PROGRAMMING

R-Series Analog PC Programming Kit (Part no.: 253309-1) includes the following components:

- Wall adapter style power supply (24 Vdc output)
- USB Serial converter box with USB cable to connect to PC
- Two connection cables:
  - Cable with connector if sensor is ordered with the D60 integral connector option.
  - Cable with quick connects if sensor is ordered with the integral cable option.
- R-Series Analog PC Setup software, on CD-ROM (for Windows XP or higher)

The R-Series Analog PC Setup software user-friendly interface *(see 'Figure 4')* enables the operator to take advantage of customizing the following settings:

- Magnet positions and sensor output values for Setpoint 1 *(Null)* and Setpoint 2 *(Span)* for single or dual magnets. For additional information about setpoints, refer to section *'R-Series analog handheld programmer for single-magnet sensors'*.
- Output range settings for speed, or for speed with direction.
- Assign position or velocity output functions for the single or dual magnets, and for the one or two output channels. Output function assignments are limited to the manufacturing build type of the sensor.
- Assign error output values when the magnet moves beyond the programmed setpoints.

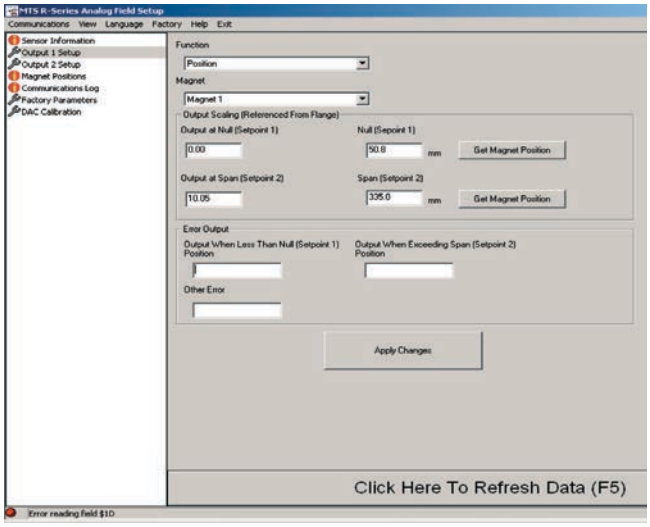

Figure 4. R-Series PC Setup software interface

R-SERIES ANALOG HANDHELD PROGRAMMER FOR SINGLE MAGNET SENSOR APPLICATIONS

The R-Series Analog Handheld Programmer *(shown in Figure 5)* can be used to program the magnet positions for the start of output, (0% = 0 Vdc, -10 Vdc, 4 mA, or 0 mA), and the end of output, (100% = 10 Vdc or 20 mA), for the single magnet version of the R-Series analog sensor.

Figure 5. R-Series Analog Handheld Programmer, Part no.: 253124

Standard factory settings place the setpoint 1 *'Null'* and setpoint 2 *'Span'* at the limits of the sensor's active stroke range. For example, a sensor ordered with 4 - 20 mA output will be factory set for 4 mA output at the bottom limit of the stroke range at the *'Null'* position. Likewise, the 20 mA output will be factory set at the top limit of the stroke range at the *'Span'* position.

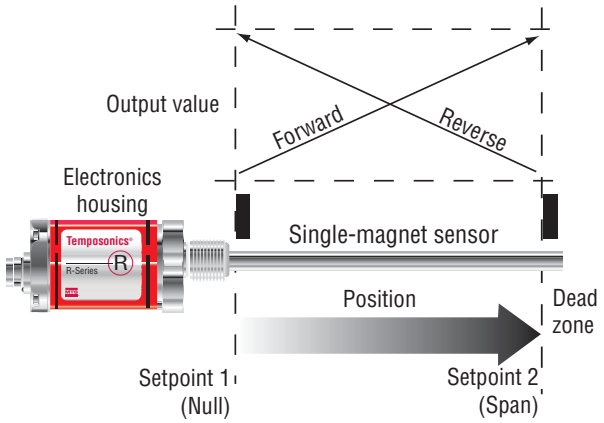

Figure 6. Standard factory settings

Setpoint 1 and setpoint 2 can be re-positioned for the actual measuring length needed anywhere within the active stroke range.

Note:

The minimum distance allowed between setpoint 1 and setpoint 2 is 25 mm (0.98 in.).

These adjustments are easily performed, even when the sensor is not directly accessible, by connecting the analog handheld programmer to the sensor's integral cable or extension cable.

When programming new setpoints, the R-Series Analog Handheld Programmer adjusts the sensor output values to either 0% or 100% at the two selected magnet positions. To program other setpoint output values, use the *'R-Series Analog PC Programming Kit' (Part no.: 253309-1)*.

Note:

The R-Series Analog Handheld Programmer can also be used to change the output direction from forward-acting (e.g. 4 - 20 mA output) to reverse-acting (20 - 4 mA output), as well as, reverse-acting to forward-acting.

R-SERIES ANALOG CABINET PROGRAMMER FOR SINGLE MAGNET SENSORS

The R-Series Analog Cabinet Programmer *(see 'Figure 7')* provides the same programming functions as the R-Series Analog Handheld Programmer and is designed to mount in a control cabinet. The R-Series Analog Cabinet Programmer includes a rear snap-in mounting feature that allows the unit to mount on standard 35 mm DIN rail.

After installation, the programmer can remain wired up to both the sensor and PLC interface module if reprogramming or a different machine setup is later required, a built-in *'Program/Run'* switch allows this programmability.

Figure 7. R-Series Analog Cabinet Programmer (two shown) , Part no.: 253408 (for single-magnet sensor applications)

Standard magnet selections, mounting and installation (Model RP)

SELECTION OF POSITION MAGNETS (ONE MAGNET INCLUDED WITH MODEL RP SENSOR)

Temposonics Model RP profile-style sensors offer two basic mounting methods; side grooves for use with mounting feet or a bottom groove that accepts special T-Slot nuts. Both the mounting feet and T-Slot nuts can be positioned along the sensor extrusion to best secure the sensor for each particular application.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

R-Series Model RH Rod-Style Sensor
Dimension References

Model RH rod-style sensor dimension references

The Temposonics R-Series rod-style sensor (Model RH) offers modular construction, flexible mounting configurations, and easy installation. The Model RH sensor is designed for mounting in applications where high pressure conditions exist, (5000 psi continuous, 10,000 psi spike), such as inside hydraulic cylinders. The Model RH sensor may also be mounted externally in many applications.

Stroke-dependent Dead Zones:	
Stroke length:	**Dead zone:**
25 mm (1 in.) - 5000 mm (197 in.)	63.5 mm (2.5 in.)
5005 mm (197.1 in.) - 7620 mm (300 in.)	66 mm (2.6 in.)

MODEL RH, ROD-STYLE SENSOR WITH RING MAGNET (MAGNET ORDERED SEPARATELY)

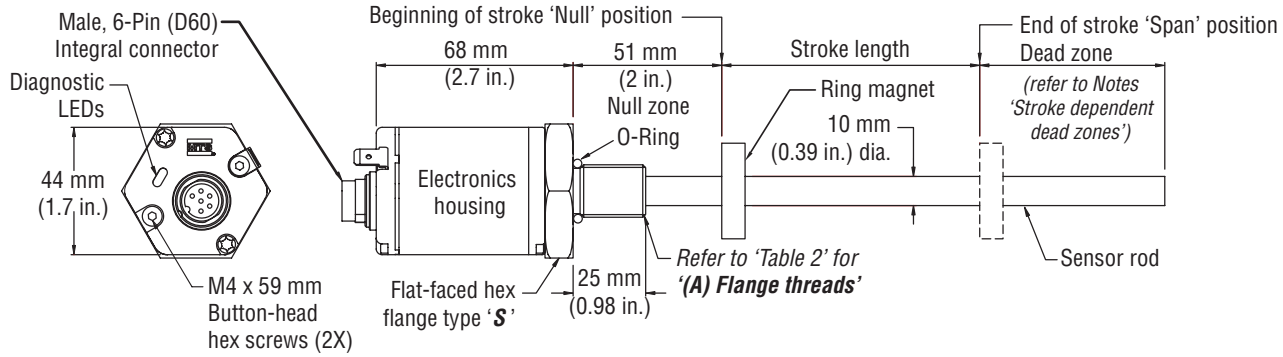

Figure 10. Model RH Rod-style sensor dimension reference (shown with the ***D60*** integral connection)

MODEL RH, ROD-STYLE SENSOR WITH 6-PIN DIN MATING CABLE CONNECTOR (MAGNET ORDERED SEPARATELY)

Drawing is for reference only, contact applications engineering for tolerance specific information.

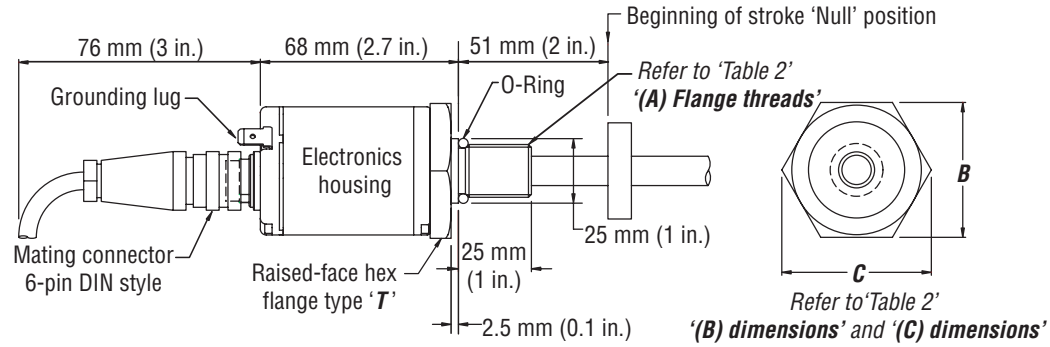

Figure 11. Model RH Rod-style sensor dimension reference (shown with mating cable connector)

Housing style Flange type	Description	(A) Flange threads	(B) Dimensions	(C) Dimensions
T	US customary threads with raised-face flange	3/4" - 16 UNF-3A	1.75 in.	2 in.
S	US customary threads with flat-faced flange	3/4" - 16 UNF-3A	1.75 in.	2 in.
M	Metric threads with flat-faced flange	M18 x 1.5	46 mm	53 mm

Table 2. Model RH Rod-style sensor housing style and flange type references

Standard magnet selections, mounting and installation (Model RH)

Magnets must be ordered separately with Model RH position sensors. The standard ring magnet (part number 201542-2) is suitable for most applications.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Models RP and RH connections and wiring

STANDARD MALE (D60) 6-PIN DIN INTEGRAL CONNECTOR (M16)

Note:

When using the single channel output, (pins 1 and 2), the unused pins for output 2 (pins 3 and 4) should be left floating (unconnected), unless sensor programming is being performed.

Male, 6-pin (D60) integral connector pin-out as viewed from the end of the sensor

Pin number	Wire color	Function / Analog outputs
1	Gray	Output 1/ Position 1: 0 to 10, 10 to 0, -10 to +10, +10 to -10 Vdc 4 to 20 , 20 to 4, 0 to 20, 20 to 0 mA (Required for programming mode / 0% setting)
2	Pink	Return for pin 1
3	Yellow	Output 2/ Position 2 or Speed: 0 to 10, 10 to 0, -10 to +10, +10 to -10 Vdc 4 to 20, 20 to 4, 0 to 20, 20 to 0 mA (Required for programming mode / 100% setting)
4	Green	Return for pin 3
5	Red or Brown	+24 Vdc (-15/+20%) (Required for programming mode)
6	White	DC ground (for supply) (Required for programming mode)

Models RP and RH Sensors
Ordering Information

R																		
												(3 to 7 digit code, defined by the output option selected)						
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19

SENSOR MODEL = R [ ] 1-2

RP = Profile style

RH = Hydraulic rod style

HOUSING STYLE = [ ] 3

Model RP profile-style sensor (includes one magnet):

S = Captive-sliding magnet with ball joint at top (part no. 252182)

V = Captive-sliding magnet with ball joint at front (part no. 252184)

M = Open-ring magnet (part no. 251416-2)

Model RH rod-style sensor (magnet(s) must be ordered separately):

T = US customary threads, raised-faced flange and pressure tube, standard

U = Same as option "T", except uses fluoroelastomer seals for the electronics housing

B = Sensor cartridge only (no flange and pressure tube, stroke length < 1830 mm (72 in.))

S = US customary threads, flat-faced flange and pressure tube, standard

H = Same as option "S", except uses fluoroelastomer seals for the electronics housing

M = Metric threads, flat-faced flange and pressure tube, standard

V = Same as option "M", except uses fluoroelastomer seals for the electronics housing

STROKE LENGTH = [ ][ ][ ][ ][ ] 4-8

_ _ _ _ M = Millimeters *(Encode in 5 mm increments)*

_ _ _ . _ U = Inches and tenths *(Encode in 0.1 in. increments)*

Stroke Length Notes:

1. Profile-style sensor (model RP) stroke range = 25 mm (1 in.) - 5080 mm. (200 in.)
2. Rod-style sensor (model RH) stroke range = 25 mm (1 in.) - 7620 mm (300 in.)

CONNECTION TYPE = [ ][ ][ ] 9-11

Integral connector:

D60 = 6-pin DIN (M16), male, standard

Integral cables:

R _ _ = Integral cable, PVC jacket, pigtail termination, standard

F _ _ = Integral cable, black polyurethane jacket with pigtail termination

Cable length:
Encode in feet if using US customary stroke length
Encode in meters if using metric stroke length

→ **_ _** = 3 (**03**) to 98 (**98**) ft. *or* 1 (**01**) to 30 (**30**) meters.

Cable Length Note:

MTS recommends the maximum integral cable length to be 10 meters (33 ft.). Cables greater than 10 m (33 ft.) in length are available, however, proper care must be taken during handling and installation.

INPUT VOLTAGE = [ ] 12

1 = +24 Vdc (+20% - 15%)

A = Same as option "1" except includes the High Vibration-Resistant (HVR) option for Model RH only, limited to stroke range = 50 mm (2 in.) - 2000 mm (78.7 in.), Refer to *'HVR Option Note'*.

HVR Option Note:

The High Vibration-Resistant (HVR) option provides the model RH rod-style sensors with increased resistance to shock and vibration for use in heavy duty machinery. Refer to "G-Series and R-Series Sensors for High Shock and Vibration Applications", document part no.: 551073 for more information.

OUTPUT *(13 - 19)* = [ ][ ][ ][ ][ ][ ][ ] 13-19

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19

2 Output channels with 2 magnets (3 digit code) = ☐☐☐ **13 - 15**

Choose a value described below to encode 3 digits (sensor part number boxes 13-15) refer to 'Setpoint Note'

	Output #1 = Magnet #1 position	Output #2 = Magnet #2 position
V02	0 to +10 Vdc	0 to +10 Vdc
V12	+10 to 0 Vdc	+10 to 0 Vdc
V22	-10 to +10 Vdc	-10 to +10 Vdc
V32	+10 to -10 Vdc	+10 to -10 Vdc
A02	4 to 20 mA	4 to 20 mA
A12	20 to 4 mA	20 to 4 mA
A22	0 to 20 mA	0 to 20 mA
A32	20 to 0 mA	20 to 0 mA

Setpoint Note:

Standard factory settings for the setpoint positions are the same for both magnets, i.e. both magnets have setpoint 1 at the Null position, and setpoint 2 at the Span position. If needed, the setpoint positions for each magnet can be reprogrammed in the field to best fit the application, (see page 4 for more information). For proper sensor output, the minimum allowed distance between magnets is 3 in. (75 mm).

2 Output channels with 1 magnet (7 digit code) = ☐☐☐☐☐☐☐ **13 - 19**

(Choose a maximum speed value described below in Table 3 to encode all 7 digits (sensor part number boxes 13 - 19)

	Output #1 = Magnet position	Output #2 = Speed magnitude		
V01 ____	0 to +10 Vdc	+10 (towards head)	0 (at rest)	+10 (towards tip) Vdc

A51 ____	20 to 4 mA	20 (towards head)	12 (at rest)	4 (towards tip) mA
	Output #1 = Magnet position (forward-acting)	**Output #2 = Magnet position (reverse-acting)**		
V03	0 to +10 Vdc *(3 digit code)*	+10 to 0 Vdc		

TABLE 3. FOR SENSOR MODELS WITH SPEED OUTPUT

(Choose a maximum speed value described below to encode the last 4 digits (sensor part number boxes 16-19)

For US customary stroke lengths, encode speed for in./s.

____ = Speed output maximum
Available range for US customary stroke lengths is 1.0 to 400.0 in./s, (0010 … 4000)

Example:
Maximum speed of 12.0 in./s, and output produced for velocity = [-10(towards head) … 0(at rest) … +10(towards tip) Volts]
Encode: **V 6 1 0 1 2 0** *or* **V 8 1 0 1 2 0**

For metric stroke lengths, encode speed for m/s *(range #1)* **or mm/s** *(range #2)* **using the information provided below:**

Speed range #1, (0 ___ . ___)

0 ___ . ___ = Speed output maximum
Speed range #1 for metric stroke lengths is 0.1 to 10.0 m/s, (0001 … 0100)

Example:
Maximum speed of 5.5 m/s, and output produced for speed = [+10(towards head) … 0(at rest) … +10(towards tip) Volts],
Encode: **V 0 1 0 0 5 5**

Speed range #2, (1 ___ ___ ___)

1 ___ ___ ___ = Speed output maximum.
Speed range #2 for metric stroke lengths is 25 to 90 mm/s, (1025 … 1090)

Example:
Maximum speed of 50 mm/s, and output produced for velocity = [4(towards head) … 12(at rest) … 20(towards tip) mA]
Encode: **A 4 1 1 0 5 0**

Magnetostrictive, Absolute, Non-contact
Linear-Position Sensors

MTS SENSORS

R-Series Models RP and RH

Synchronous Serial Interface (SSI) Output

Data Sheet

Document Part Number
550989 Revision E

R-Series SSI

Model RP Profile-style position sensor

Model RH Rod-style position sensor

FEATURES

- Linear, Absolute Measurement
- LEDs For Sensor Diagnostics
- Non-Contact Sensing Technology
- Linearity Deviation Less Than 0.01%
- Repeatability Within 0.001%
- Direct 24/25/26 Bit SSI Output, Gray/Binary Formats
- Synchronous Measurement for Accurate Velocity/Acceleration Calculations

BENEFITS

- Superior Accuracy; Resolution Down to 0.5 Micron
- Rugged Industrial Sensor
- High-Speed Update Options
- Linearity Correction Options
- Velocity Output Option
- Optional Differential Measurement Between Two Magnets

APPLICATIONS

- Continuous Operation In Harsh Industrial Conditions
- High Pressure Conditions
- For Fast, Precision Motion Control

TYPICAL INDUSTRIES

- Factory Automation
- Fluid Power
- Plastic Injection and Blow Molding
- Material Handling and Packaging
- Woodworking, Metalworking and Machine Tools

ISO 9001 CERTIFIED

CE

Product overview

R-Series model RP and RH sensors are extremely robust and are ideal for continuous operation under harsh industrial conditions. MTS offers two standard sensor housings, rod and profile extrusion. The rod housing is capable of withstanding high pressures such as those found in hydraulic cylinders. The profile extrusion housing provides convenient mounting options and captive-sliding magnets which utilize slide bearings of special material that reduce friction, and help mitigate dirt build up. The sensor head contains the active signal conditioning and a complete integrated electronics interface. Double shielding is used to ensure EMI protection for unsurpassed reliability and operating safety.

Product specifications

Parameters	Specifications
OUTPUT	
Measured output variables:	Position, or position difference between 2 magnets, or velocity, internal temperature
Resolution:	0.5 µm, 1 µm, 2 µm, 5 µm, 10 µm, 20 µm, 50 µm, 100 µm
Update Rate	
Measuring length:	300 750 1000 2000 5000 mm
Measurements/Sec:	3.7 3.0 2.3 1.2 0.5 kHz *(Up to 10 kHz for high-speed update option)*
Linearity deviation:	< ± 0.01% full stroke, (minimum ± 40 µm) *(Linearity Correction Option (LCO) available)*
Repeatability:	< ± 0.001% full stroke (minimum ± 2.5 µm)
Hysteresis:	< 4 µm (2 µm is typical)
Outputs:	**Interface:** Synchronous Serial Interface (SSI) (RS-422 type differential signal pairs) **Data format:** Binary or gray, optional parity and error bit, optional internal temperature. **Data length:** 8 to 32 bit **Data speed (Baud rate):** 70 kBd* to 1 MBd, depending on cable length (see below):
Length:	<3 <50 <100 <200 <400 m
Baud rate:	1.0 MBd <400 kBd <300 kBd <200 kBd <100 kBd
Stroke length:	**Range (Profile style):** 25 to 5080 mm (1 to 200 in.) **Range (Rod style):** 25 to 7620 mm (1 to 300 in.)
Distance between magnets:	75 mm (3 in.) Minimum for 2 magnet differential output * *With standard monoflop of 16 µs*
ELECTRONICS	
Operating voltage:	**+24 Vdc nominal:** -15% or +20% **Polarity protection:** up to -30 Vdc **Overvoltage protection:** up to 36 Vdc **Current drain:** 100 mA typical **Dielectric withstand voltage:** 500 Vdc (DC ground to machine ground)

Parameters	Specifications
ENVIRONMENTAL	
Operating conditions:	**Operating temperature:** -40 °C (-40 °F) to +75 °C (+167 °F) **Relative humidity:** 90% no condensation **Temperature coefficient:** < 15 ppm/ °C
EMC test:	**Electromagnetic emission:** IEC/EN 50081-1 **Electromagnetic susceptibility:** IEC/EN 50082-2, IEC/EN 61000-4-2/3/4/6, level 3/4 criterium A, CE qualified
Shock rating:	100 g (single hit)/ IEC standard 68-2-27 (survivability)
Vibration rating:	15 g (30 g with HVR option)/ 10 to 2000 Hz, IEC standard 68-2-6 (operational)
WIRING	
Connection type:	7-pin male D70 (M16) connector, 10-pin male MS connector or integral cable
PROFILE STYLE SENSOR (MODEL RP)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connector/ cable exit)
Sealing:	IP 65
Sensor extrusion:	Aluminum (Temposonics profile style)
Mounting	Any orientation. Adjustable mounting feet or T-slot nut (M5 threads) in bottom groove
Magnet types:	Captive-sliding magnet or open-ring magnet
ROD STYLE SENSOR (MODEL RH)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connector/ cable exit)
Sealing:	IP 67 or IP 68 for integral cable models
Sensor rod:	304L stainless steel
Operating pressure:	350 bar static, 690 bar peak (5000 psi, 10,000 psi peak)
Mounting:	Any orientation. Threaded flange M18 x 1.5 or 3/4 - 16 UNF-3A
Typical mounting torque:	45 N-m (33 ft. - lbs.)
Magnet types:	Ring magnet, open-ring magnet, or magnet float

Synchronous Serial Interface (SSI)

Temposonics R-Series sensors with SSI fulfill all requirements of the SSI standard for an absolute encoder. The position value is encoded in a 24/25/26 code format and is transmitted at high speed in SSI standard format to the control device. The main feature of SSI is the synchronized data transfer. Data transfer synchronization simplifies the closed-loop control system.

A clock pulse train from a controller is used to gate out sensor data. One bit of position data is transmitted to the controller for each clock pulse received by the sensor *(see 'Figures 1 and 2')*. The absolute position data is continually updated by the sensor and converted by the shift register into serial information. *(see 'Figure 2')*.

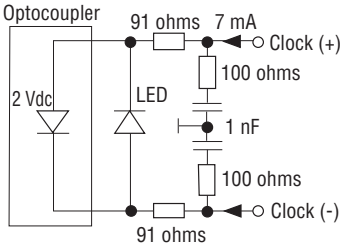

Figure 1. Sensor input

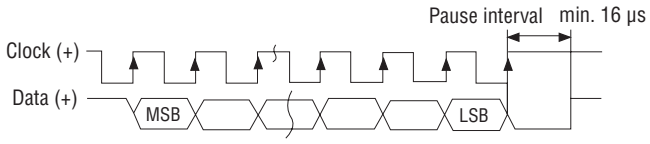

Figure 2. Timing Diagram

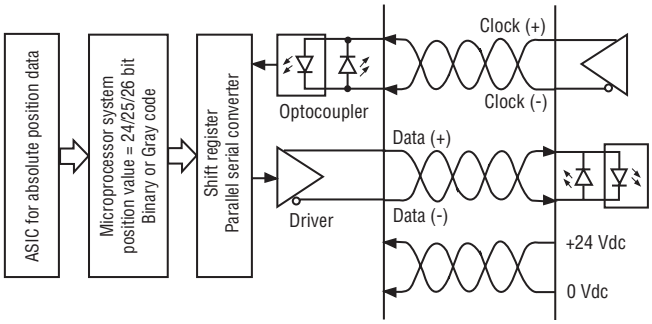

Figure 2. Logic Diagram

Measuring modes

THE SENSOR MEASUREMENT CYCLE

For all Temposonics position sensors, the measurement cycle begins with a very short electrical current pulse being applied to the sensor's waveguide. This is called the 'interrogation pulse'. It creates a magnetic field that interacts with another magnetic field emanating from the position magnet. This interaction produces the magnetostrictive effect and results in a localized mechanical strain in the sensor's waveguide. When the interrogation pulse ends, the strain is suddenly released, sending a rotational sonic strain pulse down the waveguide. The measurement cycle ends when the sonic strain pulse arrives at the end of the waveguide and is detected by the sensor's electronics. By accurately measuring the travel time of the sonic strain pulse the magnet's precise position is determined.

ASYNCHRONOUS MEASURING MODE

For the SSI sensor, the position data is always communicated to the controller or PLC using the Synchronous Serial Interface format. When the SSI sensor is operated as fast as possible, i.e. in Asynchronous Measuring Mode, the position data is updated and stored inside the sensor as quickly as the sensor's measurement cycle will allow. The minimum time for the measurement cycle is determined by the sensor's overall stroke length.

The controller's loop time will determine when the sensor's stored data is collected. For this mode the controller loop time is not synchronized with the sensor's measurement cycle time. However, if it is always slower than the sensor's cycle time then there will always be new position data available in the sensor's shift register, waiting to be clocked out over the SSI interface.

As shown in '*Figure 3*', although the sensor is updating the position data as fast as possible, the actual data values collected by the controller can have varying delay times. This is shown as the delays from when the magnet's position was captured, (at the instant the interrogation pulse had started the relevant measurement cycle), to when the data is delivered at the end of the controller loop cycle.

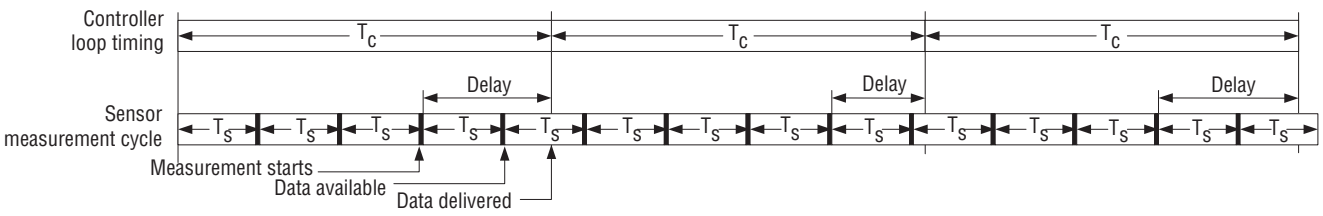

Figure 3. Asynchronous measuring mode, controller loop timing

SYNCHRONOUS MEASURING MODE ('SYNC 1' OPTION)

Using the Synchronous Measuring Mode, the Temposonics SSI sensor has timing capabilities to optimize the communication link to the controller. Many motion control applications require velocity and/or acceleration be calculated, and therefore, must rely on position data having minimal delay, and minimal timing variability. With the Synchronous Measuring Mode, MTS Sensors has developed a proprietary algorithm to not only guarantee true measurement synchronization but at the same time minimize any propagation delay relative to the controller loop rate.

First, the sensor quickly determines the controller's loop timing – typically after one stable cycle period. Once this is known, and determined to be repeatable to specified limits, the sensor knows exactly when data will be required. The sensor then determines when to start the next measurement cycle, delaying the interrogation pulse, so that the measurement cycle will complete just in time to deliver the freshest data possible when the controller makes the next request, *(see 'Figure 4')*.

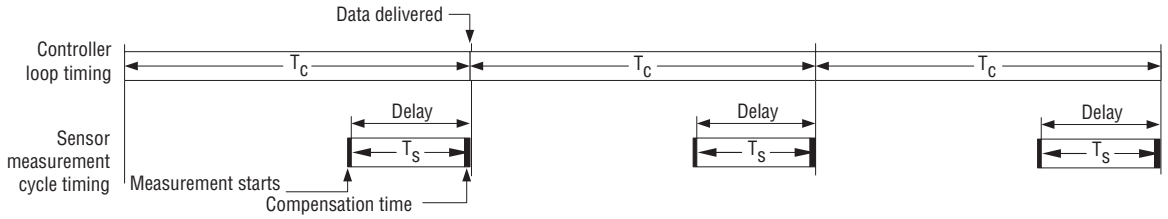

Figure 4. Synchronous measuring mode, Sync 1 option

This form of synchronization to the controller provides the high quality position data needed for complex motion control algorithms and for multiple axes machines requiring tight coordination. When developing applications that will use the Synchronous Measuring Mode, the designer must choose a controller or PLC input module that supports this mode.

Advanced output options

The Temposonics SSI sensor has advanced output options that are helpful for maximizing system performance in demanding applications requiring very high accuracy and speed.

ENHANCEMENTS FOR THE SYNCHRONOUS MEASURING MODE ('SYNC 2' & 'SYNC 3' OPTIONS)

The 'Sync 2' option provides a high speed update feature. When motion control applications require new position data faster than the sensor's measurement cycle time, the high speed update feature provides extrapolated data values, calculated on the fly. A prediction algorithm generates usable position data for delivery to the controller whenever the sensor has not yet completed the next measurement cycle. These extrapolated values are used by the controller as normally updated position data, allowing very fast controller loop times that are necessary for tight control of high speed applications.

The 'Sync 3' option provides an additional enhancement to the high speed update feature of Sync 2. For this mode the prediction algorithm is used for all of the sensor's position data to compensate for the inherent lag time due to the sensor's measurement cycle.

LINEARITY CORRECTION OPTION (LCO)

The Linearity Correction Option (LCO) provides improved sensor output accuracy. For most stroke lengths linearity accuracy is improved up to a factor of 5 resulting in deviations from actual position of less than +/- 20 microns (0.0008 in.). For stroke lengths over 5000 mm (197 in.), the linearity accuracy is improved up to a factor of 10. Selecting the sensor style and magnet is important (both must be matched together). Contact the factory for assistance when designing for the LCO in your application.

ERROR DELAY (SKIP FILTER)

For applications having very high shock and vibration levels that exceed the sensor specification ratings the Error Delay (Skip Filter) can be used to prevent errors being produced on some types of controllers. During these very high shock events the sensor may fail to capture the magnet return signal, and if so, will normally output a zero position value. The Error Delay will instead repeat the last good output value. For long duration shock events the Error Delay will continue to repeat the good output value up to the number of times selected.

NOISE REDUCTION FILTER

Complex systems can have various noise sources sometime significant enough to require filtering. If needed, a Simple Moving Average (SMA) filter function is available to reduce noise effects. The filter algorithm can be adjusted to include the last 2, 4, or 8 output values in the calculated average.

PEAK REDUCTION FILTER

A variation of the filter function is the Weighted Infinite Average (WIA) filter. If needed, this filter can provide a greater smoothing effect and has an adjustable weight parameter.

TEMPERATURE MONITORING

A temperature monitoring device is included inside the sensor electronics housing. Its output can be used to track the general operating conditions for the sensor and to monitor for over temperature. It cannot be used for calculating temperature compensation.

Enhanced monitoring and diagnostics

SENSOR STATUS AND DIAGNOSTIC DISPLAY

Diagnostic LEDs (green/red), located beside the connector or cable exit *(see 'Figure 5')*, provide basic visual monitoring for normal sensor operation and troubleshooting. Diagnostic display LEDs indicate four modes described in *'Table 1'*.

Figure 5. R-Series sensor Integrated diagnostic LEDs

Green	Red	Operation status/mode
ON	OFF	Normal function (operation mode)
ON	ON	Magnet not detected or wrong quantity of magnets
ON	Flashing	Sensor not synchronous *(For synchronous measurement mode only)*
Flashing	ON	Programming mode

Table 1. Diagnostic display indicator modes

Advanced communication and programmability

SENSOR FIELD PROGRAMMING

Temposonics R-Series sensors with SSI are pre configured at the factory by model number designation. In the event that sensor parameter changes are required in the field, the *'R-Series SSI PC Programming Kit, part no. 253310-1' (see 'Figure 6')* can be used to easily program the sensor electronically without opening the sensor's housing.

Figure 6. R-Series SSI PC Programming Kit, Part no. 253310-1

R-SERIES SSI PC PROGRAMMING KIT (PART NO.: 253310-1) INCLUDES THE FOLLOWING COMPONENTS:

- Wall adapter style power supply (24 Vdc output).
- USB Serial converter box with USB cable to connect to PC
- Two connection cables:
  - Cable with connector if sensor is ordered with the D70 integral connector option.
  - Cable with quick connects if sensor is ordered with the integral cable option.
- R-Series SSI PC Setup software, on CD-ROM (for Windows XP or higher)

The Utility software included in the R-Series SSI PC Setup software provides a user-friendly interface *(see 'Figure 7')*.

The setup software allows the following set of parameters to be field programmed.

FIELD PROGRAMMABLE PARAMETERS:

- Data length
- Data format
- Resolution
- Measuring direction
- Synchronous / asynchronous measurement
- Measurement filter

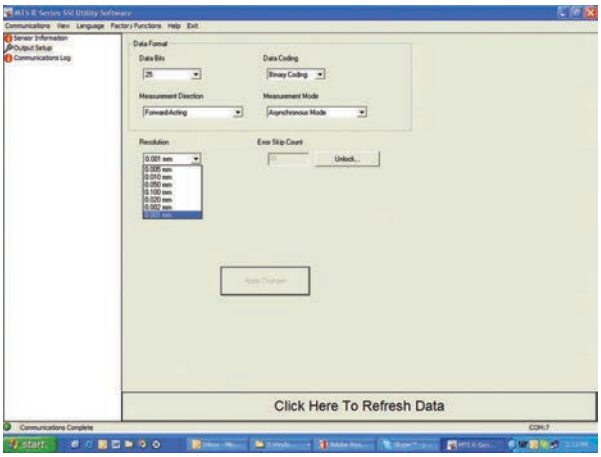

Figure 7. R-Series SSI PC Setup software interface

Standard magnet selections, mounting and installation (Model RP)

SELECTION OF POSITION MAGNETS (ONE MAGNET INCLUDED WITH MODEL RP SENSOR)

Temposonics Model RP profile-style sensors offer two basic mounting methods; side grooves for use with mounting feet or a bottom groove that accepts special T-Slot nuts. Both the mounting feet and T-Slot nuts can be positioned along the sensor extrusion to best secure the sensor for each particular application.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Model RH rod-style sensor dimension references

The Temposonics R-Series rod-style sensor (Model RH) offers modular construction, flexible mounting configurations, and easy installation. The Model RH sensor is designed for mounting in applications where high pressure conditions exist, (5000 psi continuous, 10,000 psi spike), such as inside hydraulic cylinders. The Model RH sensor may also be mounted externally in many applications.

Stroke-dependent Dead Zones:	
Stroke length:	**Dead zone:**
25 mm (1 in.) - 5000 mm (197 in.)	63.5 mm (2.5 in.)
5005 mm (197.1 in.) - 7620 mm (300 in.)	66 mm (2.6 in.)

MODEL RH, ROD-STYLE SENSOR WITH RING MAGNET (MAGNET ORDERED SEPARATELY)

SENSOR MODEL = R [ ] 1-2

RP = Profile style

RH = Hydraulic rod style

HOUSING STYLE = [ ] 3

Model RP profile-style sensor (includes one magnet):

S = Captive-sliding magnet with ball joint at top (part no. 252182)

V = Captive-sliding magnet with ball joint at front (part no. 252184)

M = Open-ring magnet (Part no. 251416-2)

Model RH rod-style sensor (magnet(s) must be ordered separately):

T = US customary threads, raised-faced flange and pressure tube, standard

U = Same as option 'T', except uses fluoroelastomer seals for the electronics housing

B = Sensor cartridge only (no flange and pressure tube, stroke length < 1830 mm (72 in.))

S = US customary threads, flat-faced flange and pressure tube, standard

H = Same as option 'S', except uses fluoroelastomer seals for the electronics housing

M = Metric threads, flat-faced flange and pressure tube, standard

V = Same as option 'M', except uses fluoroelastomer seals for the electronics housing

STROKE LENGTH = [ ][ ][ ][ ][ ] 4-8

_ _ _ _ M = Millimeters *(Encode in 5 mm increments)*

_ _ _ . _ U = Inches and tenths *(Encode in 0.1 in. increments)*

Stroke Length Notes:

1. Profile-style sensor (model RP) stroke range = 25 mm (1 in.) - 5080 mm. (200 in.)
2. Rod-style sensor (model RH) stroke range = 25 mm (1 in.) - 7620 mm (300 in.

CONNECTION TYPE = [ ][ ][ ] 9-11

Integral connector:

D70 = 7-pin DIN (M16), male, standard

MS0 = 10-Pin MS style, male

Integral cables:

P _ _ = Integral high-performance cable, orange jacket with pigtail termination

E _ _ = Integral cable, PVC jacket, pigtail termination, standard

F _ _ = Integral cable, black polyurethane jacket with pigtail termination

Cable length:
Encode in feet if using US customary stroke length
Encode in meters if using metric stroke length

_ _ = 3 (**03**) to 98 (**98**) ft. *or* 1 (**01**) to 30 (**30**) meters.

Cable Length Note:

MTS recommends the maximum integral cable length to be 10 meters (33 ft.). Cables greater than 10 m (33 ft.) in length are available, however, proper care must be taken during handling and installation.

INPUT VOLTAGE = [ ] 12

1 = +24 Vdc (+20% - 15%)

A = Same as option "1" except includes the High Vibration-Resistant (HVR) option for Model RH only, limited to stroke range = 25 mm (1 in.) - 2000 mm (78.7 in.), Refer to *'HVR Option Note'*.

HVR Option Note:

The High Vibration-Resistant (HVR) option provides the model RH rod-style sensors with increased resistance to shock and vibration for use in heavy duty machinery. Refer to "G-Series and R-Series Sensors for High Shock and Vibration Applications", document part no.: 551073 for more information.

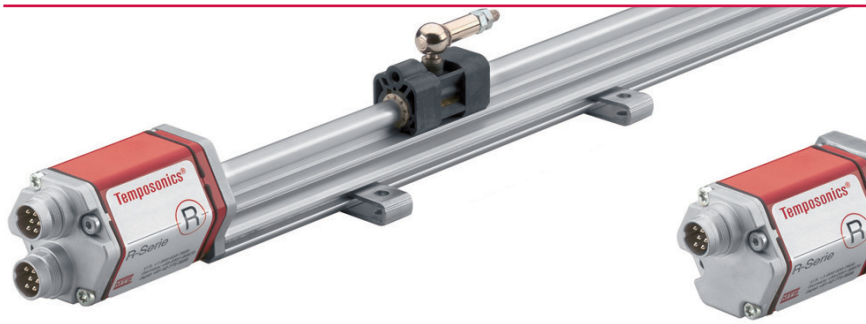
550991 Revision D



Model RP Profile-style position sensor

Model RH Rod-style position sensor

R-Series CANbus

FEATURES

- Linear, Absolute Measurement
- LEDs For Sensor Diagnostics
- Superior Accuracy, Resolution down to 2 µm
- Non-Contact Sensing Technology
- Linearity Deviation Less Than 0.01%
- Repeatability Within 0.001%
- Direct CAN Output (Position + Velocity)

BENEFITS

- Rugged Industrial Sensor
- Selectable Bus Termination (CANopen)
- CANopen with Heartbeat Function

APPLICATIONS

- Continuous Operation In Harsh Industrial Conditions
- High Pressure Conditions
- For Accurate, Multi-Magnet Position Measurement (up to 20 positions per sensor)

TYPICAL INDUSTRIES

- Factory Automation
- Fluid Power
- Plastic Injection and Blow Molding
- Material Handling and Packaging

ISO 9001 CERTIFIED

Product overview

R-Series model RH and RP sensors are extremely robust and are ideal for continuous operation under harsh industrial conditions.

MTS offers two standard sensor housings, rod and profile extrusion. The rod housing is capable of withstanding high pressures such as those found in hydraulic cylinders.

The profile extrusion housing provides convenient mounting options and captive sliding magnets which utilize slide bearings of special material that reduce friction, and help mitigate dirt build up.

The sensor head contains the active signal conditioning and a complete integrated electronics interface. Double shielding is used to ensure EMI protection for unsurpassed reliability and operating safety.

Product specifications

Parameters	Specifications
OUTPUT	
Measured output variables:	Position, velocity, optional multi-magnet position measurements (up to 20 magnet positions simultaneously)
Resolution:	**CANopen:** **Position:** 5 µm, 2 µm **Velocity:** 0.5 mm/s, 0.2 mm/s **CANbasic:** **Position:** 5 µm, 2 µm **Velocity:** 1.0 mm/s, 0.1 mm/s
Update times::	1.0 ms up to 2400 mm, 2.0 ms up to 4800 mm, 4.0 ms up to 7600 mm stroke length Add 0.5 ms for CANbasic up to 1200 mm
Linearity deviation:	< ± 0.01% full stroke (minimum ± 40 µm) (Linearity Correction Option (LCO) available)
Repeatability:	< ± 0.001% full stroke (minimum ± 2.5 µm)
Hysteresis:	< 4 µm
Outputs:	**Interface:** CAN-Fieldbus system ISO DIS 11898 **Data protocol CANopen:** CIA standard DS-301 V4.02 encoder profile DS-406 V3.1 **CANbasic:** CAN 2.0 A
Baud rate, kBit/s:	1000 800 500 250 125 50 20
Cable length, m:	<25 <50 <100 <250 <500 <1000 <2500
	Sensors will be supplied with ordered Baud rate which can be changed by the customer.
Stroke length:	**Range (Profile style):** 25 mm to 5080 mm (1 in. to 200 in.) **Range (Rod style):** 25 mm to 7620 mm (1 in. to 300 in.)
ELECTRONICS	
Operating voltage:	**+24 Vdc nominal:** -15% or +20% **Polarity protection:** up to -30 Vdc **Over voltage protection:** up to 36 Vdc **Current drain:** 100 mA typical **Dielectric withstand voltage:** 500 Vdc (DC ground to machine ground)

Parameters	Specifications
ENVIRONMENTAL	
Operating conditions:	**Operating temperature:** -40 °C (-40 °F) to +75 °C (+167 °F) **Relative humidity:** 90% no condensation **Temperature coefficient:** < 15 ppm/ °C
EMC test:	**Electromagnetic emission:** IEC/EN 50081-1 **Electromagnetic susceptibility:** IEC/EN 50082-2, IEC/EN 61000-4-2/3/4/6, level 3/4 criterium A, CE qualified
Shock rating:	100 g (single hit)/IEC standard 68-2-27 (survivability)
Vibration rating:	15 g / 10 to 2000 Hz / IEC standard 68-2-6
WIRING	
Connection type:	Single or dual 6-pin male D60 (M16) connector or two 5-pin Male/Female D54 (M12) connectors with 4-pin male (MS) connector or integral cable
PROFILE STYLE SENSOR (MODEL RP)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connector/ cable exit)
Sealing:	IP 65
Sensor extrusion:	Aluminum (Temposonics, profile style)
Mounting:	Any orientation. Adjustable mounting feet or T-slot nut (M5 threads) in bottom groove
Magnet types:	Captive-sliding magnet or open-ring magnet
ROD STYLE SENSOR (MODEL RH)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connector/ cable exit)
Sealing:	IP 67 or IP 68 for integral cable models
Sensor rod:	304L stainless steel
Operating pressure:	350 bar static, 690 bar peak (5000 psi static, 10,000 psi peak)
Mounting:	Any orientation. Threaded flange M18 x 1.5 or 3/4 - 16 UNF-3A
Typical mounting torque:	45 N-m (33 ft. - lbs.)
Magnet types:	Ring magnet, open-ring magnet, or magnet float

Enhanced monitoring and diagnostics

SENSOR STATUS AND DIAGNOSTIC DISPLAY

Integrated diagnostic LEDs (green/red), located on top of the sensor housing *(see 'Figure 1')*, provide basic visual monitoring for normal sensor operation and troubleshooting. Diagnostic display LEDs indicate four modes described in *'Table 1'*.

Figure 1. R-Series sensor Integrated diagnostic LEDs

Green	Red	Operation status/mode
ON	OFF	Normal function (operation mode)
ON	ON	Magnet not detected or wrong quantity of magnets
OFF	ON	Initialization error
Flashing	Flashing	Power out of range (high or low)

Table 1. Diagnostic display indicator modes

CANbus protocol

Temposonics R-Series models RP and RH linear-position sensors, as slave devices, fulfill all requirements of the CANbus (ISO 11898) protocol. The sensor's electronics convert the position measurements into bus oriented outputs and transfer this data directly to the controller.

The bus interface is appropriate for serial data transfer up to 1 Mbps maximum. Sensor integrated software supports bus profiles CANopen, CANbasic and DeviceNet for a comprehensive customized configuration of the sensor-bus system.

DeviceNet documentation is available from the MTS website at http://www.mtssensors.com/products/linear-position-sensors/index.html.

OPERATION MODES

R-Series sensors with CANbus protocol provide the following single or multi-magnet measurements:

Standard measurements:

- CANbasic; Position + velocity (using one magnet)
- CANopen; Position + velocity (using one to four magnets) + sensor internal electronics temperature

Multi-magnet measurement:
CANbasic; Positions for each of two to twenty magnets simultaneously.

When using multiple magnets, the minimum allowed distance between magnets is 75 mm (3 in.) to maintain proper sensor output *(see 'Figure 2')*.

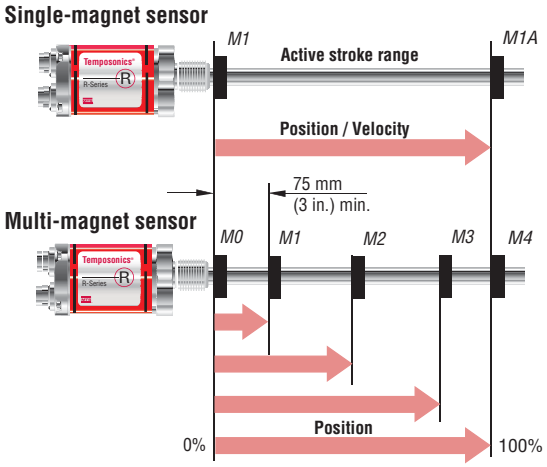


Figure 2. Single and multi-magnet output diagram

CANopen communication and functionality

CANopen corresponds to encoder profile *'DS-406 V3.1 (CIA standard DS-301 V4.02)'*. The CANopen functionality is described below in the following communication objects.

Note:

Conformance Test Certificate No. CiA199902-301V30/I-004 is provided by the CANbus user organization CiA (CAN in Automation) for MTS CANopen sensors.

LINEARITY CORRECTION OPTION (LCO)

The Linearity Correction Option (LCO) provides improved sensor output accuracy. For most stroke lengths linearity accuracy is improved up to a factor of 5 resulting in deviations from actual position of less than +/- 20 microns (0.0008 in.). For stroke lengths over 5000 mm (197 in.), the linearity accuracy is improved up to a factor of 10. Selecting the sensor style and magnet is important (both must be matched together). Contact the factory for assistance when designing for the LCO in your application.

SERVICE DATA OBJECT (SDO)

The SDO is mainly used for sensor configuration. Selectable parameters are as follows:

- Resolution for position + velocity
- 4 set points
- Preset of the operation range and the null position for four magnets

PROCESS DATA OBJECT (PDO)

The PDO provides real-time data transfer of sensor measurements in up to 8-byte data blocks. The sensor uses PDO's to relay information about magnet position, velocity, limit status, cam control and operation range for up to four magnets.

Data formats:

- 32-bits for position
- 16-bits for velocity
- 8-bits for value limit.

CANbus outputs

PDO TRANSMISSION TYPE

Asynchronous (cycle time of 1 to 65.535 ms) or synchronous

- Synchronization Object (SYNC)
- Emergency Object
- Nodeguard Object
- Heartbeat function
- Selectable bus termination
- Monitoring for the sensor internal electronics temperature

CANopen communication and functionality

CANOPEN CONFIGURATION

A software file is used as an Electronic Data Sheet (EDS) for sensor configuration. The EDS file is available on the R-Series Setup software mini diskette, part number: 551052 that comes with the sensor. To download the latest software go to MTS website at: http://www.mtssensors.com.

CANbasic (MTS)

CANbasic (MTS) allows a simple, flexible adaptation to customized profiles with a short bus access. The CANbasic protocol complies with CAN the 2.0A standard and includes applications data for single-magnet measurement (position, velocity, sensor status and five setpoints).

CANbasic (Multi-magnet measurement)

CANbasic (Multi-magnet measurement) provides position measurement on a single sensor using a maximum of twenty magnets. Setup and operation are accomplished through the on-site control system.

CANopen handheld address programmer

The *CANopen Handheld Address Programmer (see 'Figure 3')* is offered as an accessory used to setup the Node-Address for sensors with the CANopen interface. This setup is usually completed by the bus' LMT/LSS-Service. If the master system or customer controller does not support this service, connecting the CANopen Handheld Address Programmer to the sensor will bypass the service and allow direct setup.

Figure 3. R-Series CANopen Handheld Address Programmer (part no. 252382-D62) Installation Instructions (part no.: 551192)

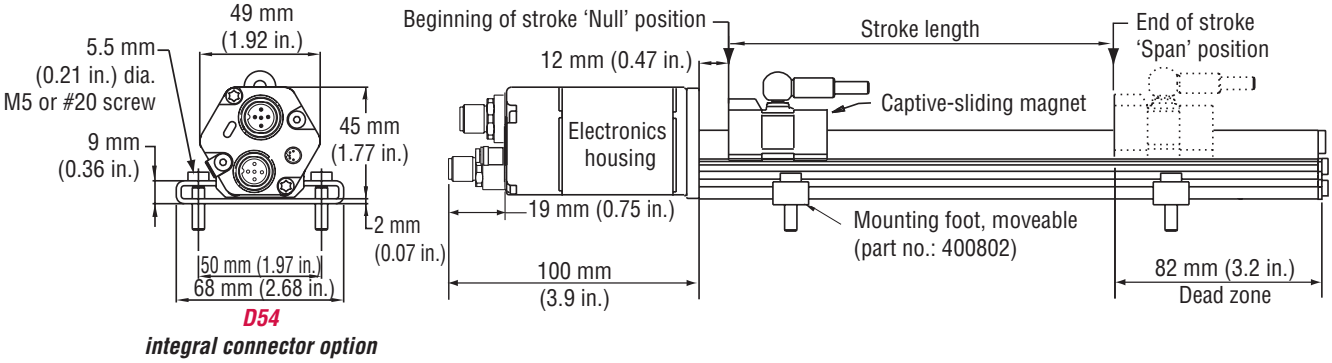

Figure 6. R-Series Model RP Profile-style sensor dimension reference (Shown with the ***D54*** integral connector option)

Standard magnet selections, mounting and installation (Model RP)

SELECTION OF POSITION MAGNETS (ONE MAGNET INCLUDED WITH MODEL RP SENSOR)

Temposonics Model RP profile-style sensors offer two basic mounting methods; side grooves for use with mounting feet or a bottom groove that accepts special T-Slot nuts. Both the mounting feet and T-Slot nuts can be positioned along the sensor extrusion to best secure the sensor for each particular application.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Model RH rod-style sensor dimension reference

The Temposonics R-Series rod-style sensor (Model RH) offers modular construction, flexible mounting configurations, and easy installation. The Model RH sensor is designed for mounting in applications where high pressure conditions exist, (5000 psi continuous, 10,000 psi spike), such as inside hydraulic cylinders. The Model RH sensor may also be mounted externally in many applications.

Stroke-dependent Dead Zones:

Stroke length:	Dead zone:
25 mm (1 in.) - 5000 mm (197 in.)	63.5 mm (2.5 in.)
5005 mm (197 in.) - 7620 mm (300 in.)	66 mm (2.6 in.)

Product overview

R-Series model RH and RP sensors are extremely robust and are ideal for continuous operation under harsh industrial conditions.

MTS offers two standard sensor housings, rod and profile extrusion. The rod housing is capable of withstanding high pressures such as those found in hydraulic cylinders.

The profile extrusion housing provides convenient mounting options and captive sliding magnets which utilize slide bearings of special material that reduce friction, and help mitigate dirt build up. The sensor head contains the active signal conditioning and a complete integrated electronics interface. Double shielding is used to ensure EMI protection for unsurpassed reliability and operating safety.

Controller Area Network (CAN) is a standard for device level communications and the foundation of fieldbus systems like DeviceNet, CANopen and CANbus.These fieldbus systems can provide high speed transmission appropriate for position indication and for motion control in industrial applications.

DeviceNet allows users to interface up to 64 devices using a single cable, thus eliminating the need for conventional methods of multiple wire runs. DeviceNet provides a way to define how, and in which priority, data will be transmitted over the network. The result is a lower complexity, cost-effective communications network linking industrial measurement and control devices. Together, the open DeviceNet protocol and the MTS "smart" R-Series sensors offer an effective, high-precision data transfer system that is well suited for industrial automation.

Shock rating:	100 g (single hit)/IEC standard 68-2-27 (survivability)
Vibration rating:	15 g / 10 to 2000 Hz / IEC standard 68-2-6
WIRING	
Connection type:	5-pin male D51 DeviceNet connector
PROFILE STYLE SENSOR (MODEL RP)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connector/ cable exit)
Sealing:	IP 65
Sensor extrusion:	Aluminum (Temposonics profile style)
Mounting:	Any orientation. Adjustable mounting feet or T-slot nut (M5 threads) in bottom groove
Magnet types:	Captive-sliding magnet or open-ring magnet
ROD STYLE SENSOR (MODEL RH)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connector/ cable exit)
Sealing:	IP 67 or IP 68 for integral cable models
Sensor rod:	304L stainless steel
Operating pressure:	350 bar static, 690 bar peak (5000 psi static, 10,000 psi peak)
Mounting:	Any orientation. Threaded flange M18 x 1.5 or 3/4 - 16 UNF-3A
Typical mounting torque:	45 N-m (33 ft. - lbs.)
Magnet types:	Ring magnet, open-ring magnet, or magnet float

Enhanced monitoring and diagnostics

SENSOR STATUS AND DIAGNOSTIC DISPLAY

Integrated diagnostic LEDs (green/red), located beside sensor connector *(see 'Figure 1')*, provide basic visual monitoring for normal sensor operation and DeviceNet communications. Diagnostic display LEDs indicate two modes, Network and Module status as described in *'Table 1'*.

Figure 1. R-Series sensor Integrated diagnostic LEDs

Network Status LED	Operation status/mode
Green	Normal function (operation mode)
Green Flashing	Waiting for instructions from DeviceNet master
Red	Initialization error
Red Flashing	No answer from DeviceNet master

Module Status LED	Operation status/mode
Green	Normal function (operation mode)
Red	Magnet not detected

Table 1. Diagnostic display indicator modes

DeviceNet protocol

R-Series models RP and RH linear-position sensors as slave devices fulfill all requirements of the CANbus (ISO 11898) standard. The sensors electronics and integrated software implement the DeviceNet protocol to convert the displacement measurements into bus oriented outputs and transfer this data directly to the controller.The DeviceNet protocol is appropriate for serial data transfer up to 500 kBit/sec.

When using the DeviceNet protocol with R-series sensors, functionality always includes but is not limited to the following:

- Position
- Error Detection
- Polling & bit-strobe communications modes

PLUG AND PLAY

R-Series sensors with DeviceNet output can be directly connected to a DeviceNet network. The plug and play design makes installation quick and easy. The sensor acts as a "slave" device that transmits its position and status data upon request to the "master" device such as a PLC or IPC. After initial system configuration, the user is not required to have extensive knowledge concerning network timing and sensor technology to execute operations within DeviceNet environment. Sensor-specific parameters are installed into the network using the Electronic Data Sheet (EDS). To obtain the EDS, go to www.mtssensors.com.

There are only two programmable parameters, which are, the node identifier and the baud rate. If desired, a PC programming tool, such as DeviceNet Manager offered by Allen Bradley, can be used to change their values. The node identifier is factory set at node 63.

The selected baud rate is shown in the sensor's model number. Note that the sensor will only be recognized on a network running at the same baud rate.

Model RP profile-style sensor dimension references

Standard magnet selections, mounting and installation (Model RP)

SELECTION OF POSITION MAGNETS (ONE MAGNET INCLUDED WITH MODEL RP SENSOR)

Temposonics Model RP profile-style sensors offer two basic mounting methods; side grooves for use with mounting feet or a bottom groove that accepts special T-Slot nuts. Both the mounting feet and T-Slot nuts can be positioned along the sensor extrusion to best secure the sensor for each particular application.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Model RH rod-style sensor dimension reference

The Temposonics R-Series rod-style sensor (Model RH) offers modular construction, flexible mounting configurations, and easy installation. The Model RH sensor is designed for mounting in applications where high pressure conditions exist, (5000 psi continuous, 10,000 psi spike), such as inside hydraulic cylinders. The Model RH sensor may also be mounted externally in many applications.

Stroke-dependent Dead Zones:	
Stroke length:	**Dead zone:**
25 mm (1 in.) - 5000 mm (197 in.)	63.5 mm (2.5 in.)
5005 mm (197 in.) - 7620 mm (300 in.)	66 mm (2.6 in.)

Model RP Profile-style position sensor

Model RH Rod-style position sensor

FEATURES

- Linear, Absolute Measurement
- LEDs For Sensor Diagnostics
- Superior Accuracy, Resolution down to 1 µm
- Non-Contact Sensing Technology
- Linearity Deviation Less Than 0.01%
- Repeatability Within 0.001%
- Direct Profibus-DP Output (Position +Velocity)
- Standard and Multi-magnet position measurements (up to 20 positions per sensor)

BENEFITS

- Rugged Industrial Sensor
- Fullfills All Requirements of Profibus-DP (EN 50170) Protocol
- Profibus-DP Provides Powerful Functions for Diagnostics and Configuration
- Linearity Correction Options

APPLICATIONS

- Continuous Operation In Harsh Industrial Conditions
- High Pressure Conditions
- For Accurate, Multi-Magnet Position Measurement (up to 20 positions per sensor)

TYPICAL INDUSTRIES

- Factory Automation
- Fluid Power
- Plastic Injection and Blow Molding
- Material Handling and Packaging

ISO 9001 CERTIFIED

CE

Product overview

R-Series model RH and RP sensors are extremely robust and are ideal for continuous operation under harsh industrial conditions. MTS offers two standard sensor housings, rod and profile extrusion. The rod housing is capable of withstanding high pressures such as those found in hydraulic cylinders. The profile extrusion housing provides convenient mounting options and captive sliding magnets which utilize slide bearings of special material that reduce friction, and help mitigate dirt build up. The sensor head contains the active signal conditioning and a complete integrated electronics interface. Double shielding is used to ensure EMI protection for unsurpassed reliability and operating safety.

Temposonics R-Series models RP and RH linear-position sensors fulfill all requirements of Profibus-DP (EN 50170) protocol. They also provide absolute position data to Profibus control units by using a serial, bit synchronous, RS-485 format at a baud rate up to 12 Mbps maximum.

In addition to data transmission, Profibus-DP provides powerful functionality for diagnostics and configuration, which is loaded into the bus using the GSD electronic device data sheet file. The downloadable .gsd file for Temposonics Profibus model sensors is available at http://www.mtssensors.com.

Product specifications

Parameters	Specifications
OUTPUT	
Measured output variables:	Position, up to 20 magnet positions simultaneously Position + Velocity, up to 5 magnets simultaneously
Resolution:	1 µm, other values are selectable when using the .gsd file
Update times:	0.5 ms at 500 mm, 1 ms at 2000 mm, 2 ms at 4500 mm, 3.1 ms at 7600 mm stroke length. For each additional magnet add 0.05 ms,. Add 0.03 ms for approximate values for velocity measurements.
Linearity deviation:	< ± 0.01% full stroke (minimum ± 50 µm) *(Linearity Correction Option (LCO) available)*
Repeatability:	< ± 0.001% full stroke (minimum ± 2.5 µm)
Hysteresis:	< 4 µm
Outputs:	**Interface:** Profibus-DP system ISO 74498 **Data format:** Profibus-DP (EN 50 170)
Data transmission rates:	12 MBd 1.5 MBd 500 kBd 187.5 kBd ≤93.75 kBd
Cable length, m:	<100 <200 <400 <1000 <1200
Stroke length:	**Range (Profile style):** 25 mm to 5080 mm (1 in. to 200 in.) **Range (Rod style):** 25 mm to 7620 mm (1 in. to 300 in.)
ELECTRONICS	
Operating voltage:	**+24 Vdc nominal:** -15% or +20% **Polarity protection:** up to -30 Vdc **Over voltage protection:** up to 36 Vdc **Current drain:** 90 mA typical **Dielectric withstand voltage:** 500 Vdc (DC ground to machine ground)

Parameters	Specifications
ENVIRONMENTAL	
Operating conditions:	**Operating temperature:** -40 °C (-40 °F) to 75 °C (167 °F) **Relative humidity:** 90% no condensation **Temperature coefficient:** < 15 ppm/ °C
EMC test:	**Electromagnetic emission:** IEC/EN 50081-1 **Electromagnetic susceptibility:** IEC/EN 50082-2, IEC/EN 61000-4-2/3/4/6, level 3/4 criterium A, CE qualified
Shock rating:	100 g (single hit)/IEC standard 68-2-27 (survivability)
Vibration rating:	15 g / 10 to 2000 Hz / IEC standard 68-2-6
WIRING	
Connection type:	**D63 option:** Two 6-pin (M16) connectors one male and one female **D53 option:** Two 5-pin (M12) connectors one male and one female. plus one 4-pin connector (M8) male
PROFILE STYLE SENSOR (MODEL RP)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connectors)
Sealing:	IP 65
Sensor extrusion:	Aluminum (Temposonics profile style)
Mounting:	Any orientation. Adjustable mounting feet or T-Slot nut (M5 threads) in bottom groove
Magnet types:	Captive-sliding magnet or open-ring magnet
ROD STYLE SENSOR (MODEL RH)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connectors)
Sealing:	IP 67
Sensor rod:	304L stainless steel
Operating pressure:	350 bar static, 690 bar peak (5000 psi static, 10,000 psi peak)
Mounting:	Any orientation. Threaded flange M18x1.5 or 3/4-16 UNF-3A
Typical mounting torque:	45 N-m (33 ft. - lbs.)
Magnet types:	Ring magnet, open-ring magnet, or magnet float

Enhanced monitoring and diagnostics

SENSOR STATUS AND DIAGNOSTIC DISPLAY

Integrated diagnostic LEDs (green/red), located beside sensor connectors *(see 'Figure 1')*, provide basic visual monitoring for normal sensor operation and troubleshooting. diagnostic display LEDs indicate four modes described in *'Table 1'*.

Figure 1. R-Series sensor Integrated diagnostic LEDs

Green	Red	Operation status/mode
ON	OFF	Normal function (operation mode)
ON	ON	Magnet not detected or wrong quantity of magnets
Flashing	OFF	Waiting for master parameters
Flashing	ON	Programming mode

Table 1. Diagnostic display indicator modes

Profibus-DP output parameters

R-Series sensors with Profibus-DP output are compliant with Profibus DP slave class 2 and have the following features:

Selectable outputs:

- Absolute position measurement
- Velocity measurement
- Sensor Status
- Error detection (e.g. magnet status)

Selectable parameters:

- Offset / preset for each magnet
- Measuring direction; forward and reverse acting
- Intel® and Motorola® data format transfers

OPERATION MODES

R-Series sensors with Profibus-DP protocol provide the following single or multi-magnet measurements:

Standard measurement (P102 output code):

- Position (using one magnet)

Multi-magnet measurement (P101 output code):

- Position (using up to 20 magnets simultaneously)

Multi-magnet measurement (P103 output code):

- Position + velocity (using up to 5 magnets simultaneously)

When using multiple magnets, the minimum allowed distance between magnets is 75 mm (3. in.) to maintain proper sensor output *(see 'Figure 2')*.

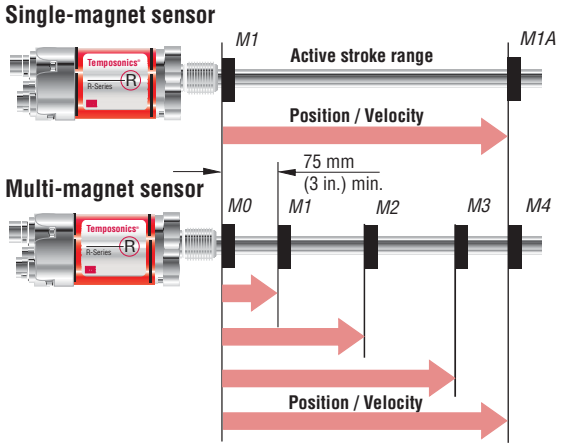

Figure 2. Single and multi-magnet output diagram

Profibus-DP communication and functionality

DATA EXCHANGE

For multi-magnet measurement, 1 status byte and 3 bytes of position data for each position are transmitted. The status byte contains an error bit and the position number for the following measurement value. Dependent on sensor parameters, sensor data can be transferred in different data formats, (e.g. Intel® or Motorola®)

LINEARITY CORRECTION OPTION (LCO)

The Linearity Correction Option (LCO) provides improved sensor output accuracy. For most stroke lengths linearity accuracy is improved up to a factor of 5, resulting in deviations from actual position of less than ± 20 microns (0.0008 in.). For stroke lengths over 5000 mm (197 in.) the linearity accuracy is improved up to a factor of 10. Selecting the sensor style and magnet is important (both must be matched together). Contact the factory for assistance when designing for the LCO in your application.

Profibus-DP handheld address programmer

The *Profibus-DP Handheld Address Programmer (see 'Figure 3')* is offered as an accessory used to setup the *Slave Address* via the Profibus-DP interface. Addressing is usually performed by the Profibus-DP SetSlaveAddress command. If the master system or controller does not support this service, connecting the Profibus-DP Handheld Address Programmer to the sensor will bypass the service and allow direct setup.

When ordering the *Profibus-DP Node and Field Address Programmer* accessory, for D53 and D63 style connections, order part no.: 280640. The Profibus-DP Node and Address Programmer Installation instructions (document part no.: 551193) is available in PDF format at http://www.mtssensors.com.

Figure 3. R-Series Profibus-DP Handheld Address Programmer, part no.: 280640

Programming accessory	Function	Part number

Standard magnet selections, mounting and installation (Model RH)

Magnets must be ordered separately with Model RH position sensors. The standard ring magnet (part number 201542-2) is suitable for most applications.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

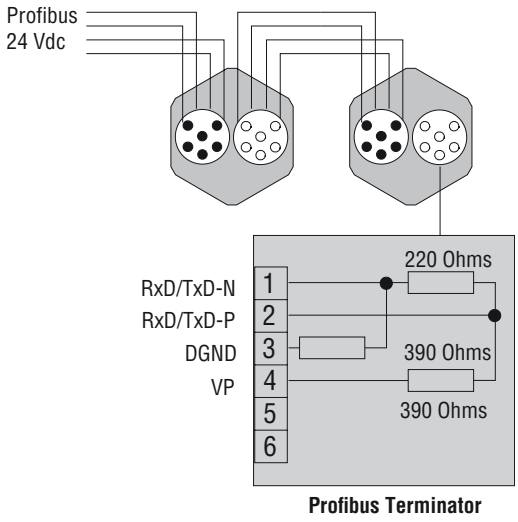
R-Series Profibus

Connection and wiring options

BUS / INPUT VOLTAGE CONNECTION OPTIONS (DAISY-CHAIN TOPOLOGIES)

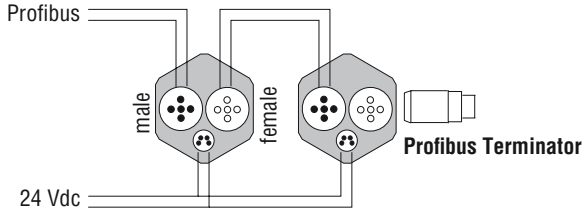
(D63) CONNECTOR OPTION

The shielded hybrid cable (5 wires; two bus, two power supply and 1 machine ground, part no.: 530040) is used for both bus and supply voltage (D63) connections. This provides convenient daisy-chain connections for applications with multiple Profibus-DP sensors.



(D53) CONNECTOR OPTION

For (D53) connection types, a separate 4-pin connector and cable is used for the supply voltage.



(D53) CONNECTOR OPTION WITH THE 'T' CONNECTOR

A 'T' connector is used with the separate bus cable to enable the bus to remain active when a sensor is disconnected.

Data Sheet

Model RP Profile-style position sensor

Model RH Rod-style position sensor

FEATURES

- Linear, Absolute Measurement
- LEDs For Sensor Diagnostics
- Superior Accuracy, Resolution down to 1 µm
- Non-Contact Sensing Technology
- Linearity Deviation Less Than 0.01%
- Repeatability Within 0.001%
- Direct EtherCAT® Interface, Position + Velocity
- 100 µs Position / Velocity Update Time, Regardless of Overall Stroke Length

BENEFITS

- Rugged Industrial Sensor
- Position + Velocity Measurements For Up to 20 Magnets

APPLICATIONS

- Continuous Operation In Harsh Industrial Conditions
- High Pressure Conditions
- For Accurate, High-Speed, Simultaneous Multi-Position and Velocity Measurements

TYPICAL INDUSTRIES

- Factory Automation
- Fluid Power
- Plastic Injection and Blow Molding
- Material Handling and Packaging

ISO 9001 CERTIFIED

CE

Product overview

Temposonics R-Series EtherCAT sensors represent MTS Sensors' development and product offering in high-speed networked position feedback. EtherCAT (Ethernet for Control Automation Technology) is a unique interface developed by Beckhoff Automation and is supported by the EtherCAT Technology Group (ETG).

This interface is used for industrial Ethernet, providing the fastest, most deterministic industrial networking solution possible using the base Ethernet physical layer. By using this format, coupled with our high speed networked sensing capability, machine builders and automation engineers will be able to overcome bandwidth and node limitation issues found with other commercially available industrial networks.

Product specifications

Parameters	Specifications
OUTPUT	
Measured output variables:	Simultaneous multi-position and velocity measurements up to 20 magnets or up to 5 magnets when using high-speed update (for EtherCAT distributed clock mode). Option for acceleration measurements up to 2 magnets.
Resolution:	1 to 1000 µm selectable
Update time:	100 µs min. (high speed update feature is active when the controller's loop time is less than the sensor's measurement cycle time)
Linearity deviation:	< ± 0.01% full stroke (minimum ± 50 µm) (Linearity Correction Option (LCO) available)
Repeatability:	< ± 0.001% full stroke (minimum ± 2.5 µm)
Hysteresis:	< 4 µm
Outputs:	**Interface:** EtherCAT **Data format:** EtherCAT 100 Base-Tx, fast Ethernet **Data transmission rate:** 100 Mbit/s max.
Stroke length:	**Range (Profile style):** 25 mm to 5080 mm (1 in. to 200 in.) **Range (Rod style):** 25 mm to 7620 mm (1 in. to 300 in.)
ELECTRONICS	
Operating voltage:	**+24 Vdc nominal:** -15% or +20% **Polarity protection:** up to -30 Vdc **Over voltage protection:** up to 36 Vdc **Current drain:** 80 mA typical **Dielectric withstand voltage:** 500 Vdc (DC ground to machine ground)

Parameters	Specifications
ENVIRONMENTAL	
Operating conditions:	**Operating temperature:** 0 °C (32 °F) to +75 °C (+167 °F) **Relative humidity:** 90% no condensation **Temperature coefficient:** < 15 ppm/ °C
EMC test:	**Electromagnetic emission:** IEC/EN 50081-1 **Electromagnetic susceptibility:** IEC/EN 50082-2, IEC/EN 61000-4-2/3/4/6, level 3/4 criterium A, CE qualified
Shock rating:	100 g (single hit)/IEC standard 68-2-27 (survivability)
Vibration rating:	15 g / 10 to 2000 Hz / IEC standard 68-2-6
WIRING	
Connection type:	D56 option: Two female 4-pin (M12-D) plus one 4-pin male (M8) connector
PROFILE STYLE SENSOR (MODEL RP)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connectors)
Sealing:	IP 65
Sensor extrusion:	Aluminum (Temposonics profile style)
Mounting:	Any orientation. Adjustable mounting feet or T-slot nut (M5 threads) in bottom groove
Magnet types:	Captive-sliding magnet or open-ring magnet
ROD STYLE SENSOR (MODEL RH)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connectors)
Sealing:	IP 67
Sensor rod:	304L stainless steel
Operating pressure:	350 bar static, 690 bar peak (5000 psi static, 10,000 psi peak)
Mounting:	Any orientation. Threaded flange M18 x 1.5 or 3/4 - 16 UNF-3A
Typical mounting torque:	45 N-m (33 ft. - lbs.)
Magnet types:	Ring magnet, open-ring magnet, or magnet float

Enhanced monitoring and diagnostics

SENSOR STATUS AND DIAGNOSTIC DISPLAY

Integrated diagnostic LEDs (green/red), located beside sensor connectors *(see 'Figure 1')*, provide basic visual monitoring for normal sensor operation and troubleshooting. Diagnostic display LEDs indicate four modes described in *'Table 1. Diagnostic display indicator modes'*

Figure 1. R-Series sensor Integrated diagnostic LEDs

Status LED (Green)	Off: On: Flashing:	Initializing Normal function Various flashing codes show different operational status
Error LED (Red)	Off: On: Flashing:	Normal function missing magnet Supply voltage beyond limits (high or low)
IN Port LED (Green)	Off: On: Flashing:	No link Link detected Traffic
OUT Port LED (Green)	Off: On: Flashing:	No link Link detected Traffic

Table 1. Diagnostic display indicator modes

EtherCAT interface

EtherCAT is an open field bus system which is based on Ethernet technology, (IEEE 802.3), with a high data rate and short response time, resulting in very good real-time performance. It is standardized in the IEC/PAS 62407 and is part of the ISO 15745-4 standard. The EtherCAT protocol is also being integrated into the IEC 61158, IEC 61784, and IEC 61800-7 standards.

The Temposonics EtherCAT sensor is connected as a slave device, and as such, fulfils all the requirements of the EtherCAT field bus system. Adding the sensor to an EtherCAT bus system is very easy. The system manager (e.g. TwinCAT from Beckoff Automation) gets all the parameters of the sensor from the XML file, available from the MTS website at http://www.mtssensors.com. There are no adjustments necessary on the sensor itself. For some applications, optimum system performance is obtained using the sensor's high speed updates, up to 10 kHz, by synchronizing to the EtherCAT's *'distributed clock mode'* (available on the "E101" sensor output option).

Operation modes and output

There are two operation modes available:

E101 - Fast update position and velocity:

- Designed for high-speed motion control
- Up to 5 simultaneous magnet measurements
- 100 µs update rate, (independent of stroke length)

E102 Multi-magnet position and velocity:

- Designed for gauging systems having many magnet positions
- Up to 20 simultaneous magnet measurements
- Standard update rates, (stroke length dependent)

When using multiple magnets, the minimum allowed distance between magnets is 75 mm (3 in.) to maintain proper sensor output *(see 'Figure 2')*.

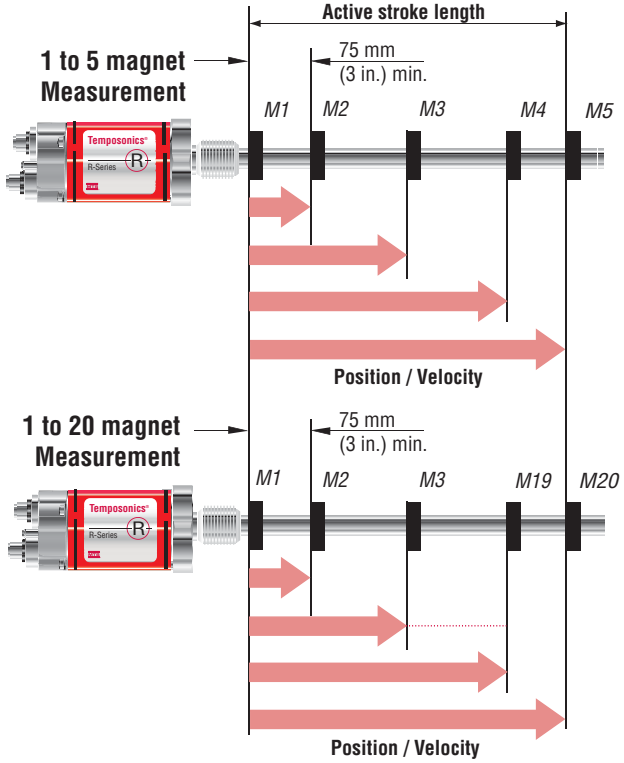

Figure 2. Single to multi-magnet output diagram

LINEARITY CORRECTION OPTION (LCO)

The Linearity Correction Option (LCO) provides improved sensor output accuracy. For most stroke lengths linearity accuracy is improved up to a factor of 5 resulting in deviations from actual position of less than ± 20 µm (0.0008 in.). For stroke lengths over 5000 mm (197 in.), the linearity accuracy is improved up to factor of 10. Selecting the sensor style and magnet is important (both must be matched together). Contact the factory for assistance when designing for the LCO in your application.

Model RP profile-style sensor dimension references

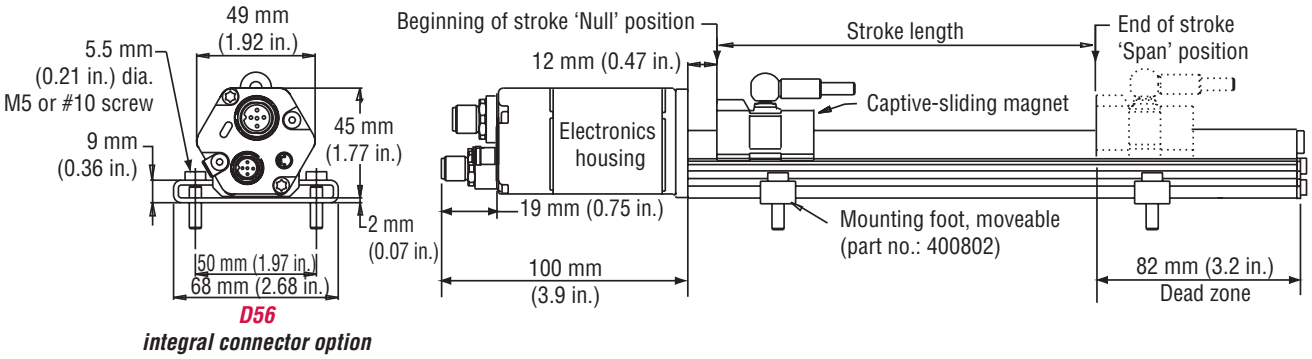

Figure 3. R-Series Model RP Profile-style sensor dimension reference (Shown with the ***D56*** connector option)

MODEL RP, PROFILE-STYLE SENSOR WITH OPEN-RING MAGNET *Drawing is for reference only, contact applications engineering for tolerance specific information.*

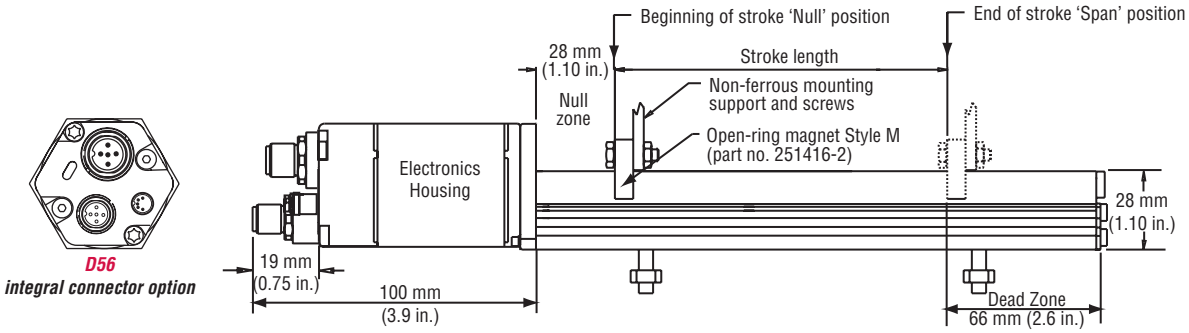

Figure 4. R-Series Model RP Profile-style sensor dimension reference (Shown with the ***D56*** connector option)

Standard magnet selections, mounting and installation (Model RP)

SELECTION OF POSITION MAGNETS (ONE MAGNET INCLUDED WITH MODEL RP SENSOR)

Temposonics Model RP profile-style sensors offer two basic mounting methods; side grooves for use with mounting feet or a bottom groove that accepts special T-Slot nuts. Both the mounting feet and T-Slot nuts can be positioned along the sensor extrusion to best secure the sensor for each particular application.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

R-Series EtherCAT®

Model RH rod-style sensor dimension reference

The Temposonics R-Series rod-style sensor (Model RH) offers modular construction, flexible mounting configurations, and easy installation. The Model RH sensor is designed for mounting in applications where high pressure conditions exist (5000 psi continuous, 10,000 psi spike) such as inside hydraulic cylinders. The Model RH sensor may also be mounted externally in many applications.

Stroke-dependent Dead Zones:	
Stroke length:	**Dead zone:**
25 mm (1 in.) - 5000 mm (197 in.)	63.5 mm (2.5 in.)
5005 mm (197 in.) - 7620 mm (300 in.)	66 mm (2.6 in.)

Product overview

Temposonics R-Series EtherNet/IP™ sensors represent MTS Sensors' development and product offering in networked position feedback. EtherNet/IP™ systems require only a single point of connection for both configuration and control, because EtherNet/IP supports both I/O (or implicit) messages—those that typically contain time-critical control data—and explicit messages—those in which the data field carries both protocol information and instructions for service performance. And, as a producer-consumer network that supports multiple communication hierarchies and message prioritization, EtherNet/IP™ provides more efficient use of bandwidth than a device network based on a source-destination model. EtherNet/IP systems can be configured to operate either in a master/slave or distributed control architecture using peer-to-peer communication.

Product specifications

Parameters	Specifications
OUTPUT	
Measured output variables:	Simultaneous multi-position and velocity measurements up to 20 magnets.

Table 1. Diagnostic display indicator modes

EtherNet/IP™ interface

EtherNet/IP™ is an Industrial Ethernet implementation of the Common Industrial Protocol (CIP), managed by the Open DeviceNet Vendors Association (ODVA), which defines communication services for automation. Ethernet/IP uses standard IEEE 802.3 technology at both the Physical Layer and Data Layers for compatibility with other applications and protocols. The protocol is also compliant with IEC 61158-2 for the physical layer and IEC 61784-1, -2 for measurement and control profiles.

Note:

Go to www.mtssensors.com to download latest EDS file.

This Ethernet/IP device also offers Device-Level-Ring (DLR) capability to directly connect devices to a ring topology without the use of external switches. DLR provides device-level network re-routing and failure point identification to improve reliability and network recovery time.

Operation modes and output

N101 Single and Multi-magnet position and velocity:

Up to 20 simultaneous magnet measurements are possible when using multiple magnets. The minimum allowed distance between magnets is 75 mm (3 in.) to maintain proper sensor output *(see 'Figure 2')*.

R-Series Model RD4

Direct Position and Velocity Output

Data Sheet

Document Part Number
551166 Revision A

Model RD4 compact sensor with detatched electronics

FEATURES

- R-Series Detached Electronics Sensor
- Linear, Absolute Measurement
- Non-Contact Sensing Technology
- Linearity Deviation Less Than 0.02%
- Repeatability Within 0.001%
- Full Range of Outputs: Voltage, Current, SSI, CANbus, DeviceNet, Profibus, EtherCAT® and EtherNet/IP
- Simultaneous Multi-Position and Velocity Measurements
- LEDs For Sensor Status and Diagnostics

BENEFITS

- Detached Sensor Electronics Provide for the Smallest R-Series sensor Head
- Allows Isolating the Sensor Electronics From High Temperatures, High Vibration / Shock, or Other Environmental Extremes

APPLICATIONS

- Clevis Mount Cylinders Having Minimal Space Available
- High Temperatures or High Vibration / Shock Levels that Require Remote Mounting of the Sensor Electronics
- Space Limited Applications

TYPICAL INDUSTRIES

- Fluid Power
- Steel Mills
- Material Handling and Packaging
- Woodworking, Metalworking and Assembly Tools

Product overview

The Temposonics RD4 position sensor provides an added degree of flexibility compared to the standard R-Series rod style sensor package. The RD4 design utilizes a separate electronics housing and interconnection cable to allow installation of the sensor rod into small spaces. By relocating the electronics, the head of the sensor rod is reduced to its minimal size. This makes the RD4 ideal for use with clevis mount cylinders or any space limited cylinder application. Also, the RD4 sensor can be used for applications that require remote mounting of the sensor electronics due to environmental factors, such as, high temperatures or high levels of shock and vibration.

The RD4 interconnection cable exits the head of the sensor rod and connects to the electronics housing. The electronics housing, along with its mounting block, can be configured with either a side cable connection or a bottom cable connection. The side cable connection is for use with threaded rod styles; 'M', 'T', 'C' and 'D'. These threaded rod styles provide for easy sensor installation into a standard threaded port opening on the top of the cylinder end cap.

The bottom cable connection is for use with the pressure-fit rod style (i.e. style 'S'). The rod style 'S' requires an appropriately machined cavity in the cylinder end cap to house the head of the sensor rod. Also, a hole going through the end cap is needed to channel the interconnection cable to the electronics housing that mounts on the side of the end cap. Proper design and careful sensor installation is required to assure the correct fit and o-ring sealing. MTS factory assistance is recommended when designing for the rod style 'S' in all new RD4 applications.

Output options

The R-Series Model RD4 sensor is available in voltage, current, SSI, CANbus, DeviceNet, Profibus, EtherCAT® and EtherNet/IP outputs.

Important specification note:

For R-Series model specific specifications, consult the individual data sheets applicable to the sensor output(s) for your application.

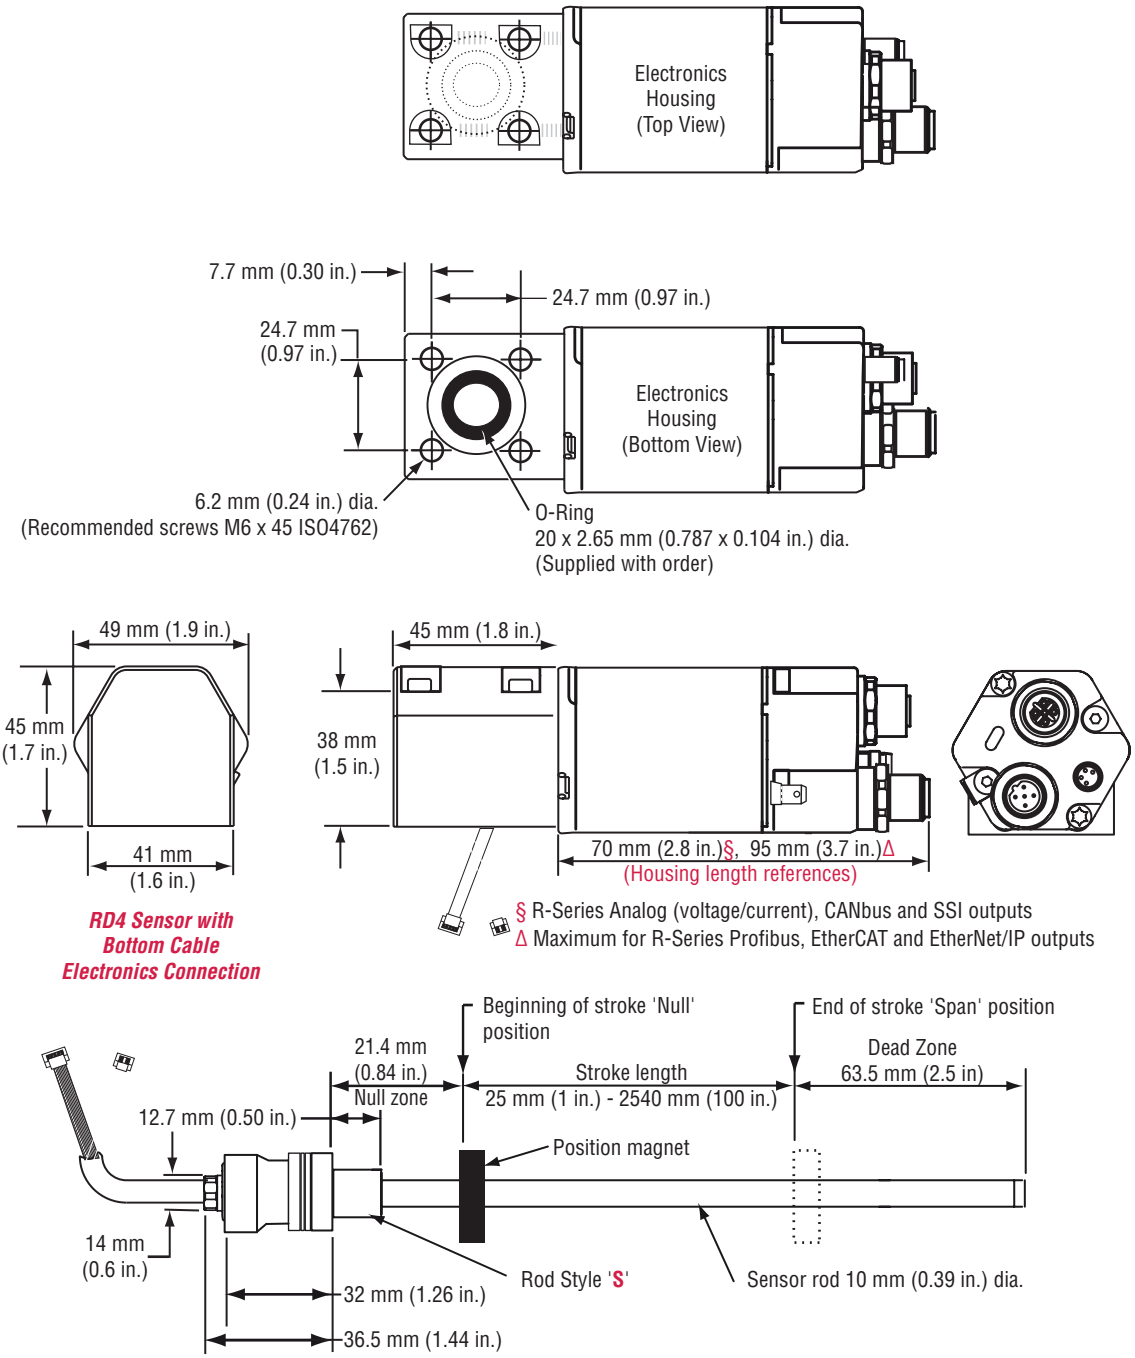

Figure 3. R-Series Model RD4 sensor with bottom cable electronics connection and rod style 'S'

Standard magnet selections (Model RD4)

Magnets must be ordered separately with Model RD4 position sensors. The standard ring magnet (part number 201542-2) is suitable for most applications.

Refer to the Accessories section of this catalog for magnet selections.

Sensor cylinder installation for side cable connection and threaded rod styles

Cylinder Installation Note:

The position magnet requires minimum distances away from ferrous metals to allow proper sensor output. The minimum distance from the front of the magnet to the cylinder end cap is 15 mm (0.6 in.). The minimum distance from the back of the magnet to the piston head is 3.2 mm (0.125 in.). The non-ferrous spacer (part no.: 400633), provides this minimum distance when used along with the standard ring magnet (part no.: 201542-2).

R-SERIES RD4 SENSOR CYLINDER INSTALLATION WITH SIDE CABLE CONNECTION AND ROD STYLES 'M' AND 'T'

Drawing is for reference only, contact applications engineering for tolerance specific information.

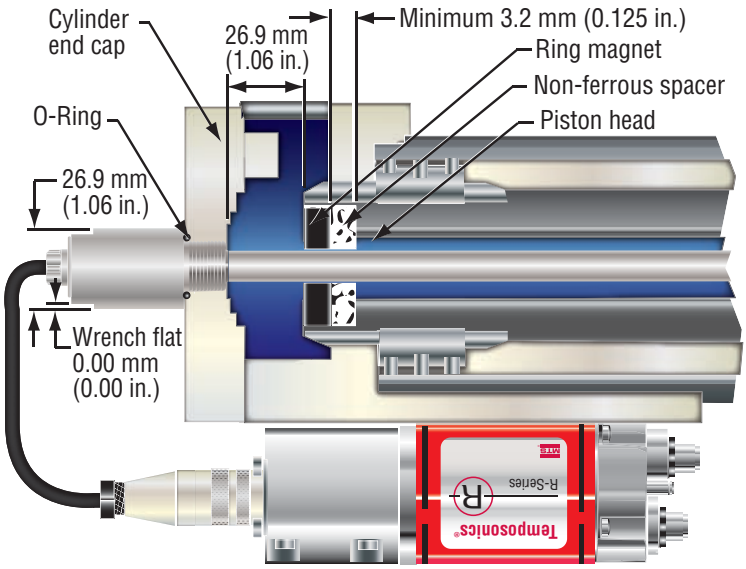

Figure 4. R-Series Model RD4 sensor installation using side cable connection and rod styles 'M' or 'T'

R-SERIES RD4 SENSOR CYLINDER INSTALLATION FOR SIDE CABLE CONNECTION AND ROD STYLES 'C' AND 'D'

Drawing is for reference only, contact applications engineering for tolerance specific information.

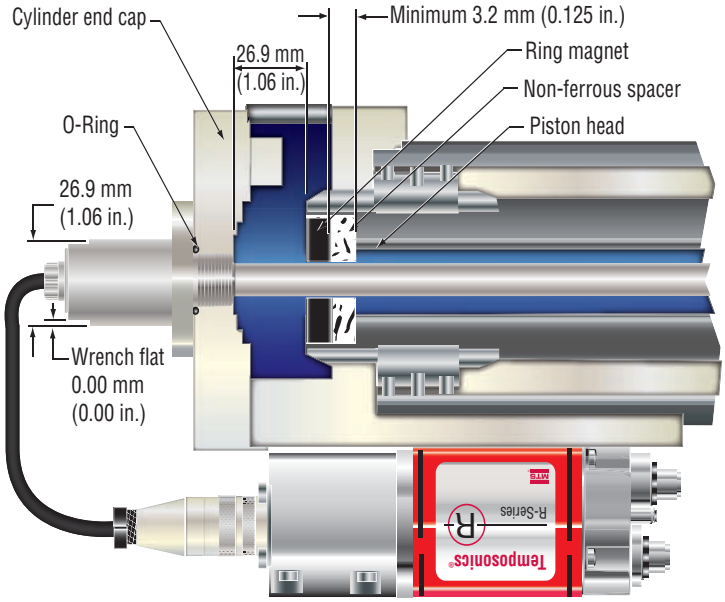

Figure 5. R-Series Model RD4 sensor installation using side cable connection and rod styles 'C' and 'D'

Sensor cylinder installation for bottom cable connection and pressure fit rod style

R-SERIES RD4 SENSOR CYLINDER INSTALLATION FOR BOTTOM CABLE CONNECTION AND PRESSURE FIT ROD STYLE 'S'

Drawing is for reference only, contact applications engineering for tolerance specific information.

Pressure fit rod style 'S' installation Notes:

1. The position magnet requires minimum distances away from ferrous metals to allow proper sensor output. When using rod style 'S' mounted inside a cylinder end cap, the minimum distance from the front of the magnet to the cylinder end cap is 21 mm (0.83 in.).
2. The minimum distance from the back of the magnet to the piston head is 3.2 mm (0.125 in.). The non-ferrous spacer (part no.: 400633), provides this minimum distance when used along with the standard ring magnet (part no.: 201542-2).
3. In the event that the position magnet is to be secured in the piston head by using a ferrous circlip, then an additional non-ferrous spacer is recommended on the front side of the magnet (as shown below ‡).

Document Part Number
551081 Revision B

Model RF flexible housing option for R-Series sensors with voltage, current, SSI, CANbus, DeviceNet, Profibus, EtherCAT® and EtherNet/IP™ outputs

R-Series RF Flex

FEATURES

- Linear, Absolute Measurement Along an Arc
- LEDs For Sensor Diagnostics
- Non-Contact Sensing Technology
- Linearity Deviation Less Than 0.02%
- Repeatability Within 0.001%
- Flexible Housing is Optional For MTS R-Series Sensors With The Following Full Range of Outputs: Voltage, Current, SSI, CANbus, DeviceNet, Profibus, EtherCAT® and EtherNet/IP™
- Measuring Stroke Range: 255 mm (10 in.) to 10,060 mm (396 in.) *(Contact factory for longer stroke lengths)*

BENEFITS

- Rugged Industrial Sensor
- Multi-Magnet Position Measurement: Up to 20 Positions
- 100% Field Adjustable Null And Span Setpoints
- Cost Effective, Convenient Shipping for Long Measuring Lengths

APPLICATIONS

- Hydraulic Cylinder Applications with Limited Sensor Installation Space
- Accurate Position Measurement Along an Arc
- Very Long Measurement Lengths

TYPICAL INDUSTRIES

- Fluid Power
- Steel Mills Using Long Cylinders
- Material Handling and Packaging
- Woodworking, Metalworking and Assembly Tools
- Converting Machines

EtherCAT Technology Group EtherNet/IP conformance tested

ISO 9001 CERTIFIED CE

Product overview

MTS offers the Model RF Flexible housing as an option with our R-Series family of extremely robust, highly accurate, linear-position sensors.

Constructing a R-Series sensor with the RF flexible housing results in a flexible style sensor that offers trouble-free performance in applications that require very long stroke lengths and linear measurements on an arc.

The Model RF flexible sensors are available in all R-Series sensor outputs including analog, serial, digital, and bus interfaces. Standard stroke lengths for the sensor are up to 10 meters (396 in.) and for special applications, longer lengths are available by consulting the factory.

Flexible sensors incorporate the Temposonics SE (Sensing Element) technology that is the same building block all MTS sensor models use. The SE is housed in a fluoroelastomer coated stainless steel housing that is flexible and can be bent in an arc to an 8 inch minimum bend radius.

Most operating parameters are identical to their rigid cousins. Model RF sensors are recommended for long-length applications because they are simply coiled inside a 40-inch diameter box for shipping, which simplifies logistics and handling.

The model RF sensor can easily bend around corners or obstacles and provides a simple solution for applications where installation space is too confined, or has limited access, making installation or replacement too difficult and costly for a standard rigid type sensor.

Output options

The Model RF Flexible Housing option is available for R-Series Sensors with voltage, current, SSI, CANBus, DeviceNet, Profibus, EtherCAT and EtherNet/IP outputs.

Important specification notes:

1. For R-Series model specific specifications, consult the individual R-Series data sheets applicable to the sensor output(s) being used.
2. All sensors constructed with the flexible housing have their specifications measured while laying flat.

Product specifications

Parameters	Specifications
OUTPUT	
Measured output variables:	Position, velocity, simultaneous multi-position and velocity measurements. (Measured output variables depend on the complete sensor model used.)
Resolution:	Output dependent
Update times:	Output dependent
Linearity deviation:	< ± 0.02% full stroke (minimum ± 100 µm) Linearity Correction Option (LCO) available for some R-Series models
Repeatability:	< ± 0.001% full stroke (minimum ± 2.5 µm)
Hysteresis:	< 4 µm, 2 µm typical
Outputs:	Voltage, current, SSI, CANbus, DeviceNet, Profibus, EtherCAT and EtherNet/IP
Measuring range:	255 to 10,060 mm (10 to 396 in.) (Contact factory for longer stroke lengths)
ELECTRONICS	
Operating voltage:	**+24 Vdc nominal:** -15% or +20% **Polarity protection:** up to -30 Vdc **Over voltage protection:** up to 36 Vdc **Current drain:** Output dependent **Dielectric withstand voltage:** 500 Vdc (DC ground to machine ground)
ENVIRONMENTAL	
Operating conditions:	**Operating temperature:** -40 °C (-40 °F) to +75 °C (+167 °F) **Relative humidity:** 90% no condensation
EMC test:	**Emissions:** IEC/EN 50081-1 **Immunity:** IEC/EN 50082-2 IEC/EN 61000-4-2/3/4/6, level 3/4 criterium A, CE qualified
Shock rating:	100 g (single hit)/ IEC standard 68-2-27 (survivability)
Vibration rating:	5 g/10 to 2000 Hz, IEC standard 68-2-6 (operational)
WIRING	
Connection type:	Connector or integral cable (output dependent)
ROD STYLE SENSOR (MODEL RF)	
Electronic head:	Aluminum die cast housing with diagnostic LED display (LEDs located beside connector/cable exit)
Sensor stroke:	Flexible stainless-steel pipe (PTFE plastic coated), minimum bend radius 200 mm (8 in.)
Sealing:	**IP30:** (IP67 or IP68 rating when installed inside the optional 1/2 inch O.D. pressure housing pipe)
Mounting:	Any orientation. Threaded flange M18 x 1.5 or 3/4 - 16 UNF-3A
Magnet types:	Ring magnet or open-ring magnet or block magnet

R-SERIES SENSOR WITH MODEL RF FLEXIBLE HOUSING OPTION

Drawing is for reference only, contact applications engineering for tolerance specific information.

Notes:

1. Total sensor length tolerances are:
   +8 mm (0.3 in.)/-5mm (0.2 in.) up to 7600 mm (300 in.) stroke length.
   +15 mm ((0.6 in.)/-5 mm (0.2 in.) over 7600 mm (300 in.) stroke length.
2. Tolerances of total length do not influence the measuring stroke length.

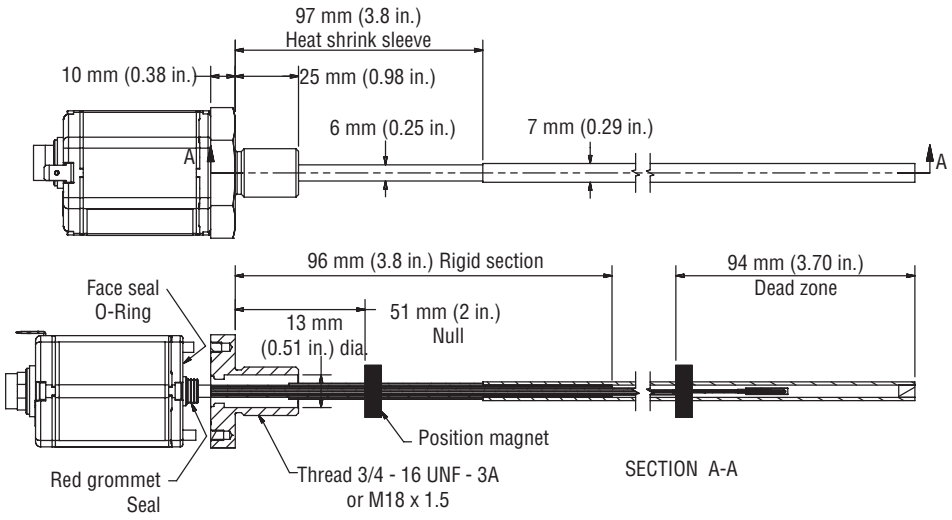

Figure 1. R-Series Model RF flexible housing dimension reference

Standard magnet selections (Model RF)

Magnets must be ordered separately with Model RF position sensors.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Sensor mounting and Installation references

R-SERIES MODEL RF SENSOR MOUNTING AND INSTALLATION *Flexible installation in any position!*

The model RF flexible sensor housing can be mounted to provide straight or curvilinear measurements. The sensor's flexible housing requires supports or anchoring to maintain proper alignment between the sensor rod and the magnet. Without proper alignment, the sensor's output signal can be interrupted or lost.

A hex flange comes mounted on the sensor head having either U.S. customary threads (3/4 - 16 UNF inches) or metric threads (M18 x 1.5). The flange is secured to the sensor head by 2 metric screws (M4 x 59 mm, 2.5 mm hex socket head). The flange can be used, or removed, to best accommodate the installation requirements. If the sensor is mounted without the flange, the red grommet seal can be cut off to provide a flush mounting surface for the sensor's face seal O-Ring *(shown in 'Figure 1' and 'Figure 2')*.

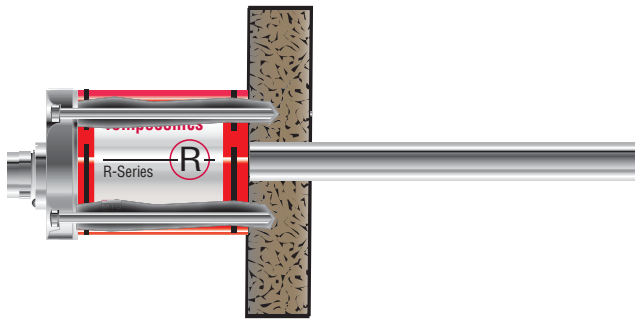

Figure 2. Installation example for flush mounting with red grommet seal removed.

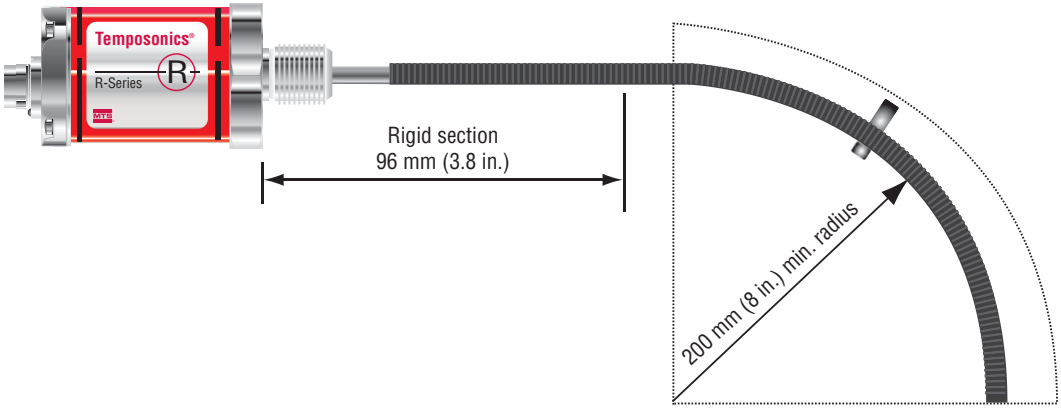

Figure 3. Installation example showing minimum bend radius for curvilinear measurements.

Most applications require that the RF flexible sensor housing be supported, such as, placed inside a guide pipe made of non-ferrous material, straight or bent to the desired shape.

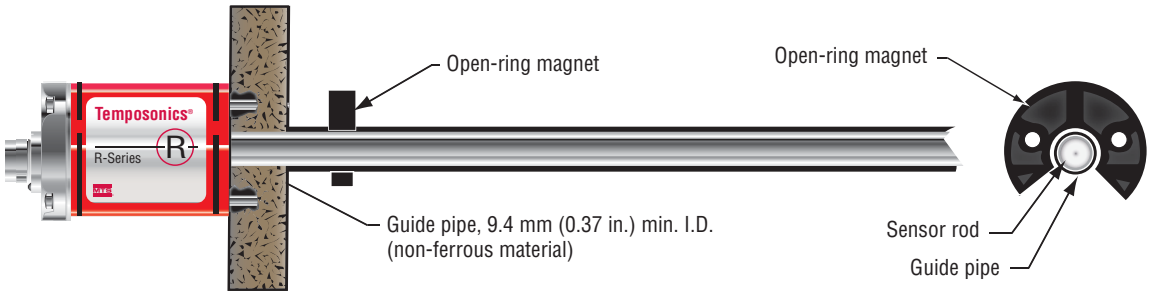

Figure 4. Installation example using non-ferrous guide pipe (customer supplied).

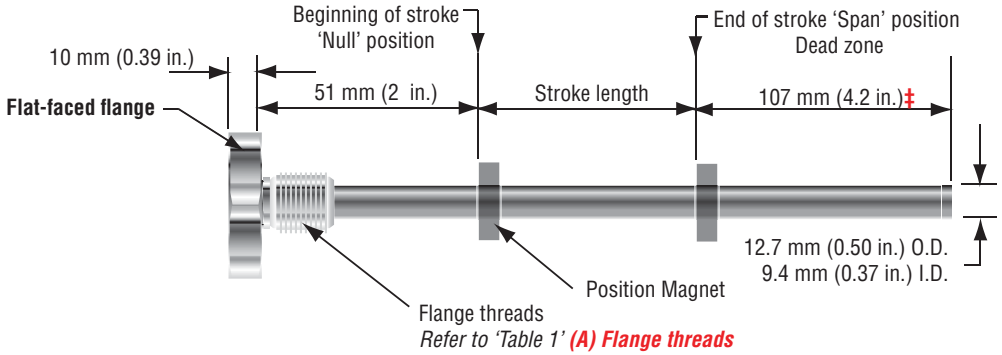
When installed inside the MTS half-inch O.D. pressure housing pipe, the RF flexible sensor housing is suitable for use in hydraulic cylinders, and can simplify installation where installation or mounting space is limited *(see 'Figure 7')*.

Half inch O.D. pressure pipe and flange (Optional)

PIPE AND FLANGE SELECTIONS

The half inch O.D. pressure pipe with flange is designed specifically for R-Series sensors with the model RF flexible housing option. The pressure pipe and flange provide protection from high pressures, as found in hydraulic cylinders, up to 5,000 psi static, 10,000 psi spike. For large cylinders, using the half-inch O.D. pressure pipe requires a larger gun-drilled bore in the piston head/rod assembly. Typically, a 0.75 inch bore is used to match the I.D. of the ring magnet used *(e.g. part no.: 201554 or part no.: 400424).*



‡ *(4.2 in. dead zone = 3.7 in. dead zone of RF sensor +0.5 in. gap)*

Product overview

The extremely robust Temposonics® Rod-style Model RS sensor with super shield housing ensures long-term linear position measurement in the harshest environments. Hermetically sealed with a housing completely made of stainless steel, it meets protection modes IP68 and IP69K requirements and are reliably shielded against corrosion and penetration of dirt and water.

Due to non-contact measuring technology, sensor integration into a hermetically sealed housing is possible. A position magnet moves along the outside of the pressure-resistant sensor pipe and marks the position without mechanical contact.

For level measurement, an optional float can be used. The modular sensor cartridge design enables the customer to choose the specific sensor output configurations to be installed within the super shield housing to best fit their application requirements. The measuring accuracy and all technical data correspond to the features of the sensor selected inside the housing.

A wide choice of interfaces (Analog, Profibus, SSI, CANbus, DeviceNet and EtherCAT) is available. Moreover, integration of ATEX-certified and intrinsically safe sensors is possible with the protective housing. For specific information, refer to the specific R-Series sensor data sheet.

Temposonics® Model RS sensors are made to fit Temposonics® R-Series with analog and digital outputs. Fixed cable and connector versions can be used on the sensor side. When using standard sensors in this housing, you get a cost efficient solution for use in rugged applications. Several design combinations are available to fit your application: M18 or 3/4" UNF mounting flange thread, various housing lengths, and single, dual or triple cable glands.

Serial communication and a simple PC-based user interface enable remote sensor programmability and diagnostics without the need to compromise the housing's protection rating. These features can be used to simplify machine design, sensor setup and field programming.

Product specifications

Model RS rod-style sensor dimension reference

The Temposonics R-Series rod-style sensor (Model RS) offers modular construction, flexible mounting configurations, and easy installation. The Model RS sensor is designed for mounting in applications where high pressure conditions exist, (5000 psi continuous, 10,000 psi spike), such as inside hydraulic cylinders. The Model RS sensor may also be mounted externally in many applications.

MODEL RS, ROD-STYLE SENSOR WITH IP68/IP69K HOUSING

Product overview

G-Series sensors feature a microprocessor-based design with enhanced diagnostics and programmability offering the flexibility to fit a wide range of applications. The sensor's head contains the active signal conditioning and a complete integrated electronics interface. Double shielding is used to ensure EMI protection for unsurpassed reliability and operating safety. G-Series model GH and GP sensors are extremely robust and are ideal for continuous operation under harsh industrial conditions. Backward compatibility with upgraded performance is one of the primary benefits of choosing a G-Series sensor. The G-Series sensor provides the same functionality as our legacy Temposonics I, II and L-Series sensor products which make it an ideal direct replacement.

MTS offers two standard sensor housings, rod and profile extrusion. The rod housing is capable of withstanding high pressures such as those found in hydraulic cylinders. The profile extrusion housing provides convenient mounting options and captive-sliding magnets which utilize slide bearings of special material that reduce friction, and help mitigate dirt build up.

Product specifications

Parameters	Specifications
OUTPUT	
Measured output variables:	Position
Resolution:	Analog: Infinite (restricted by output ripple) **Digital Pulse:** 0.1, 0.01 and 0.005 mm (controller dependent)
Update times:	Analog: < 1 ms (typical) Digital (Controller dependent, design reference = (null + stroke+ dead zone) inches x 10.0 µsec/in. x (number of circulations):
Linearity deviation:	< ± 0.02%full stroke (minimum ± 50 µm)
Repeatability:	< ± 0.001% full stroke (minimum ± 2.5 µm)

Analog Outputs:	**Voltage (Fully adjustable):** 0 to 10, 10 to 0, -10 to +10, +10 to -10 Vdc (minimum controller load > 5k ohms) **Current (Fully Adjustable):** 4(0) to 20 mA, 20 to 4(0) mA (Minimum/maximum load, 0/500 ohms)
Digital-Pulse Outputs:	Start/Stop or Pulse Width Modulation (PWM)
Stroke Lengths:	**GP (Profile style):** Analog: 50 to 2540 mm (2 to 100 in.)Δ Digital: 50 to 5080 mm (2 to 200 in.) **GH (Rod style):** Analog: 50 to 2540 mm (2 to 100 in.)Δ Digital: 50 to 7620 mm (2 to 300 in.) Δ *Contact factory for stroke lengths longer than 2540 mm (100 in.) for Analog outputs*
ELECTRONICS	
Operating voltage:	**+24 Vdc nominal:** 20.4 - 28.8 Vdc standard +9 to +28.8 Vdc optional **Polarity protection:** up to -30 Vdc **Over voltage protection:** Up to 36 Vdc **Dielectric withstand voltage:** 500 Vdc (DC ground to machine ground).
Setpoints:	**Setpoint adjustment (Null/Span):** 100% of electrical stroke length, 50 mm (2 in.) min. distance between setpoints.

Parameters	Specifications
ENVIRONMENTAL	
Operating conditions:	**Operating temperature:** -40 °C (-40 °F) to 80 °C (176 °F) 85 °C (185 °F) max.‡ ‡ *Contact factory for high temperature applications.* **Relative humidity:** 90% no condensation
EMC test:	**Emissions:** IEC/EN 61000-6-3 **Immunity:** IEC/EN 61000-6-2 IEC/EN 61000-4-2/3/4/5/6/8, level 3/4 criterium A, CE qualified
Shock rating:	100 g (single hit)/ IEC standard 68-2-27 (survivability)
Vibration rating:	15 g (30 g with HVR option)/10 to 2000 Hz, IEC standard 68-2-6 (operational)
WIRING	
Connection type:	6-pin male D60 (M16) connector or integral cable
PROFILE STYLE SENSOR (MODEL GP)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connector/cable exit)
Sealing:	IP 65
Sensor extrusion:	Aluminum (Temposonics profile style)
Mounting:	Any orientation, adjustable mounting feet or T-slot nut (M5 threads) in bottom groove
Magnet types:	Captive-sliding magnet or open-ring magnet
ROD STYLE SENSOR (MODEL GH)	
Electronic head:	Aluminum housing with diagnostic LED display (LEDs located beside connector/cable exit)
Sealing:	IP 67 or IP 68 for integral cable models
Sensor rod:	304L stainless steel
Operating pressure:	350 bar static, 690 bar peak (5000 psi static, 10,000 psi peak)
Mounting:	Any orientation. Threaded flange M18 x 1.5 or 3/4 - 16 UNF-3A
Typical mounting torque:	45 N-m (33 ft. - lbs.)
Magnet types:	Ring magnet, open-ring magnet, or magnet float

Output options

G-Series profile-style and rod-style sensors are available in analog and digital-pulse outputs. The G-Series sensor can also provide a square wave neuter output to support legacy Temposonics I, II, and L-Series product backward compatibility.

ANALOG OUTPUTS (VOLTAGE/CURRENT)

G-Series analog sensors provide direct signals, including voltage (0 to 10 Vdc or -10 to +10 Vdc, forward or reverse acting) and current (4 to 20 mA, or 0 to 20 mA, forward or reverse acting). *(See 'Figure 1').* Both voltage and current outputs allow full adjustments of null and span setpoints, (minimum 2 in. between setpoints). Since the outputs are direct, no signal-conditioning electronics are needed when interfacing with controllers or meters.

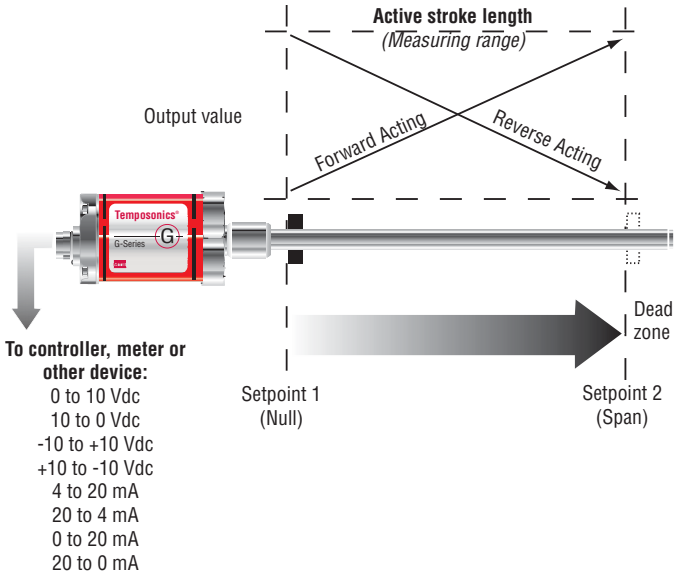

Figure 1. Single magnet analog output diagram

DIGITAL-PULSE OUTPUTS (START/STOP AND PWM)

G-Series digital-pulse sensors provide either PWM (Pulse Width Modulation) or Start/Stop output signals *(see 'Figure 2').* For Start/Stop, the sensor requires a start signal from a controller or interface module to initiate the measurement cycle. The sensor generates a stop signal at the end of the measurement cycle that is used to stop the controller's counter clock.

The elapsed time between the start and stop signals is directly proportional to the magnet's position along the active stroke length. The controller can calculate the absolute position of the magnet from the time value and the sensor's unique gradient value, (inverse of the speed for the sonic strain pulse traveling in the sensor's waveguide).

For PWM output, the elapsed time of the measurement cycle is represented as a varying pulse width of the output signal. The duration of the pulse is directly proportional to the magnet's position along the active stroke length. When operated in the PWM mode the sensor can be configured for internal interrogations or external interrogations. Using external interrogations, a signal is required from the controller or interface module to initiate every measurement cycle (i.e. same as Start/Stop). When using the mode for internal interrogations, no signal is needed from the controller as the sensor itself initiates the next measurement cycle upon the completion of the current cycle. Sensor resolution can be improved by using multiple back to back measurement cycles that are grouped together to generate a single PWM output signal.

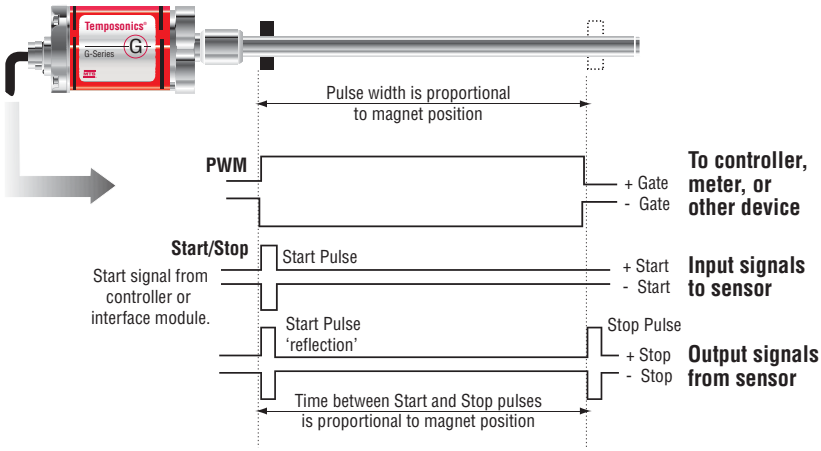

Figure 2. Direct Start/Stop and PWM output diagram

Using multiple measurement cycles in this fashion is referred to as circulations. Setting the sensor to use 2 circulations improves the measurement resolution 2 times. Likewise, using 3 circulations improves the resolution 3 times, and so on. When using multiple circulations the resulting pulse width is longer, indicating the total time elapsed for all of the circulations added together. Once this elapsed time is measured by the counter clock in the controller, the time value is divided by the number of circulations used. The result can then be divided by the sensor's gradient value to determine the magnet's absolute position.

Using multiple circulations will slow down the sensor's update time. However, using multiple circulations has the same effect for improving the measured resolution as it would be to increase the frequency of the counter clock in the controller (Xtal [MHz]), as indicated in the equation below.

$$\textit{Resolution (in.)} = \frac{1}{\textit{(gradient µs/in.) x (Xtal [MHz]) x (\# of circulations)}}$$

Enhanced monitoring and diagnostics

SENSOR STATUS AND DIAGNOSTIC DISPLAY

Diagnostic LEDs (green/red) located beside the connector or cable exit *(see 'Figure 3')*, provide basic visual monitoring for normal sensor operation and troubleshooting.

Figure 3. G-Series sensor diagnostic LEDs

Green	Red	Operation status/mode
OFF	OFF	No power to sensor
OFF	ON	Self-diagnostic error
ON	OFF	Normal sensor function
ON	ON	Magnet not detected
ON	FLASHING	Missing external Start/interrogation signal
FLASHING	OFF	Serial programming mode
FLASHING	ON	Magnet signal is weak
FLASHING	FLASHING	Supply voltage beyond limits (high or low)

Table 1. Diagnostic LED codes

Advanced communication and programmability

SENSOR FIELD PROGRAMMING AND G-SERIES PC PROGRAMMING KITS

Temposonics G-Series Analog and Digital-pulse output sensors are pre-configured at the factory by model number designation. For many applications, normal sensor installation and operation does not require additional adjustment.

If however, sensor parameter changes are required in the field, MTS has developed the *'G-Series Analog PC Programming Kits', part no. 253311-1* and *part no. 253312-1 (see 'Figure 4')* which can be purchased separately to easily program the sensor.

Figure 4. G-Series PC Programming Kit, part no. 253311-1 (Analog) or 253312-1 (Digital-pulse) outputs

G-Series PC setup software is shipped with the sensor and can also be downloaded from www.mtssensors.com. You can use the PC setup software to configure, diagnose, monitor and program your G-Series sensor in the field without opening the sensor's electronics housing.

This can simplify installation and commissioning, saving valuable time. Keeping the sensor electronics isolated ensures that seal integrity and the highest product reliability are maintained.

G-Series PC Programming Kits (part no.: 253311-1 and 253312-1) include the following components:

- Wall adapter style power supply (24 Vdc output)
- USB Serial converter box with USB cable to connect to PC
- Two connection cables:
  - Cable for sensor ordered with the D60 integral connector option.
  - Cable with quick connects for sensor ordered with the integral cable option.
- G-Series PC Setup software, on CD-ROM (for Windows XP or higher) Software

Software upgrades can be downloaded free of charge from the MTS Sensors website at http://www.mtssensors.com.

G-Series PC Setup and Configuration Software Interface

VISUAL SOFTWARE INTERFACE

The G-Series PC Setup and configuration software provides a user-friendly interface *(see 'Figure 5')* along with the sensor's advanced technology enables the operator to take advantage of the following features:

- Built-in serial interfaces for robust hard-wired serial communication, (RS-422 for digital-pulse output and RS-485 for analog output).
- Remote programmability for operational modes and sensor parameters as shown below.

Analog output	Digital-pulse output
Voltage or current output mode	Start/Stop or PWM output mode
Voltage or current output range	Internal or external interrogation mode when using the PWM mode
Full adjustment for Null and Span setpoints	Number or circulations (1 to 20) when using the PWM mode

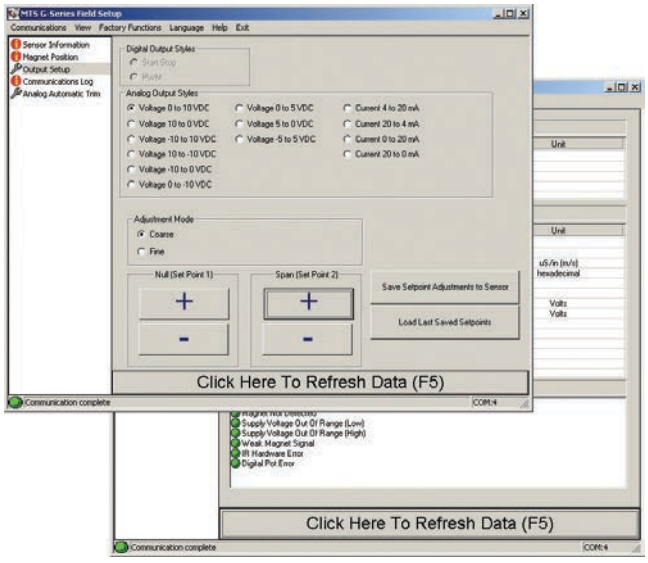

Figure 5. G-Series PC setup software interface examples

G-SERIES ANALOG HANDHELD PROGRAMMER ACCESSORY

Programming for your G-Series analog output sensor can be achieved in the field using the G-Series Analog Handheld Programmer accessory, part no. 253853 *(see 'Figure 6')*.

Figure 6. G-Series Analog Handheld Programmer (part no.: 253853). Front and back views shown.

Using the G-Series Analog Handheld Programmer the magnet positions, and corresponding output values, can be adjusted for the beginning of stroke (Setpoint 1) and for the end of stroke (Setpoint 2) that is actually needed for the specific application. These adjustments are easily done, even when the sensor is not directly accessible, by connecting the programmer to the sensor's integral cable or extension cable. Additionally, the programmer has it's own red and green LEDs to provide a remote display of the sensor's LEDs, used for indicating the sensor status and error diagnostics.

For detailed information refer to the G-Series Analog Handheld Programmer Operating Instructions (document part no. 551024) available in PDF format at www.mtssensors.com.

R05
integral cable option

Figure 9. G-Series Model GP Profile-style sensor dimension reference (Shown with the ***R05*** integral cable option)

Standard magnet selections, mounting and installation (Model GP)

Temposonics Model GP profile-style sensors offer two basic mounting methods; side grooves for use with mounting feet or a bottom groove that accepts special T-Slot nuts. Both the mounting feet and T-Slot nuts can be positioned along the sensor extrusion to best secure the sensor for each particular application.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Model GH rod-style sensor dimension references

The Temposonics G-Series rod-style sensor (Model GH) offers modular construction, flexible mounting configurations, and easy installation. The Model GH sensor is designed for mounting in applications where high pressure conditions exist (5000 psi continuous, 10,000 psi spike) such as inside hydraulic cylinders. The Model GH sensor may also be mounted externally in many applications.

Stroke-dependent Dead Zones:	
Stroke length:	**Dead zone:**
50 mm (2 in.) - 5000 mm (197 in.)	63.5 mm (2.5 in.)
5005 mm (197.1 in.) - 7620 mm (300 in.)	66 mm (2.6 in.)

MODEL GH, ROD-STYLE SENSOR WITH RING MAGNET (MAGNET ORDERED SEPARATELY)

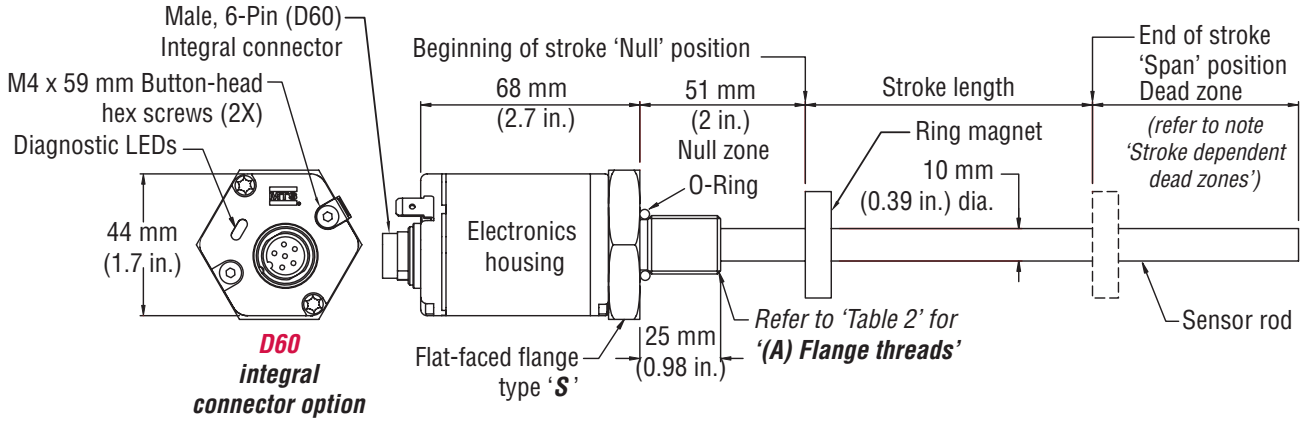

Figure 10. Model GH Rod-style sensor dimension reference (shown with ***D60*** integral connector option)

MODEL GH, ROD-STYLE SENSOR WITH 6-PIN DIN MATING CABLE CONNECTOR (MAGNET ORDERED SEPARATELY)

Drawing is for reference only, contact applications engineering for tolerance specific information.

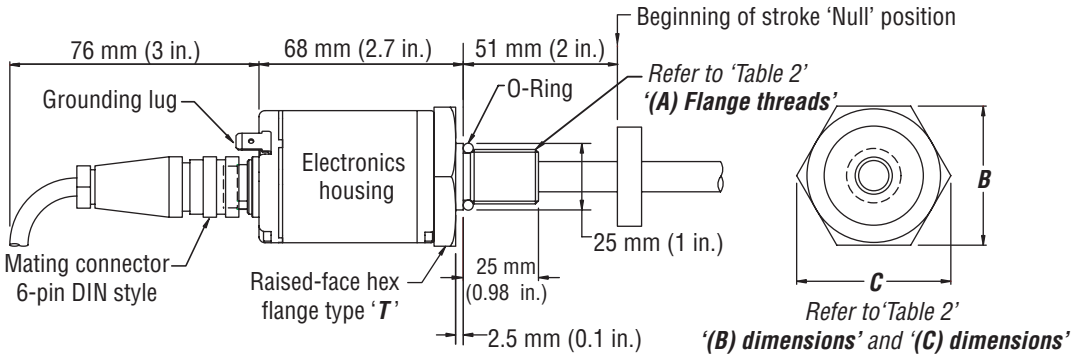

Figure 11. Model GH Rod-style sensor dimension reference (shown with mating cable connector)

Housing style Flange type	Description	(A) Flange threads	(B) Dimensions	(C) Dimensions
T	US customary threads with raised-face flange	3/4" - 16 UNF-3A	1.75 in.	2 in.
S	US customary threads with flat-faced flange	3/4" - 16 UNF-3A	1.75 in.	2 in.
M	Metric threads with flat-faced flange	M18 x 1.5	46 mm	53 mm

Table 2. Model GH Rod-style sensor housing style and flange type references

Standard magnets, mounting and installation (Model GH)

Magnets must be ordered separately with Model GH position sensors. The standard ring magnet (part number 201542-2) is suitable for most applications.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Models GP and GH connections and wiring

STANDARD MALE (D60) 6-PIN DIN INTEGRAL CONNECTOR (M16)

Male, 6-pin (D60) integral connector pin-out as viewed from the end of the sensor.

Important Notes:

1. A grounding lug on the end of the sensor is provided for convenient connection to earth ground.
2. Appropriate grounding of cable shield is required at the controller end.
3. For analog output sensors, the yellow wire (pin 3) and green wire (pin 4) provide serial communications. If possible, during sensor installation these wires should be placed for easy access if future programming or diagnostics are needed. When these wires are not used, they should be isolated with electrical tape to avoid unintended contact with other nearby wires or machine surfaces.

Pin Number	Wire Color	Function / Digital-pulse outputs	Function / Analog outputs
1	Gray	(-) Gate for PWM (-) Stop for Start/Stop or programming (RS-422 TX-)	0 to 10, -10 to +10 Vdc or 4 to 20 mA, 0 to 20 mA or reverse acting: 10 to 0, 10 to -10 Vdc or 20 to 4 mA, 20 to 0 mA
2	Pink	(+) Gate for PWM (+) Stop for Start/Stop or programming (RS-422 TX+)	Return for pin 1
3	Yellow	(+) Interrogation for PWM (+) Start for Start/Stop or Programming (RS-422 RX+)	Programming (RS-485+)
4	Green	(-) Interrogation for PWM (-) Start for Start/Stop or Programming (RS-422 RX-)	Programming (RS-485-)
5	Red or Brown	Supply voltage (+Vdc)	Supply voltage (+Vdc)
6	White	DC ground (for supply)	DC ground (for supply)

Table 2. Wiring, Male, 6-pin (D60) integral connector

Retrofit/replacement references - integral adapter cables with in-line connectors

Tables 4 and 5 describe a variety of retrofit connection options for analog and digital-pulse sensors to provide direct backward compatibility for your application.

ANALOG OUTPUT

Important Notes (Table 4):

1. This format used to show the voltage and current output range is: [Value at Null (Setpoint 1] to [Value at Span (setpoint 2)]. Not all of the available output ranges for voltage are shown.
2. When replacing a L-Series sensor with a G-Series sensor, and reverse-acting output is being used, the wire connections must be changed at the controller. Refer to the *G-Series Cross Reference, document part no.: 550967* for detailed information.
3. If possible, during sensor installation, these wires should be placed for easy access if future programming or diagnostics are needed. When these wires are not used, they should be isolated with electrical tape to avoid unintended contact with other nearby wires or machine surfaces.

Table 4. Intergal adapter cable connections (analog output)

DIGITAL-PULSE (START/STOP OR PWM) OUTPUTS

Important Notes (Table 5):

The G-Series sensor can provide a square wave neuter output for backwards compatibility to replace Temposonics I, Temposonics II, and L-Series sensors that produced a neuter output signal. The neuter output option was used for connection to the Analog Output module (AOM), Digital Interface Box (DIB), and to some custom interface/controllers. Reference the G-Series Cross Reference, document part no. 550967, for neuter output connection information, including adapter cables and field-installed connections.

‡ When using PWM output with internal interrogation, both interrogation input signals are not used. Therefore, the designated connector pin(s) can be left unconnected or connected to ground.

Digital-pulse output connections (Start/Stop or PWM)

Models GP and GH Sensors
Ordering Information

G														
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

SENSOR MODEL = G [ ] 1-2

GP = Profile style

GH = Hydraulic rod style

HOUSING STYLE = [ ] 3

Model GP profile-style sensor (includes one magnet):

S = Captive-sliding magnet with ball joint at top (part no. 252182)

V = Captive-sliding magnet with ball joint at front (part no. 252184)

M = Open-ring magnet (part no. 251416-2)

Model GH rod-style sensor (magnet(s) must be ordered separately):

T = US customary threads, raised-faced flange and pressure tube, standard

U = Same as option "T", except uses fluoroelastomer seals for the electronics housing

B = Sensor cartridge only (no flange and pressure tube, stroke length < 1830 mm (72 in.))

S = US customary threads, flat-faced flange and pressure tube, standard

H = Same as option "S", except uses fluoroelastomer seals for the electronics housing

M = Metric threads, flat-faced flange and pressure tube, standard

V = Same as option "M", except uses fluoroelastomer seals for the electronics housing

STROKE LENGTH = [ ][ ][ ][ ][ ] 4-8

_ _ _ _ M = Millimeters *(Encode in 5 mm increments)*

_ _ _ . _ U = Inches and tenths *(Encode in 0.1 in. increments)*

Stroke Length Notes:

1. Rod-style sensor (model GH) Voltage or Current = 50 mm (2 in.) - 2540 mm (100 in.) *(See 'Note 6' on page 16).*
2. Rod-style sensor (model GH) Digital-pulse = 50 mm (2 in.) - 7620 mm (300 in.)
3. Profile-style sensor (model GP) Voltage or Current = 50 mm (2 in.) - 2540 mm (100 in.) *(See 'Note 6' on page 16).*
4. Profile-style sensor (model GP) Digital-pulse = 50 mm (2 in.) - 5080 mm (200 in.)

CONNECTION TYPE = [ ][ ][ ] 9-11

Integral connector:

D60 = 6-pin DIN (M16), male, standard

MS0 = 10-pin MS Style male

Integral cables:

R _ _ = Integral cable, PVC jacket, pigtail termination

F _ _ = Integral cable, black polyurethane jacket with pigtail termination *(See 'Note 1' on page 16)*

Cable length:
Encode in feet if using US customary stroke length
Encode in meters if using metric stroke length

→ **_ _** = 3 (**03**) to 98 (**98**) ft. *or* 1 (**01**) to 30 (**30**) meters.

Cable Length Note:

MTS recommends the maximum integral cable length to be 10 meters (33 ft.). Cables greater than 10 m (33 ft.) in length are available, however, proper care must be taken during handling and installation.

RB1 = 1 ft. inetgral cable, PVC jacket, with male in-line RB connector †

FM1 = 1 ft. inetgral cable, PUR jacket, with male in-line 10-pin MS connector ‡

FD1 = 1 ft. inetgral cable, PUR jacket, with male in-line 6-pin DIN (M16) connector

RB2 = 5 ft. inetgral cable, PVC jacket, with male in-line RB connector †

FM2 = 5 ft. inetgral cable, PUR jacket, with male in-line 10-pin MS connector ‡

FD2 = 5 ft. inetgral cable, PUR jacket, with male in-line 6-pin DIN (M16) connector

INPUT VOLTAGE = [ ] 12

1 = +24 Vdc (+20% - 15%) standard

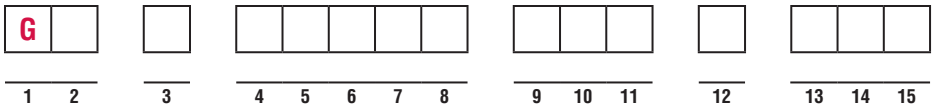
2 = +9 Vdc to +28.8 Vdc *(See 'Note 4' on page 16)*

A = Same as option '**1**' except includes the High Vibration-Resistant (HVR) option for Model GH only, stroke range = 50 mm (2 in.) to 2000 mm (78.7 in.), Refer to *'HVR Option' (See 'Note 8' on page 16).*

B = Same as option '**2**' except includes the High Vibration-Resistant (HVR) option for Model GH only, stroke range = 50 mm (2 in.) - 2000 mm (78.7 in.), Refer to *'HVR Option. (See 'Note 8' on page 16)*

OUTPUT *(13 - 15)* = [ ][ ][ ] 13-15

2 to 3 digit code defined by the output option selected. Output options continued on next page.



Choose output option from below (2 to 3 digit code) = **13 - 15**

Choose a value described below to encode in 2 to 3 digits (sensor part number boxes 13-15)

Voltage

V0 = 0 to +10 Vdc
V1 = +10 to 0 Vdc
V2 = -10 to +10 Vdc
V3 = +10 to -10 Vdc
V4 = 0 to +5 Vdc
V5 = +5 to -5 Vdc
V6 = -10 to 0 Vdc
V7 = 0 to -10 Vdc
V8 = -5 to +5 Vdc
V9 = +5 to 0 Vdc

Current

A0 = 4 to 20 mA
A1 = 20 to 4 mA
A2 = 0 to 20 mA
A3 = 20 to 0 mA

Digital pulse

R0 X = Start/Stop. If more than one magnet, the X denotes the number of magnets in hexadecimal (2 to F).
RF X = Start/Stop with Closed-Error Signal Utility (*see 'Note 7'*). If more than one magnet, the X denotes the number of magnets in hexadecimal (2 to F).
DI X = PWM, internal interrogation, the X denotes the number of circulations in hexadecimal (1 to F), and G = 16 to K = 20 circulations.
FI X = PWM, internal interrogation with Closed Error Signal Utility *(see 'Note 7')*.The X denotes the number of circulations in hexadecimal (1 to F), and G = 16 to K = 20 circulations.
DE X = PWM, external interrogation, the X denotes the number of circulations in hexadecimal (1 to F), and G = 16 to K = 20 circulations.
FE X = PWM, external interrogation with Closed Error Signal Utility *(see 'Note 7')*.The X denotes the number of circulations in hexadecimal (1 to F), and G = 16 to K = 20 circulations.
N0 X = Start/Stop output wired for square wave neuter ("+ Stop" used for neuter output pulse). If more than one magnet, the X denotes the number of magnets in hexadecimal (2 to F) (*see 'Note 5'*).

Notes:

1. Polyurethane jacketed cable for use where higher resistance to moisture, oil, and other environmental conditions are required.
2. Wired for analog, digital-pulse, or neuter, depending on output selected. For Temposonics II and model LH replacements/ retrofits only. Refer to G-Series Cross Reference part numbers 550967 and 550956 for more information.
3. Wired for analog and digital-pulse depending on output selected. Use for model LH replacements or retrofits. Refer to the G-Series Cross Reference document, part number 550956 for more information.
4. Selected when retrofitting sensors with ± 15 Vdc input voltages.
5. For Temposonics I, Temposonics II, and model LH neutered output sensor retrofits only. Refer to the G-Series Cross Reference documents, part numbers 550956 and 550967 for more information.
6. Stroke lengths longer than 2540 mm (100 in.) for analog outputs are available on a custom basis.
7. When shock and vibration events exceed the sensor specification rating, the Closed Error Signal Utility (option "F") will rovide either PWM or Start/ Stop outputs, which are backwards compatible to interface cards/controllers designed for the legacy Temposonics II and L-Series sensor models. For more information about the Closed Error Signal Utility (option "F"), refer to Application Note, part number 550983.
8. The High Vibration-Resistant (HVR) option provides the model GH rod-style sensors with increased resistance to shock and vibration for use in heavy duty machinery. Refer to "G-Series and R-Series Sensors for High Shock and Vibration Applications", part no. 551073 for more information.

Model GT3 rod-style redundant position sensor

FEATURES

- Offers Redundancy for Enhanced Safety Applications
- Linear, Absolute Measurement
- Contains Up to Three Separate, Independent Measuring Systems in a Single Compact Housing
- Non-Contact Sensing Technology
- Superior Accuracy, Linearity Deviation Less Than 0.02%
- Repeatability Within 0.001%
- Fully Adjustable Analog Outputs (Voltage or Current) Within: -10 to +10 Vdc or 0 to 20 mA

BENEFITS

- Rugged Industrial Sensor
- Compact Design with a Standard Size 10 mm (0.39 in.) O.D. Stainless-Steel Rod
- Uses Standard Mounting

APPLICATIONS

- Ideal for High-Safety Applications Requiring Redundancy
- Continuous Operation In Harsh Industrial Conditions
- High Pressure Conditions

TYPICAL INDUSTRIES

- Power Plants
- Water and Wind Turbine Pitch Settings
- Marine Propellers
- Ship Control Systems
- Floodgate Control

ISO 9001 CERTIFIED

G-Series GT Redundant

Product overview

G-Series model GT sensors are extremely robust and are ideal for continuous operation under harsh industrial conditions. The rod housing is capable of withstanding high pressures such as those found in hydraulic cylinders. G-Series redundant sensors provide accurate, linear-position measurement for applications that benefit from redundancy due to safety relevant functions.

G-Series Redundant sensors feature two or three independent measuring systems contained in one compact housing. Each measuring system contains its own channel with sensor element, power and evaluation electronics and output signal. Each channel has it's own output connector or cable.

All sensor elements are integrated in one pressure proofed, high-grade steel rod. Rod and housing style feature the approved standard dimensions with 10 mm (0.39 in.) diameter rod and 3/4-16 UNF or M18 x 1.5 threaded hex flanges. The redundant sensor easily installs in applications measuring linear movements of control valves, linear drives, fluid cylinders and machines.

Product specifications

Parameters	Specifications
OUTPUT	
Measured output variables:	Position
Resolution:	**Analog:** Infinite (restricted by output ripple)
Update times:	< 1 ms (typical)
Linearity deviation:	< ± 0.02% full stroke (minimum ± 50 µm)
Repeatability:	< ± 0.001% of full stroke (minimum ± 2.5 µm)
Hysteresis:	< 4 µm

Operating voltage:	**+24 Vdc nominal:** -15 or +20% **Polarity protection:** up to -30 Vdc **Overvoltage protection:** up to 36 Vdc **Current drain:** 100 mA typical per channel **Dielectric withstand voltage:** 500 Vdc (DC ground to machine ground)
Setpoints:	**Setpoint adjustment (Null/Span):** 100% of electrical stroke length, 50 mm (2 in.) minimum distance between setpoints.

Parameters	Specifications
ENVIRONMENTAL	
Operating conditions:	**Operating temperature:** -40 °C (-40 °F) to +75 °C (167 °F) **Relative humidity:** 90% no condensation
EMC test:	**Emissions:** IEC/EN 61000-6-3 **Immunity:** IEC/EN 61000-6-2 IEC/EN 61000-4-2/3/4/5/6/8, level 3/4 criterium A, CE qualified
Shock rating:	100 g (single hit)/ IEC standard 68-2-27 (survivability)
Vibration rating:	5 g /10 to 2000 Hz, IEC standard 68-2-6 (operational)
WIRING	
Connection type:	6-pin male D60 (M16) connector or integral cable
ROD STYLE SENSOR (MODEL GT2/GT3)	
Electronic head:	Aluminum housing
Sealing:	IP 67
Sensor rod:	304L stainless steel
Operating pressure:	350 bar static, 690 bar peak (5000 psi static, 10,000 psi peak)
Mounting:	Any orientation. Threaded flange M18 x 1.5 or 3/4 - 16 UNF-3A
Typical mounting torque:	45 N-m (33 ft. - lbs.)
Magnet types:	Ring magnet, open-ring magnet, or magnet float

Output options

G-Series rod-style redundant sensors are available with analog (voltage and current) outputs. The G-Series redundant, model GT2 sensor provides two output channels, and model GT3 provides three output channels.

ANALOG (VOLTAGE/CURRENT)

G-Series analog sensors provide direct signals, including voltage (0 to 10 Vdc or -10 to +10 Vdc, foward or reverse acting) and current (4 to 20 mA, or 0 to 20 mA, forward or reverse acting). *(see 'Figure 1')*. Both voltage and current outputs allow full adjustments of null and span setpoints (minimum 2 in. between setpoints). Since the outputs are direct, no signal-conditioning electronics are needed when interfacing with controllers or meters.

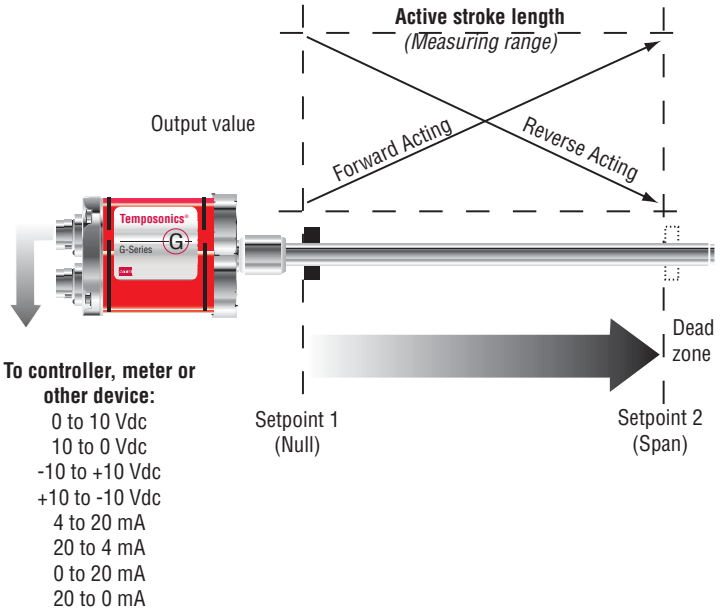

Figure 1. Single magnet analog output diagram

Advanced communications and programmability

SENSOR FIELD PROGRAMMING AND G-SERIES PC PROGRAMMING KIT

Temposonics G-Series Redundant sensors are preconfigured at the factory by model code designation. For many applications no adjustments are required for normal sensor installation and operation. If, however, sensor parameter changes are desired while in the field, the G-Series Redundant sensor is easily programmed by using the G-Series PC Programming kit *(see 'Figure 2')*.

Figure 2. G-Series PC Programming Kit, part no. 253311-1

G-Series PC setup software is shipped with the sensor and can also be downloaded from www.mtssensors.com. You can use the PC setup software to configure, diagnose, monitor and program your G-Series sensor in the field without opening the sensor's electronics housing.

This can simplify installation and commissioning, saving valuable time. Keeping the sensor electronics isolated ensures that seal integrity and the highest product reliability are maintained.

G-Series Analog PC Programming Kit (part no.: 253311-1)includes the following components:

- Wall adapter style power supply (24 Vdc output)
- USB Serial converter box with USB cable to connect to PC
- Two conection cables:
  - Cable for sensor ordered with the D60 integral connector option.
  - Cable with quick connects for sensor ordered with the integral cable option.
- G-Series Analog PC Setup software, on CD-ROM (for Windows XP or higher)

G-Series PC Setup and Configuration Software Interface

VISUAL SOFTWARE INTERFACE

The G-Series PC Setup and configuration software provides a user-friendly interface *(see 'Figure 3')* along with the sensor's advanced technology enables the operator to take advantage of the following features:

- Built-in serial interfaces for robust hard-wired serial communication (RS-485).
- Remote programmability for operational modes and sensor parameters *(see 'Table 1)*.

G-Series PC Setup and Configuration Software Interface (Cont.)

ANALOG (VOLTAGE/CURRENT) OUTPUT FEATURES
Voltage or current output mode
Voltage or current output range
Full adjustment for Null and Span setpoints

Table 1. Remote programmability and operational modes

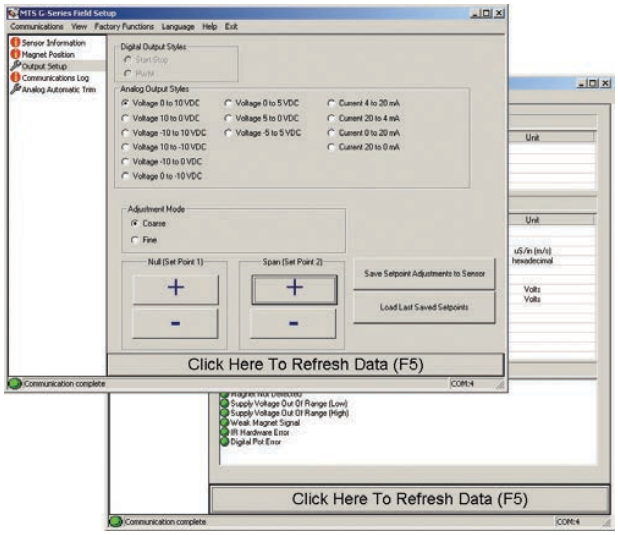

Figure 3. G-Series PC setup software interface examples

G-SERIES HANDHELD PROGRAMMER ACCESSORY FOR ANALOG OUTPUT

Programming for your G-Series analog output sensor can be achieved in the field using the G-Series Analog Handheld programmer accessory, part no. 253853 *(see 'Figure 4')*.

Figure 4. G-Series Analog Handheld Programmer (part no.: 253853). Front and back views shown.

Using the G-Series Analog Handheld Programmer, magnet positions and corresponding output values can be adjusted for the beginning of stroke (Setpoint 1) and for the end of stroke (Setpoint 2) that is actually needed for the specific application. These adjustments are easily done, even when the sensor is not directly accessible, by connecting the programmer to the sensor's integral cable or extension cable. Additionally, the programmer has it's own red and green LEDs to provide a remote display of the sensor's status and error diagnostics. For detailed information refer to the G-Series Analog Handheld Programmer Operating Instructions *(document part no.: 551024)* available at http://www.mtssensors.com.

Model GT2 rod-style sensor dimension references

Note:

When mounting the sensor, use a basic wrench *(see 'Figure 5')* with a maximum 8 mm (0.31 in.) thickness to ensure tightening torque is only applied to the hex flange and not to the electronics housing.

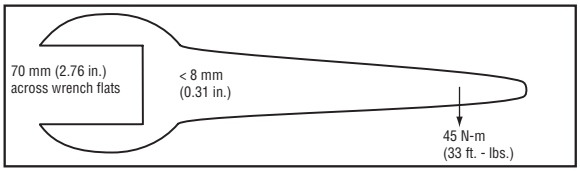

Figure 5. Basic wrench

Temposonics G-Series rod-style sensors (Models GT2/GT3) offer modular construction, flexible mounting configurations, and easy installation. Models GT2/GT3 sensors are designed for mounting in applications where high pressure conditions exist (5000 psi continuous, 10,000 psi spike), such as inside hydraulic cylinders *(see 'Figure 8')*. Both GT2 and GT3 sensor models can also be mounted externally in many applications.

MODEL GT3 ROD-STYLE SENSOR WITH RING MAGNET (MAGNET ORDERED SEPARATELY)

Drawing is for reference only, contact applications engineering for tolerance specific information.

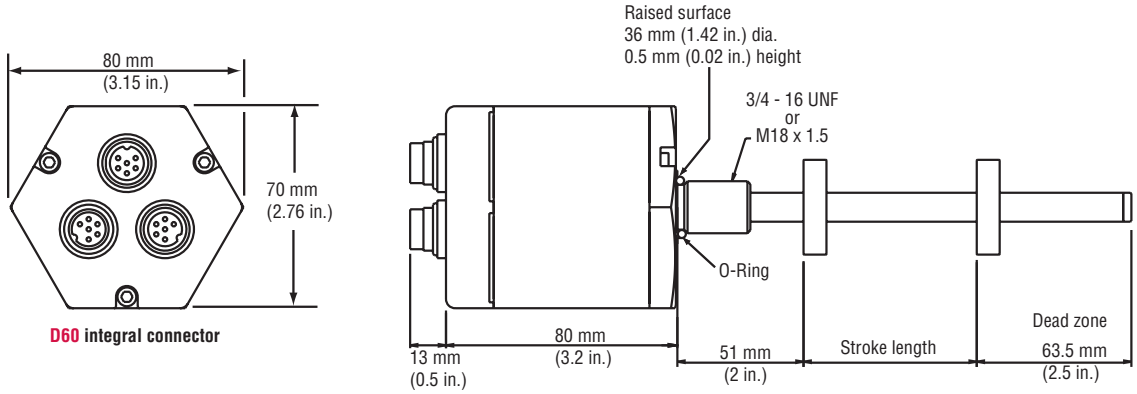

Figure 6. Models GT3 Rod-style sensor dimension reference (shown with ***D60*** integral connection type)

Model GT3 rod-style sensor dimension references

MODEL GT3 ROD-STYLE SENSOR WITH INTEGRAL CABLE (MAGNET ORDERED SEPARATELY)

Drawing is for reference only, contact applications engineering for tolerance specific information.

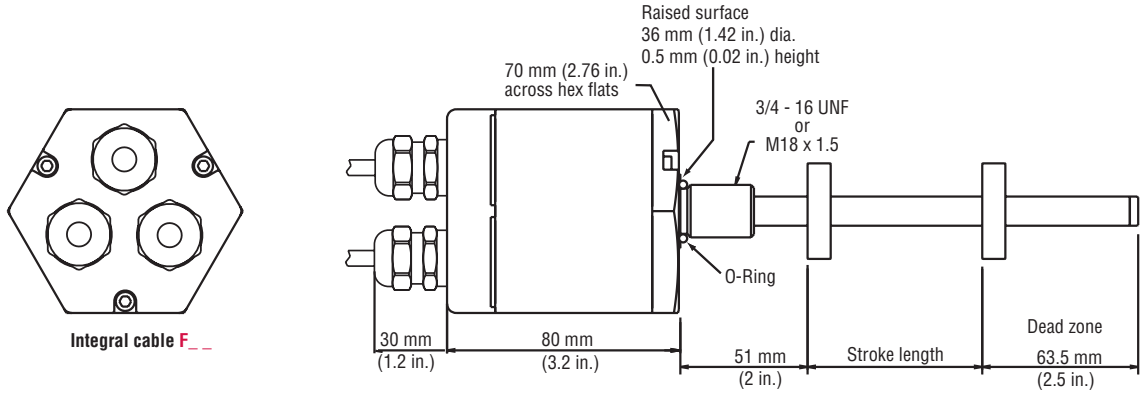

Figure 7. Model GT3 Rod-style sensor dimension reference (shown with integral cable)

Standard magnets, mounting and installation (Model GT2 and GT3)

Magnets must be ordered separately with Model GT2 and GT3 position sensors. The standard ring magnet (part number 201542-2) is suitable for most applications.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Models GT2/GT3 connections and wiring

STANDARD MALE (D60) 6-PIN DIN INTEGRAL CONNECTOR (M16)

Male, 6-pin (D60) integral connector pin-out as viewed from the end of the sensor.

Important Notes:

1. A grounding lug on the end of the sensor is provided for convenient connection to earth ground.
2. Appropriate grounding of cable shield is required at the controller end.
3. For analog output sensors, the yellow wire (pin 3) and green wire (pin 4) provide serial communications. If possible, during sensor installation these wires should be placed for easy access if future programming or diagnostics are needed. When these wires are not used, they should be isolated with electrical tape to avoid unintended contact with other nearby wires or machine surfaces.

Pin Number	Wire Color	Function / Analog output
1	Gray	0 to 10, -10 to +10, or 4 to 20 mA, 0 to 20 mA or reverse acting: 10 to 0, 10 to -10 Vdc or 20 to 4 mA, 20 to 0 mA
2	Pink	Return for pin 1
3	Yellow	Programming (RS-485+)
4	Green	Programming (RS-485-)
5	Red or Brown	Supply voltage (+Vdc)
6	White	DC ground (for supply)

Data Sheet

MTS SENSORS

Document Part Number:
551250 Revision A

Model EH rod-style position sensor
Stroke Length: 50 mm to 2500 mm (2 in. to 100 in.)

FEATURES

- Linear, Absolute Measurement
- Non-Contact Sensing Technology
- Linearity Deviation Less Than 0.02% F.S.
- Repeatability Within 0.001% F.S.
- Two Outputs Available:
  - Analog (Voltage/Current) Forward or Reverse Acting
  - Start/Stop Output
- Simple Sensor Parameter Upload (for Start/Stop)
- Stroke Length Range: 50 mm to 2500 mm (or 2 in. to 100 in.)
- Hermetically-Sealed Stainless Steel For IP69K Ingress Protection
- EMI Shielded and CE Certified

BENEFITS

- Compact Stainless Steel Position Sensor, Designed For Use In Hydraulic Cylinders
  - Standard 10 mm dia. Sensor Rod For Typical Applications
  - Optional 7 mm dia. Sensor Rod For Use In Small Bore Cylinders
- Simultaneous Multi-position Measurements
- Over Voltage Protection to 36 Vdc and Polarity Protection up to -30 Vdc

APPLICATIONS

- Clevis Mounted or Space Limited Cylinder Applications
- Harsh Industrial Conditions
- High-Pressure Washdown
- Gates and Valve Control

TYPICAL INDUSTRIES

- Fluid Power
- Factory Automation
- Steel Mills
- Material Handling and Packaging
- Water Management

ISO 9001 CERTIFIED

Product overview

MTS Sensors continues to establish new performance standards for low-cost, fully-industrial, durable position sensors using the widely preferred magnetostrictive technology. This principle for accurate and non-contact measurement of linear-position sensing was developed 30 years ago by MTS and is used with outstanding success in a large variety of industrial applications.

The Temposonics model EH sensor provides as much performance as you need for your application - you benefit from the advantages of magnetostrictive position measurement at optimum costs.

The Temposonics® Model EH sensor features a pressure resistant sensor rod for direct stroke measurement inside hydraulic cylinders. With its minimized sensor head and either a 7 mm or 10 mm rod, it is the ideal solution when space is critical. For long strokes, the model EH is available with measuring ranges up to 2500 mm (or 100 in.).

The model EH sensor offers completely sealed stainless-steel housing for long life position measurement for rugged environments. When installed with the appropriate mating connector and cable, it features protection up to IP69K and is suitable for high-pressure washdown applications.

Product specifications

Sensor rod:	Stainless Steel 1.4301 / AISI 304
Operating pressure:	**7 mm Rod:** 300 bar static, 450 bar peak (4350 psi static, 6500 psi peak) **10 mm Rod:** 350 bar static, 530 bar peak (5000 psi static, 7700 psi peak)
Mounting:	Any orientation. Threaded flange M18 x 1.5 or 3/4 - 16 UNF-3A
Typical mounting torque:	45 N-m (33 ft. - lbs.)
Magnet types:	Ring magnet, open-ring magnet or magnet float

Outputs

ANALOG (VOLTAGE/CURRENT) OUTPUTS

Analog outputs include voltage (0 to 10 Vdc forward or reverse acting), and current (4 to 20 mA forward or reverse acting). Since the outputs are direct, no signal conditioning electronics are needed when interfacing with controllers or meters *(see 'Figure 1')*.

Analog output ranges:

- 0 to 10 Vdc
- 10 to 0 Vdc
- 0 to 10 Vdc and 10 to 0 Vdc
- 4 to 20 mA
- 20 to 4 mA

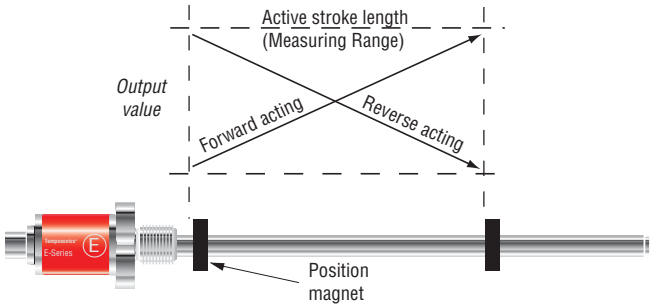

Figure 1. Analog Output signals

DIGITAL (START/STOP) OUTPUTS

The Temposonics E-Series Model EH Start/Stop output sensor requires a start signal from a controller or interface module to initiate the measurement cycle. The sensor generates a stop signal at the end of the measurement cycle that is used to stop the controller's counter clock.

The elapsed time between the Start and Stop signals is directly proportional to the magnet's position along the active stroke length. The controller can calculate the absolute position of the magnet from the time value and the sensor's unique gradient value (inverse of the speed for the sonic pulse traveling in the sensor's waveguide). *(see 'Figure 2')*.

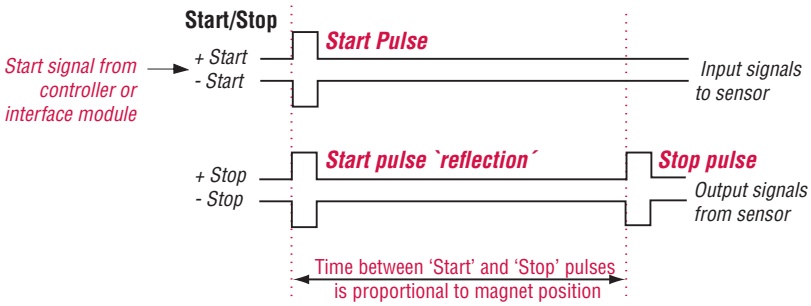

Figure 2. Start/Stop output signals (RS-422 differential pairs)

Dual magnet outputs

MEASUREMENT OPTIONS

E-Series sensors provide options for simultaneous multi-position measurements by using more than one magnet per sensor. When using Start/Stop sensor output the ability to process multiple magnets depends on the capability of the controller or interface module that is used. When using analog type outputs (voltage or current) the sensor is limited to a maximum of two magnets.

For analog output types the options for single-magnet or dual-magnets is specified in the sensor model number when ordered. For single-magnet sensors the sensor's full active stroke length is utilized by the one magnet. For example when using forward-acting outputs, the output is 0% of its value when the magnet is at the null position (start of stroke) and 100% of its value when at the edge of the dead zone (end of stroke), *(see 'Figure 3')*.

However, for dual-magnet sensors the sensor's active stroke length must be shared by the two magnets, and a separation > or = to 75 mm (3 in.) must be maintained between the two magnets (front side of the first magnet to front side of the second magnet). This minimum distance between magnets is needed to maintain proper sensor output. Therefore, for the second magnet the start of stroke (0% output) is set at 75 mm away from the sensor's null position. Likewise, for the first magnet the end of stroke (100% output) is now set 75 mm away from the edge of the dead zone *(see 'Figure 3')*.

The result of using the dual-magnet E-Series options is that the stroke length available for each magnet is 75 mm less (or 3 inches less when specifying stroke length in inches) than the sensor's full active stroke length as indicated in the model number.

When ordering the single-magnet E-Series sensor the minimum stroke length available is 50 mm or 2 inches. However when ordering dual magnet E-Series sensors the minimum stroke length available is 125 mm (i.e. 50 mm minimum, plus 75 mm for the minimum distance between magnets). Likewise, when specifying stroke length in inches the minimum stroke length available is 5 inches (i.e. 2 inch minimum, plus 3 inches for the minimum distance between magnets).

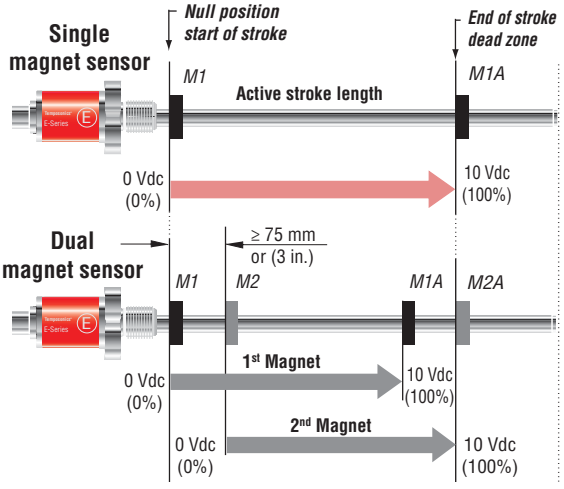

Figure 3. Single and dual magnet measurements

Communication

SENSOR PARAMETER UPLOAD FEATURE

For applications using smart sensor interfaces, the Model EH sensor with Start/Stop output *(Option **R3**)* comes with the ability to perform sensor parameter uploads. This feature replaces the task of entering sensor data manually, saving time and preventing possible entry errors during start-up or for system maintenance.

Note: Start/Stop output (option R3)

When the sensor parameter upload feature is not activated the Start/Stop output (Option **R3**) remains fully compatible with the Start/Stop output (Option **R0**) used in the previous generation E-Series sensor family.

The upload feature supports the following sensor parameters:

- Measuring range
- Offset
- Gradient - (Shown as speed of the sonic-strain pulse (m/s) or inverse speed (µs/in.)
- Status
- Manufacturer number

The sensor's specific parameters can be retrieved by the controller and interface module at any time, via the sensor's Start/Stop signal lines.

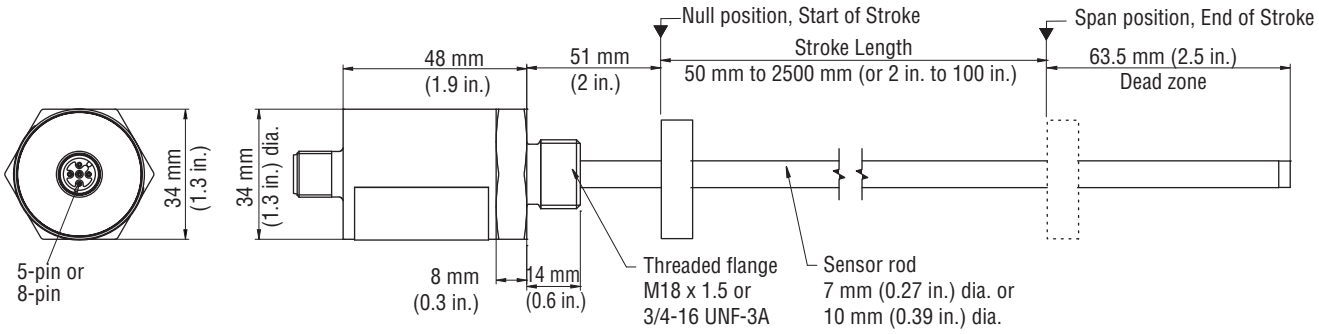
The sensor parameter upload feature requires a customer supplied RS-422 interface. The data format is serial, 4800 Baud, 8-bit data length. Please contact the factory for additional parameter upload protocol details.

Sensor dimension references

Drawings are for reference only, contact applications engineering for tolerance specific information.

The model EH sensor shown in *'Figure* 4' can be ordered with flange styles M18 x1.5 or 3/4 -16 UNF-3A and a 7 mm or 10 mm diameter sensor rod. Magnets must be purchased separately; refer to *'Standard magnet Selections (Model EH)'* for standard magnet ordering information.

MODEL EH



Refer to the model EH sensor ordering information for rod housing and flange types

Figure 4. E-Series model EH sensor dimension reference

Standard magnets, mounting and installation (Model EH)

Magnets must be ordered separately with Model EH rod-style sensors. The standard ring magnet (part number 201542-2) is suitable for most applications.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Connections and wiring (Model EH)

SENSOR INTEGRAL CONNECTOR (D34 AND D84) PINOUT/WIRE COLOR CODES

The E-Series Model EH sensor connects directly to a controller or interface module with the standard male, 5-pin or 8-pin integral connector and an extension cable as described in *'Table 1'* and *'Table 2'*.

Integral D34 connector (male) as viewed from the end of the sensor

Pin no.	Extension cable wire color	Signal/function Analog outputs
1	Brown	+24 Vdc
2	White	Output signal
3	Blue	DC ground (for power return)
4	Black	2nd Output signal (optional)
5	Gray	Ground for signal return

Table 1. Integral D34 sensor connector
(mates with cable connectors 370618 and 370619)

Integral D84 connector (male) as viewed from the end of the sensor

Pin no.	Extension cable wire color	Signal/function Start/Stop outputs
1	White	(+) Start
2	Brown	(-) Start
3	Green	(+) Stop
4	Yellow	(-) Stop
5	Gray	No connection
6	Pink	No connection
7	Blue	+24 Vdc
8	Red	DC Ground (0 Vdc) for power return

Connection types:	**Analog output:** 5-pin (M12) male integral connector **Start/Stop output:** 8-pin (M12) male integral connector
PROFILE-STYLE SENSOR	
Electronic head:	Aluminum housing
Sensor extrusion:	Aluminum (Temposonics profile style)
Mounting:	Adjustable mounting clamps
Magnet types:	Captive-sliding magnets, open-ring magnet or block magnet

Outputs

ANALOG (VOLTAGE/CURRENT) OUTPUTS

Analog outputs include voltage (0 to 10 Vdc forward or reverse acting), and current (4 to 20 mA forward or reverse acting). Since the outputs are direct, no signal conditioning electronics are needed when interfacing with controllers or meters *(see 'Figure 1')*.

Analog output voltages ranges:

- 0 to 10 Vdc
- 10 to 0 Vdc
- 0 to 10 Vdc and 10 to 0 Vdc
- 4 to 20 mA
- 20 to 4 mA

DIGITAL START/STOP OUTPUT

Temposonics E-Series Models EP and EL Start/Stop output sensors require a start signal from a controller or interface module to initiate the measurement cycle. The sensor generates a stop signal at the end of the measurement cycle that is used to stop the controller's counter clock.

The elapsed time between the Start and Stop signals is directly proportional to the magnet's position along the active stroke length. The controller can calculate the absolute position of the magnet from the time value and the sensor's unique gradient value (inverse of the speed for the sonic pulse traveling in the sensor's waveguide). *(see 'Figure 2')*.

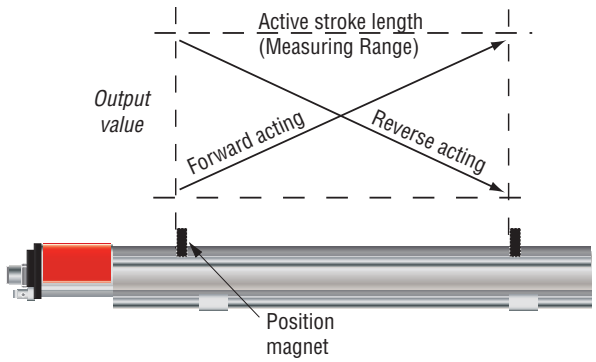

Figure 1. Analog Output signals

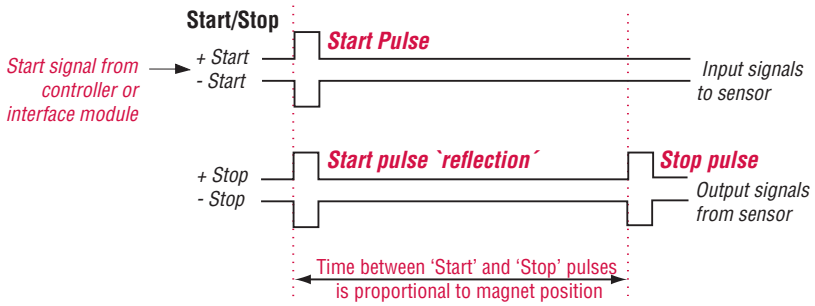

Figure 2. Start/Stop output signals (RS-422 differential pairs)

Dual magnet outputs

MEASUREMENT OPTIONS

E-Series sensors provide options for simultaneous multi-position measurements by using more than one magnet per sensor. When using Start/Stop sensor output the ability to process multiple magnets depends on the capability of the controller or interface module that is used. When using analog type outputs (voltage or current) the sensor is limited to a maximum of two magnets.

For analog output types the options for single-magnet or dual-magnets is specified in the sensor model number when ordered. For single-magnet sensors the sensor's full active stroke length is utilized by the one magnet. For example when using forward-acting outputs, the output is 0% of its value when the magnet is at the null position (start of stroke) and 100% of its value when at the edge of the dead zone (end of stroke), *(see 'Figure 3')*.

However, for dual-magnet sensors the sensor's active stroke length must be shared by the two magnets, and a separation > or = to 75 mm (3 in.) must be maintained between the two magnets (front side of the first magnet to front side of the second magnet). This minimum distance between magnets is needed to maintain proper sensor output. Therefore, for the second magnet the start of stroke (0% output) is set at 75 mm away from the sensor's null position. Likewise, for the first magnet the end of stroke (100% output) is now set 75 mm away from the edge of the dead zone *(see 'Figure 3')*.

The result of using the dual-magnet E-Series options is that the stroke length available for each magnet is 75 mm less (or 3 inches less when specifying stroke length in inches) than the sensor's full active stroke length as indicated in the model number.

When ordering the single-magnet E-Series sensor the minimum stroke length available is 50 mm or 2 inches. However when ordering dual magnet E-Series sensors the minimum stroke length available is 125 mm (i.e. 50 mm minimum, plus 75 mm for the minimum distance between magnets). Likewise, when specifying stroke length in inches the minimum stroke length available is 5 inches (i.e. 2 inch minimum, plus 3 inches for the minimum distance between magnets).

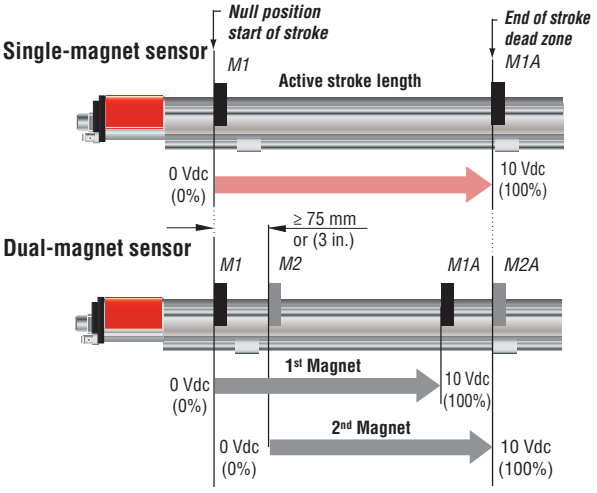

Figure 3. Single and dual magnet measurements

Communication

SENSOR PARAMETER UPLOAD FEATURE

For applications using smart sensor interfaces, the Models EP and EL sensors with Start/Stop output *(Option **R3**)* comes with the ability to perform sensor parameter uploads. This feature replaces the task of entering sensor data manually, saving time and preventing possible entry errors during start-up or for system maintenance.

Note: Start/Stop output (option R3)

When the sensor parameter upload feature is not activated the Start/Stop output (Option **R3**) remains fully compatible with the Start/Stop output (Option **R0**) used in the previous generation E-Series sensors.

The upload feature supports the following sensor parameters:

- Measuring range
- Offset
- Gradient - (Shown as speed of the sonic-strain pulse (m/s) or inverse speed (µs/in.)
- Status
- Manufacturer number

The sensor's specific parameters can be retrieved by the controller/interface module at any time, via the sensor's Start/Stop signal lines.

The sensor parameter upload feature requires a customer supplied RS-422 interface. The data format is serial, 4800 Baud, 8-bit data length. Please contact the factory for additional parameter upload protocol details.

Sensor dimension references

Drawings are for reference only, contact applications engineering for tolerance specific information.

A robust aluminum extrusion forms the sensor housing containing the sensing element and electronics. The position magnet moves along the top of the profile extrusion housing.

Standard magnet selections, mounting and installation (Model EP and EL)

Temposonics Model EP full-size profile-style and EL low height profile-style sensors have side grooves for use with mounting clamps. The mounting clamps can be positioned along the sensor extrusion to best secure the sensor for each particular application.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Connections and wiring (Models EP and EL)

SENSOR INTEGRAL CONNECTOR (D34 AND D84) PINOUT/WIRE COLOR CODES

The E-Series models EP and EL sensors connect directly to a controller or interface module with the standard male, 5-pin or 8-pin integral connector and an extension cable as described in *'Table 1'* and *'Table 2'*.

Attention:

The sensors aluminum housing has an anodic coating which prevents the sensor's mounting clamps from providing the appropriate grounding. A grounding lug (see 'Figure 78') is provided near the connector end of the sensor for a convenient connection to earth ground. The appropriate grounding of the cable shield is also required at the controller end.

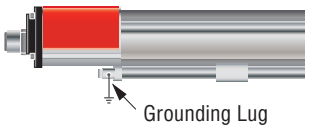

Figure 8. Grounding lug location.

Integral D34 connector (male) as viewed from the end of the sensor

Pin no.	Extension cable wire color	Signal/function analog outputs

E-Series Model ER

Analog and Start/Stop Outputs

Data Sheet

Document Part Number:
550996 Revision E

Model ER position sensor-
Stroke Length: 50 mm to 1500 mm (2 in. to 60 in.)

FEATURES

- Linear, Absolute Measurement
- Non-Contact Sensing Technology
- Linearity Deviation Less Than 0.02% F.S.
- Repeatability Within 0.001% F.S.
- Two Outputs Available:
  - Analog (Voltage/Current) Forward or Reverse Acting
  - Start/Stop Outputs
- Simple Sensor Parameter Upload (for Start/Stop)
- Stroke Length Range: 50 mm to 1500 mm (2 in. to 60 in.)
- Internal Electronics are Sealed for IP67 Ingress Protection
- EMI Shielded and CE Certified

BENEFITS

- Rugged, Cost Effective, Precise and Durable Non-wear Alternative to Linear Potentiometers
- Extendable and Retractable Dual Rod Ends
- The Magnet is Contained and Protected Inside The Sensor Housing
- Over Voltage Protection to 36 Vdc and Polarity Protection up to -30 Vdc

APPLICATIONS

- Continuous Operation In Harsh Industrial Conditions

TYPICAL INDUSTRIES

- Factory Automation
- Woodworking and Metal Forming
- Material Handling and Packaging

ISO 9001 CERTIFIED

CE

Product overview

MTS Sensors continues to establish new performance standards for low-cost, fully-industrial, durable position sensors using the widely preferred magnetostrictive technology. This principle for accurate and non-contact measurement of linear-position sensing was developed 30 years ago by MTS and is used with outstanding success in a large variety of industrial applications. The innovative Temposonics model ER sensor brings proven benefits of magnetostrictive feedback to the versatile rod-and-cylinder sensor package.

It is ideal for demanding industrial applications where high performance non-contact feedback is essential for maximum productivity and overall reliability. The model ER sensor's rod-and-cylinder design has a rod that can extend from the sensor housing. As the rod is extended and retracted, the sensing magnet remains completely contained and protected at all times, ensuring reliable sensor performance in the toughest industrial environments.

Communication

SENSOR PARAMETER UPLOAD FEATURE

For applications using smart sensor interfaces, the Model ER sensor with Start/Stop output *(Option **R3**)* comes with the ability to perform sensor parameter uploads. This feature replaces the task of entering sensor data manually, saving time and preventing possible entry errors during start-up or for system maintenance.

Note: Start/Stop output (option R3)

When the sensor parameter upload feature is not activated the Start/Stop output (Option **R3**) remains fully compatible with the Start/Stop output (Option **R0**) used in the previous generation E-Series sensor family.

The upload feature supports the following sensor parameters:

- Measuring range
- Offset
- Gradient - (Shown as speed of the sonic-strain pulse (m/s) or inverse speed (µs/in.)
- Status
- Manufacturer number

The sensor's specific parameters can be retrieved by the controller and interface module at any time, via the sensor's Start/Stop signal lines.

The sensor parameter upload feature requires a customer supplied RS-422 interface. The data format is serial, 4800 Baud, 8-bit data length. Please contact the factory for additional parameter upload protocol details.

Model ER rod-and-cylinder sensor dimension references

Drawings are for reference only, contact applications engineering for tolerance specific information.

A robust aluminum extrusion forms the sensor housing containing the sensor rod, magnet, sensing element and electronics. The permanent magnet is mounted on a sliding carrier attached to the end of the rod. As the rod moves in and out, the magnet travels above the sensing element inside the sensor housing.

Output

The Temposonics E-Series Model EP2 analog output sensor comes standard with integrated analog conditioning electronics. The sensor can be connected to a control system or indicator directly without the need for an additional interface. Built-in microelectronics produce a continuous voltage output that is proportional to the magnet position. The active measurement stroke range is factory set *(see 'Figure 1')*.

MTS Sensors continues to establish new performance standards for low-cost, fully-industrial, durable position sensors using the widely preferred magnetostrictive technology. This principle for accurate and non-contact measurement of linear-position sensing was developed 30 years ago by MTS and is used with outstanding success in a large variety of industrial applications.

E-Series Model EP2 sensors with digital-pulse (start/stop) output, can be ordered from the MTS ***Online Store*** at *http://www.mtssensorsstore.com*

Product specifications

Parameters	Specifications
OUTPUT	
Measured output variables:	Position; single or multi-position measurements
Resolution:	0.1, 0.01and 0.005 mm (controller dependent)
Linearity deviation:	< ± 0.02% full stroke (minimum ± 60 µm)
Repeatability:	< ± 0.001% full stroke (minimum ± 2.5 µm)
Output:	**Digital-pulse (start/stop):** RS-422 differential signal **Serial parameter upload available for:** measuring range, offset, gradient and status.
Position measurement:	**Measurement Stroke lengths:** 4, 6, 9, 12, 15, 18, 21, 24, 30, 36, 42, 48, 54 and 60 inches Contact factory for custom stroke lengths **Update frequency:** Controller dependent
ELECTRONICS	
Operating voltage:	**+24 Vdc nominal:** -15% or +20% **Polarity protection:** up to -30 Vdc **Overvoltage protection:** up to 36 Vdc **Current drain:** Start/Stop, 50 - 100 mA *(Stroke length dependent)* **Dielectric withstand voltage:** 500 Vdc (DC ground to machine ground)

Parameters	Specifications
ENVIRONMENTAL	
Operating conditions:	**Operating temperature:** -40 °C (-40 °F) to 75 °C (167 °F) **Relative humidity:** 90% no condensation
EMC test:	**Emissions:** IEC/EN 50081-1 **Immunity:** IEC/EN 50082-2 IEC/EN 61000-4-2/3/4/6, criterium A, CE qualified
Shock rating:	50 g (single hit)/ IEC standard 60068-2-27 (survivability)
Vibration rating:	5 g/10 to 2000 Hz, IEC standard 60068-2-6 (operational)
WIRING	
Connection type:	6-pin DIN (M16) male D60 connector
PROFILE STYLE SENSOR (MODEL EP2)	
Sealing:	IP 67
Sensor extrusion:	Aluminum
Mounting:	Any orientation. Adjustable mounting feet.
Magnet type:	Block magnet with stamped metal carrier

Output

The Temposonics E-Series Model EP2 digital-pulse (start/stop) output sensor requires a start signal from a controller or interface module to initiate the measurement cycle. The sensor generates a stop signal at the end of the measurement cycle that is used to stop the controller's counter clock. The elapsed time between the Start and Stop signals is directly proportional to the magnet's position along the active stroke length. The controller can calculate the absolute position of the magnet from the time value and the sensor's unique gradient value (inverse of the speed for the sonic pulse traveling in the sensor's waveguide). *(see 'Figure 1').*

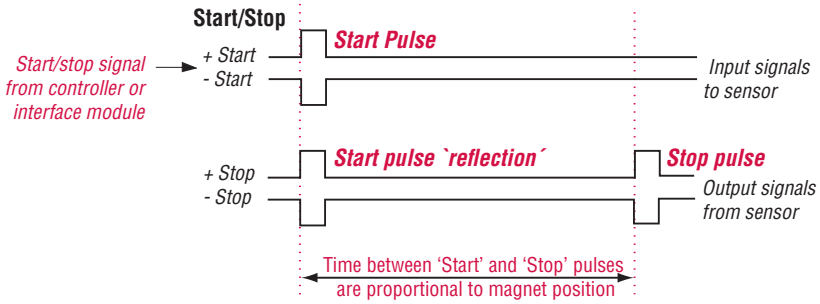

Figure 1. Stop/start output signals (RS-422 differential pairs)

Communication

SENSOR PARAMETER UPLOAD FEATURE

For applications using smart sensor interfaces, the E-Series Model EP2 with digital-pulse output comes with the ability to perform sensor parameter uploads. This feature replaces the manual task of entering sensor data saving time and preventing possible entry errors during start-up, or for system maintenance.

The upload feature supports the following sensor parameters:

- Measuring range
- Offset
- Gradient (Inverse speed of sensing pulse)
- Status

The sensor's specific parameters can be retrieved by the controller/interface module at any time, via the sensor's start/stop signal lines.

The sensor parameter upload feature requires a customer supplied RS-422 interface. The data format is serial, 4800 Baud, 8-bit data length. Please contact the factory for additional parameter upload protocol details.

MUTI-POSITION MEASUREMENT

The Model EP2 digital-pulse output sensor provides multi-position measurements when used with more than one position magnet, and an appropriate controller/interface module. The minimum allowed distance between magnets is 3.0 in. (76 mm) to maintain proper sensor output. The total number of magnets is limited by the EP2 stroke length, and the interface module/controller that is used.

Refer to the Accessories section of this catalog for magnet selections and detailed mounting and installation information.

Connections and wiring

SENSOR INTEGRAL CONNECTOR (D60 MALE) PINOUT/ WIRE COLOR CODE (FOR EXTENSION CABLE OPTION)

The E-Series Model EP2 sensor connects directly to a controller, or interface module via male, 6-pin integral connector and extension cable option.

Wiring color and signal functions for the extension cable option are described in *'Table 1'*.

Integral D6 connector (male) as viewed from the end of the sensor

Pin no.	Wire color	Signal/Function Digital-pulse outputs
1	Gray	(-) Stop
2	Pink	(+) Stop
3	Yellow	(+) Start
4	Green	(-) Start
5	Red or Brown	+24 Vdc (-15% / +20%)
6	White	DC Ground (0 Vdc)

Table 1. EP2 digital-pulse (start/stop) sensor extension cable wiring diagram

Attention:

The EP2 sensor's aluminum housing has an anodic coating which prevents the sensor's mounting feet (part no. 400802) from providing the appropriate grounding. A grounding lug *(see 'Figure 3')* is provided near the connector end of the sensor for a convenient connection to earth ground.

The appropriate grounding of the cable shield is required at the controller end.

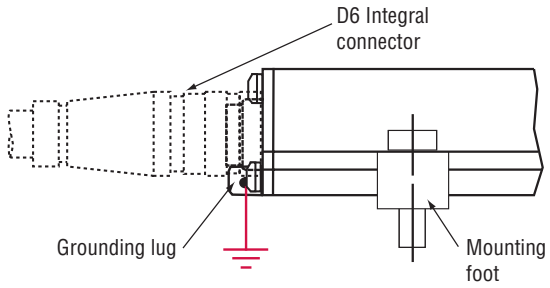

Figure 3. EP2 Sensor grounding lug location

E-Series Model EP2 Sensor, Digital-pulse (Start/Stop) Output - Ordering Information

Use the order matrix below to configure your Model EP2 digital-pulse (start/stop) sensor order number. Contact the factory for custom sensor orders.

For your convenience, the E-Series Model EP2 sensor with digital-pulse (start/stop) output can be purchased from the MTS ***Online Store*** at: *http://www.mtssensorsstore.com*

Model RH Rod-Style sensor mounting

The position magnet requires minimum distances away from ferrous metals to allow proper sensor output. The minimum distance from the front of the magnet to the cylinder end cap is 15 mm (0.6 in.).

The minimum distance from the back of the magnet to the piston head is 3.2 mm (0.125 in.). However, a minimum distance of at least 5 mm (0.197 in.) is preferred for added performance margin.The non-ferrous spacer (part no.: 400633) provides this minimum distance when used along with the standard ring magnet (part no.: 201542-2), as shown in 'Figure 1'.

For applicable magnet selections, refer to *'Magnet Selections'*.

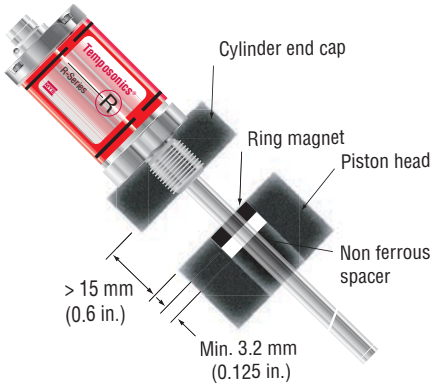

Figure 1. Model RH rod-style mounting

MODEL RH CYLINDER INSTALLATION

When used for direct-stroke measurement in fluid cylinders, the sensor's high pressure, stainless steel rod installs into a bore in the piston head/rod assembly as illustrated. This method guarantees a long-life and trouble-free operation.

The sensor cartridge can be removed from the flange and rod housing while still installed in the cylinder. This procedure allows quick and easy sensor cartridge replacement, without the loss of hydraulic pressure.

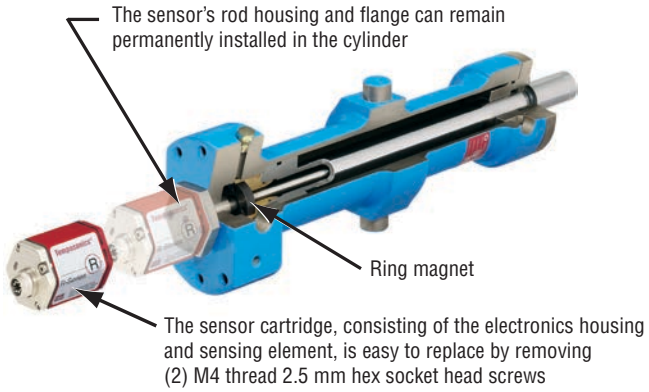

Figure 3. Fluid cylinder installation

Model GH rod-style sensor mounting

The position magnet requires minimum distances away from ferrous metals to allow proper sensor output. The minimum distance from the front of the magnet to the cylinder end cap is 15 mm (0.6 in.).

The minimum distance from the back of the magnet to the piston head is 3.2 mm (0.125 in.). However, a minimum distance of at least 5 mm (0.197 in.) is preferred for added performance margin.The non-ferrous spacer (part no.: 400633) provides this minimum distance when used along with the standard ring magnet (part no.: 201542-2), as shown in 'Figure 3*'*.

For applicable magnet selections, refer to *'Magnet Selections'*.

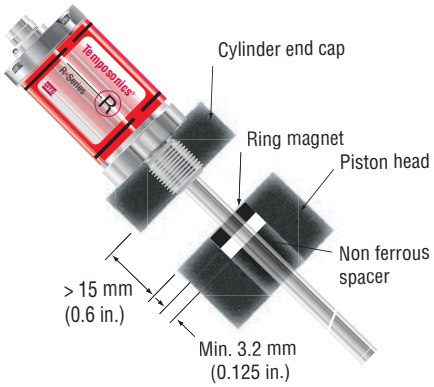

Figure 3. Model GH rod-style mounting

MODEL GH CYLINDER INSTALLATION

When used for direct-stroke measurement in fluid cylinders, the sensor's high pressure, stainless steel rod installs into a bore in the piston head/rod assembly *(See 'Figure 4')*. This method guarantees a long-life and trouble-free operation.

The sensor cartridge can be removed from the flange and rod housing while still installed in the cylinder. This procedure allows quick and easy sensor cartridge replacement, without the loss of hydraulic pressure.

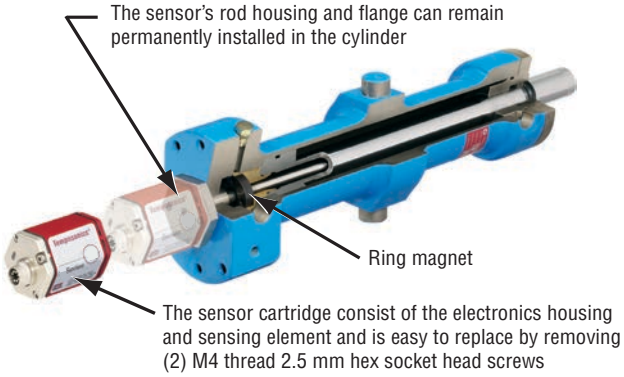

Figure 4. Fluid cylinder installation

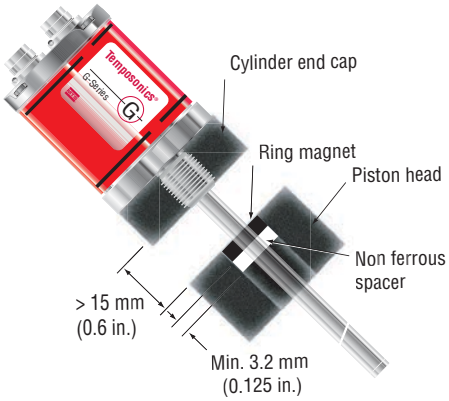
Models GT2/GT3 rod-style sensor mounting

The position magnet requires minimum distances away from ferrous metals to allow proper sensor output. The minimum distance from the front of the magnet to the cylinder end cap is 15 mm (0.6 in.).

The minimum distance from the back of the magnet to the piston head is 3.2 mm (0.125 in.). However, a minimum distance of at least 5 mm (0.197 in.) is preferred for added performance margin. The non-ferrous spacer (part no.: 400633) provides this minimum distance when used along with the standard ring magnet (part no.: 201542-2), as shown in 'Figure 5*'*.



For applicable magnet selections, refer to *'Magnet Selections'*.

Figure 5. Models GT2/GT3 rod-style mounting

MODELS GT2/GT3 CYLINDER INSTALLATION

When used for direct-stroke measurement in fluid cylinders, the sensor's high pressure, stainless steel rod installs into a bore in the piston head/rod assembly *(See 'Figure 6')*. This method guarantees a long-life and trouble-free operation.

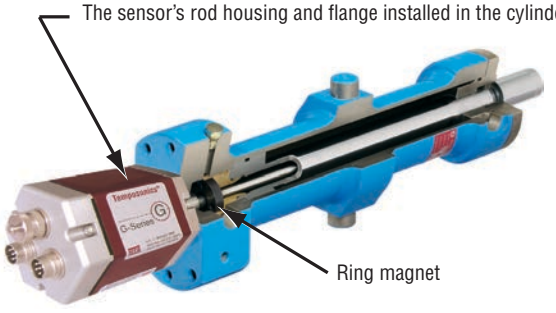


Figure 6. Fluid cylinder installation example

Note:

Unlike the G-Series Model GH sensor (shown in figure 4), GT2/GT3 redundant sensor models do not have a replaceable sensor cartridge feature.

Models RP and GP sensor mounting references

PROFILE-STYLE SENSOR MOUNTING

Temposonics models RP and GP profile-style sensors offer two basic mounting methods; side grooves for use with mounting feet or a bottom groove that accepts a special T-Slot nut (part no.: 401602). Both the mounting feet and T-Slot nuts can be positioned along the sensor extrusion to best secure the sensor for each particular application.

Notes:

1. Models RP and GP sensors include two mounting feet, (part no. 400802) for sensors stroke lengths up to 1250 mm (50 in.)
2. One additional mounting foot is included for stroke lengths over 1250 mm (50 in.) and for each additional 500 mm (20 in.), thereafter.
3. MTS recommends using 10-32 cap screws (customer supplied) at a maximum torque of 44 in. lbs. when fastening mounting feet.
4. The T-Slot nut (part no.: 401602) requires a ***customer supplied*** M5 threaded stud and nut.

For applicable magnet selections, refer to *'Magnet Selections'*.

Model EH Rod-Style sensor mounting

MODEL EH SENSOR MOUNTING

The model EH sensor is designed for direct stroke measurement inside prepared hydraulic cylinders. At the head of the sensor, a threaded flange and O-Ring provides for mounting and sealing the sensor into a port opening in the cylinder end cap. The sensor's pressure resistant rod fits into a bore drilled through the center of the piston head and rod assembly. The sensor's position magnet is mounted on the top of the piston head or installed in a shallow counter-bore inside the piston head.

The position magnet requires minimum distances away from ferrous metals to allow proper sensor output. The minimum distance from the front of the magnet to the cylinder end cap is 15 mm (0.6 in.).

The minimum distance from the back of the magnet to the piston head is 3.2 mm (0.125 in.). However, a minimum distance of at least 5 mm (0.197 in.) is preferred for performance margin. The non-ferrous spacer (part no. 400633), provides this minimum distance when used along with the standard ring magnet (part no. 201542-2), as shown in *'Figure 7'*.

The magnet is usually secured using non-ferrous fastening material (customer supplied). Screws must be made of nonmagnetic stainless steel or brass. In the event that a ferrous circlip or retaining ring will be used to secure the magnet in a counter-bore then an additional non-ferrous spacer (> or = 3.2 mm) must be placed between the circlip or retaining ring and the front side of the magnet.

The cylinder's design ratings for hydraulic pressure and piston velocity will determine the appropriate size for the bore that is drilled through the center of the piston head and rod assembly. The recommended minimum size for this bore is 10 mm (0.39 in.) when using the 7 mm (0.27 in.) diameter sensor rod.

Likewise, the recommended minimum size of 13 mm (0.51 in.) should be used when installing the 10 mm diameter sensor rod. Some applications using long sensor rods may benefit by adding a bushing (e.g. made of flourelastomer material) to prevent wear on the magnet and sensor rod (customer supplied).

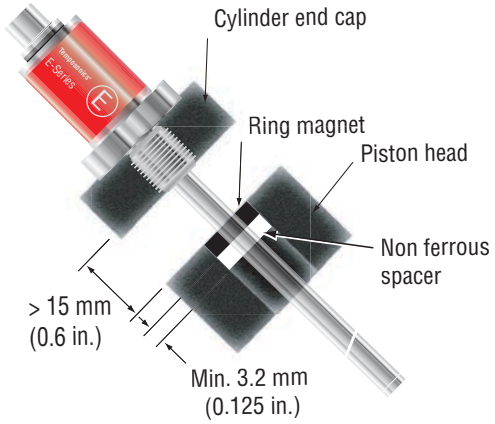

Figure 7. Model EH rod-style mounting

Sensor mounting (Models EP and EL)

SENSOR MOUNTING CLAMPS

E-Series models EP and EL sensors are mounted onto the machine with moveable mounting clamps. Mounting clamps slide into side grooves and should be evenly distributed along the sensor extrusion to best secure the sensor for each particular application.

Notes:

1. Models EP and EL sensors include two mounting clamps, (part number 403508), for stroke lengths up to 1250 mm (50 in.). One additional mounting clamp is included for longer stroke lengths.
2. MTS recommends using 10-32 cap screws (customer supplied) at a maximum torque of 44 in. lbs. when fastening mounting clamps.

Sensor mounting (Model ER)

SENSOR MOUNTING CLAMPS

The E-Series model ER sensor is mounted onto the machine with moveable mounting clamps. Grooves for mounting clamps are available on three sides of the sensor housing, allowing versatile mounting orientations for the sensor's connector and extension cable. The rod is then attached to the moving machine part. Optional rod ends can be used to simplify sensor installation design and facilitate articulated motion sensing. Using dual rod ends the model ER sensor can be mounted between two independent moving points, such as swinging door applications. Please note for model ER sensors having stroke lengths over 750 mm (30 in.) only the first 90% of the stroke length can be used for articulated type applications when the weight of the sensor is supported only by rod ends.

Notes:

1. Mounting clamps are ordered separately. Two mounting clamps, (part number 403508) are required for stroke lengths up to 750 mm (30 in.). A least one additional mounting clamp is required for longer stroke lengths.
2. MTS recommends using 10-32 cap screws (customer supplied) at a maximum torque of 44 in. lbs. when fastening mounting clamps.

Sensor mounting

MODEL EP2 SENSOR MOUNTING

Temposonics model EP2 profile-style sensors are mounted onto a flat straight surface of the machine with moveable mounting feet. A pair (2) mounting feet are provided with each sensor. Two additional mounting feet (part no. 400802) are included for measurement stroke lengths greater than 48 inches. Mounting feet slide into side grooves and should be evenly distributed along the sensor extrusion to best secure the sensor for each particular application.

Notes:

1. Additional mounting feet can be ordered separately.
2. MTS recommends using 10-32 cap screws (customer supplied) at a maximum torque of 44 in. lbs. when fastening mounting feet.

	**Female Connector, Straight Exit with Black Polyurethane Jacket Cable (for higher resistance to moisture, oil and cold temperatures)** *(Assembly Includes D6 Connector, Part No.: 560700 and Cable, Part No.:530052)*	**DJ**
	**Female Connector, 90° Exit with Black Polyurethane Jacket Cable (for higher resistance to moisture, oil and cold temperatures)** *(Assembly Includes D6 Connector, Part No.: 560778 and Cable, Part No.:530052)*	**DK**

Ordering Information
Extension Cable with Connector for D6 (D60) Connection Types

D							
1	2	3	4	5	6	7	8

SENSOR CONNECTION TYPES = D _ (1 - 2)

D6 = Female connector, straight exit (part no. 560700), and PVC jacket cable (part no. 530026)
DA = Female connector, 90° exit (part no. 560778), and PVC jacket cable (part no. 530026)
DJ = Female connector, straight exit (part no. 560700), and black polyurethane jacket cable (part no. 530052)
DK = Female connector, 90° exit (part no. 560778), and black polyurethane jacket cable (part no. 530052)

CABLE LENGTHS = _ _ _ (3 - 5)

For standard length cables up to 100 ft.

005 = 5 ft.
015 = 15 ft.
025 = 25 ft.
050 = 50 ft.
100 = 100 ft.

For custom length cables over 100 ft.
_ _ _ = Cable length (maximum cable length is dependent on the output selected; consult MTS Applications Engineering)

CABLE TERMINATION = _ _ _ (6 - 8)

P0 = Pigtail cable without connector (2 digit code)
D6M = D6 male connector (straight exit). Only available with the **D6** option above.
D6F = D6 female connector (straight exit). Only available with the **D6** option above.
DAF = D6 female connector (90° exit). Only available with the **DA** option above.

EXTENSION CABLE WITH CONNECTORS FOR R-SERIES PROFIBUS SENSORS WITH (D63) CONNECTION TYPES

Extension cable and connector assemblies	Description	Connection type
	**Hybrid Profibus Bus Cable, straight exit, 6-pin DIN female connector, with PG9 strain relief for (D63) sensor connection types** *(Assembly Includes D63 Connector, Part no.: 370423 and Cable, Part no.:530040)*	**DF**
	**Hybrid Profibus Bus Cable, straight exit, 6-pin DIN male connector with PG9 strain relief for (D63) sensor connection types** *(Assembly Includes D63 Connector, Part no.: 370427 and Cable, Part no.:530040)*	**DG**

ORDERING INFORMATION - EXTENSION CABLE WITH CONNECTORS FOR R-SERIES PROFIBUS SENSORS WITH (D63) CONNECTION TYPES

D							
1	2	3	4	5	6	7	8

SENSOR CONNECTION TYPES = D _ 1 - 2

DF = Female connector, straight exit (part no. 370423), and Profibus cable *(part no.: 530040) with (D63) type connector*
DG = Female connector, 90° exit (part no. 560778), and Profibus cable *(part no.: 530040)* with (D63) type connector

CABLE LENGTHS = _ _ _ 3 - 5

For standard length cables up to 100 ft.

005 = 5 ft.
015 = 15 ft.
025 = 25 ft.
050 = 50 ft.
100 = 100 ft.

For custom length cables over 100 ft.

— — — = Cable length (maximum cable length is dependent on baud rate).

CABLE TERMINATION = _ _ _ 6 - 8

P0 = Pigtail cable without connector (2-digit code)
DFM = Male connector, (Straight exit). For daisy-chain connections of Profibus sensors with D63 connector.
DGM = Male connector, (90° exit). For daisy-chain connections of Profibus sensors with D63 connector.

BUS CABLE WITH CONNECTORS FOR R-SERIES ETHERNET SENSOR MODELS WITH (D56) CONNECTION TYPES

Bus Cable Connector and Dimensions *(Drawing dimensions are for reference only)*	Description / Specifications	Sensor Model	Cable Length	Part number
Bus cable connector option  	**Industrial Ethernet cable (Cat 5e Es) D-Coded** **Connector type:** Two Male, 4-pin (M12) **Cable jacket:** PUR cable jacket (green **Installation:** Field installable	**RP/RH RF, RD4** EtherCAT EtherNet/IP	5 m	530064
 	**Industrial Ethernet cable (Cat 5e Es) D-Coded** **Connector type:** One RJ45 connector and one male, 4-pin (M12) **Cable jacket:** PUR cable jacket (green) **Installation:** Cables using the RJ45 connector provide convenient sensor connection to a PC for setup and programming but are not recommended for factory floor installations.	**RP/RH RF, RD4** EtherCAT EtherNet/IP	5 m	530065

Power Cable Connector and Dimensions *(Drawing dimensions are for reference only)*	Power cable, Female 4-pin (M8) and cable with pigtail termination	RP/RH RF, RD4	Cable Length	Part number
 	**Input:** 24 Vdc **Wire gage:** 4x0.25 mm² shielded **Cable jacket:** PUR	EtherCAT EtherNet/IP	5 m 10 m 15 m	530066 530096 530093

M12 CORD SETS AND (M16) ADAPTER CABLE OPTIONS *(Photo and drawing dimensions are for reference only)*

Cord set and dimensions	Description	Sensor Model	Part number
 	**M12 Cord set, female connector, Straight exit** 5-Pin (M12) mates with standard male (D34) integral connector **Ingress protection:** IP67 **Cable:** 5 m, shielded, pigtail end	**EH** **EP** **EL** **ER** Analog	370673
(Image not available) 	**M12 Cord set, female connector 90° exit** 5-Pin (M12) mates with standard male (D34) integral connector **Ingress protection:** IP67 **Cable:** 5 m, shielded, pigtail end	**EH** **EP** **EL** **ER** Analog	370675
 	**M12 Cord set, female connector, straight exit** 8-Pin (M12) mates with standard male (D84) integral connector **Ingress protection:** IP67 **Cable:** 5 m, shielded, pigtail end	**EH** **EP** **EL** **ER** Start/Stop	370674
(Image not available) 	**M12 Cord set, Female, Connector 90° Exit** 8-Pin (M12) mates with standard male (D84) integral connector **Ingress protection:** IP67 **Cable:** 5 m, shielded, pigtail end	**EH** **EP** **EL** **ER** Start/Stop	370676

CABLE RETROFITS WHEN REPLACING TEMPOSONICS II AND L-SERIES MODEL LH SENSORS WITH INTEGRAL RB CONNECTORS

Adapter Cable Description and Specifications	Sensor Replacement	Cable Length 1 ft.	Cable Length 5 ft.	Part number
Female, straight exit D6 to male RB cable connections 	**GH/GP** Analog	●		253243-1
	GH/GP Digital-pulse or Neuter	●		253243-2
Female, straight exit D6 to male RB cable connections 	**GH/GP** Analog		●	253244-1
	GH/GP Digital-pulse and Neuter		●	253244-2

CABLE RETROFITS WHEN REPLACING TEMPOSONICS II SENSORS WITH INTEGRAL RC CONNECTORS

Adapter Cable Description and Specifications	Sensor Replacement	Cable Length 1 ft.	Cable Length 5 ft..	Part number
Female, straight exit D6 to male RC cable connections 	**GH/GP** Analog	●		201612-1
	GH/GP Digital-pulse and Neuter	●		201612-2
Male RC to female RB cable connections 	**Adapter RC to RB**	6 in.		401327

Adapter Cable Retrofits

CABLE RETROFITS WHEN REPLACING MODEL LH SENSORS WITH IN-LINE 10-PIN MS CONNECTORS

Adapter Cable Description and Specifications	Sensor Replacement	Cable Length 1 ft.	Cable Length 5 ft.	Part number
Female, straight exit D6 to male MS cable connections 	**GH/GP** Analog	●		253245-1
	GH/GP Digital-pulse and Neuter	●		253245-2
	**GH/GP** Analog		●	253246-1
	GH/GP Digital-pulse or Neuter		●	253246-2

CABLE RETROFITS WHEN REPLACING TEMPOSONICS II AND L-SERIES MODEL LH SENSORS WITH IN-LINE 10-PIN MS CONNECTORS WIRED FOR R1, R2 OR R3 CONNECTION TYPES

Adapter Cable Description and Specifications	Sensor Replacement	Cable Length 1 ft.	Cable Length 5 ft.	Part number
Female, straight exit D6 to MS (R1, R2 or 10-pin male) cable connections 	**10-pin R3 Connection using GH/GP** Digital-pulse	●		253245-3
	**10-pin R3 Connection using GH/GP** Digital-pulse		●	253246-3

Adapter Cable Retrofits

CABLE RETROFITS WHEN REPLACING TEMPOSONICS II AND L-SERIES MODEL LH SENSORS WITH IN-LINE 10-PIN MS CONNECTORS WIRED FOR R1, R2 OR R3 CONNECTION TYPES

Adapter Cable Description and Specifications	Sensor Replacement	Cable Length 1 ft.	Cable Length 5 ft.	Part number
	**R1 Connection using GH/GP** with Positive interrogation		●	253302-1
	R2 Connection for GH/GP with negative interrogation		●	253302-2

CABLE RETROFITS WHEN REPLACING R-SERIES AND L-SERIES SENSOR MODELS LH AND LP WITH INTEGRAL RG CONNECTORS

Adapter Cable Description and Specifications	Sensor Replacement	Cable Length 1 ft.	Cable Length 5 ft.	Part number
Female, straight exit D6 to male RG cable connections 	**RH/RP** Analog **GH/GP** Analog and Digital-pulse	●		253248-1
	RH/RP Analog **GH/GP** Analog and Digital-pulse		●	253248-2
Female, straight exit D7 to male RG cable connections 	**RH/RP** SSI	●		253315-1
	RH/RP SSI		●	253315-2

CABLE RETROFITS WHEN REPLACING MODEL LP SENSORS WITH INTEGRAL C-STYLE OR IN-LINE H OR J STYLE CONNECTORS

Adapter Cable Description and Specifications	Sensor Replacement	Cable Length 1 ft.	Cable Length 7 ft.	Part Number
Female, straight exit D6 to male AMP cable connections 	**GH/GP** Analog	●		253247-1
	GH/GP Digital-pulse	●		253247-2
	GH/GP Analog		●	253247-3
	**GH/GP** Digital-pulse		●	253247-4
	GH/GP Reverse-acting Analog	●		253710-1

CABLE RETROFITS WHEN REPLACING MODEL LP SENSORS WITH INTEGRAL C-STYLE OR IN-LINE H OR J STYLE CONNECTORS

Adapter Cable Description and Specifications	Sensor Replacement	Cable Length 1 ft.	Cable Length 7 ft.	Part Number
5-pin Female (M12) to 8-pin male AMP cable connections 	**EP/ER** Analog		●	254259
8-pin Female (M12) to 8-pin male AMP cable connections 	**EP/ER** Start/Stop		●	254261

CABLE RETROFITS WHEN REPLACING E-SERIES WITH INTEGRAL 6-PIN (D60) CONNECTORS

Adapter Cable Description and Specifications	Sensor Replacement	Cable Length 300 mm	Part number
5-pin female (M12) to 6-pin male D60 cable connections 	**E-Series 2011**	●	254257
8-pin female (M12) to 6-pin male D60 cable connections 	**E-Series 2011**	●	254258

CABLE RETROFIT WHEN REPLACING L-SERIES SENSORS WITH REVERSE-ACTING OUTPUT

Adapter Cable Description and Specifications	Sensor Replacement	Cable Length	Part number
Female, straight exit D6 to male D6 cable connections 	**GH/GP** Reverse-acting Analog	1 ft.	253411

Adapter Cable Retrofits

4-PIN STYLE CABLE CONNECTOR FOR R-SERIES INDUSTRIAL ETHERNET SENSOR CONNECTIONS

Cable Connector and Dimensions	Description / Specifications	Sensor Model Reference	Part number
Female, straight exit cable connections  	**Bus Cable Connector, Male** **Style:** 4-pin (M12) **Housing:** Zinc nickel plated **Termination:** D-coded with insulation displacement technology **Installation:** Field installable	**RP/RH** EtherCAT EtherNet/IP	370523
	**Connector end cap** (Unused connectors should be covered by this protective cap)	**RP/RH** EtherCAT EtherNet/IP	370537

MATING CABLE CONNECTOR OPTIONS FOR (D34) CONNECTOR TYPES *(Photo and drawing dimensions are for reference only)*

Connector and dimensions	Description	Sensor Model Reference	Part number
 	**Female cable connector, straight exit (Field installable)** 5-Pin (D34) Mates with standard male (M12) integral connector **Termination:** Screw terminals **Cable gland:** PG9 for 6-8 mm dia. cable **Ingress protection:** IP67	**EP/ER/EH/EL** Analog	370618
 	**Female cable connector, 90° exit (Field installable)** 5-Pin (D34) Mates with standard male (M12) integral connector **Termination:** Screw terminals **Cable gland:** PG9 for 6-8 mm dia. cable **Ingress protection:** IP67	**EP/ER/EH/EL** Analog	370619

MATING CABLE CONNECTOR OPTIONS FOR (D84) CONNECTOR TYPES *(Photo and drawing dimensions are for reference only)*

Connector and dimensions	Description	Sensor Model Reference	Part number
 	**Female cable connector, straight exit (Field installable)** 8-Pin (D84) Mates with standard male (M12) integral connector **Termination:** Screw terminals **Cable gland:** PG9 for 6-8 mm dia. cable **Ingress protection:** IP67	**EP/ER/EH/EL** Start/Stop	370671
 	**Female cable connector, 90° exit (Field installable)** 8-Pin (D84) Mates with standard male (M12) integral connector **Termination:** Screw terminals **Cable gland:** PG9 for 6-8 mm dia. cable **Ingress protection:** IP67	**EP/ER/EH/EL:** Start/Stop	370672

Connectors

5-PIN STYLE CONNECTOR OPTIONS FOR R-SERIES DEVICENET SENSORS WITH (D51) CONNECTION TYPES

Connector and Dimensions *(Drawing dimensions are for reference only)*	Description and Specifications	Sensor Model Reference	Part Number
	**Cable connector, female, straight exit** **Style:** 5-pin (D51) **Installation:** Field installable	**RP/RH** DeviceNet	370375
	**Cable connector, female,90° exit** **Style:** 5-pin (D51) Field installable	**RP/RH** DeviceNet	370376

5-PIN CABLE CONNECTOR OPTIONS FOR R-SERIES PROFIBUS SENSORS WITH (D53) CONNECTION TYPES

Connector and Dimensions *(Drawing dimensions are for reference only)*	Description and Specifications	Sensor Model Reference	Part Number
	**Cable connector, female, straight exit** **Style:** 4-pin (M8) **Housing:** Zinc nickel plated **Termination:** Solder **Contact insert:** Silver plated **Input Power:** 24 Vdc **Installation:** Field installable, (D53) connection types	**RP/RH** Profibus	370504
	**Cable connector, female, 90° exit** **Style:** 4-pin (M8) **Housing:** Zinc nickel plated **Termination:** Solder **Contact insert:** Silver plated **Input voltage:** 24 Vdc **Installation:** Field installable, (D53) connection types	**RP/RH** Profibus	560886
	**Cable connector, female, 90° exit** **Style:** 5-pin (M12) **Housing:** Zinc nickel plated **Termination:** Screw **Contact insert:** Silver plated **Installation:** Field installable, (D53) connection types	**RP/RH** Profibus	370514

5-PIN CABLE CONNECTOR OPTIONS FOR R-SERIES PROFIBUS SENSORS WITH (D53) CONNECTION TYPES

Connector and Dimensions *(Drawing dimensions are for reference only)*	Description and Specifications	Sensor Model Reference	Part number
	**Cable connector, male, 90° exit** **Style:** 5-pin (M12) **Housing:** Zinc nickel plated **Termination:** Screw **Contact insert:** Silver plated **Installation:** Field installable, (D53) connection types	**RP/RH** Profibus	370515
	**Cable connector, male, straight exit** **Style:** 5-pin (M12) **Housing:** Zinc nickel plated **Termination:** Screw **Contact insert:** Silver plated **Installation:** Field installable, (D53) connection types	**RP/RH** Profibus	560884
	**Cable connector, female, straight exit** **Style:** 5-pin (M12) **Housing:** Zinc nickel plated **Termination:** Screw **Contact insert:** Silver plated **Installation:** Field installable, (D53) connection types	**RP/RH** Profibus	560885

5-PIN CABLE CONNECTOR OPTIONS FOR R-SERIES PROFIBUS SENSORS WITH (D53) CONNECTION TYPES

Connector and Dimensions *(Drawing dimensions are for reference only)*	Description and Specifications	Sensor Model Reference	Part Number
 	**5-pin Profibus (M12) T connector** **Style:** 5-pin (M12) **Housing:** Zinc nickel plated **Termination:** Solder **Contact insert:** Silver plated **Installation:** Field installable, (D53) connection types	**RP/RH** Profibus	560887
 	**Profibus Bus Terminator, male, straight exit** **Style:** 5-pin (M12) **Housing:** Zinc nickel plated **Termination:** Solder **Contact insert:** Silver plated	**RP/RH** Profibus	560888

6-PIN DIN (D60) STYLE CABLE CONNECTOR OPTIONS

Connector and Dimensions *(Drawing dimensions are for reference only)*	Description / Specifications	Sensor Model Reference	Part number
 	**Profibus bus terminator for male cable connector type** **Style:** (STA09131H06) **Housing:** Zinc nickel plated **Termination:** Solder **Contact insert:** Silver plated **Installation:** Field installable, Mates with standard male connector	**RP/RH** Profibus	252347

Connectors

Connectors for Sensors with (D63/D60) Connection Types

6-PIN DIN (D60) STYLE CABLE CONNECTOR OPTIONS

Connector and Dimensions *(Drawing dimensions are for reference only)*	Description and Specifications	Sensor Model Reference	Part number

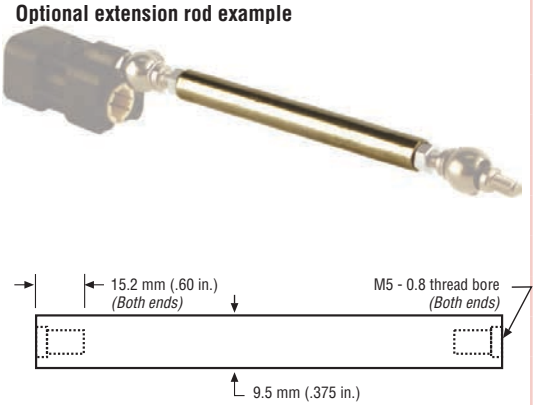
Optional extension rod example



OPTIONAL INSTALLATION HARDWARE

Hardware and Dimensions	Description and Specifications	Sensor Model Reference	Part number
	**Profibus filter box** **Dimensions:** 80 mm (3.5 in.) X 75 mm (2.95 in.) 58 mm (2.28 in.) **Application:** EMC conformal feeding of 24 Vdc supply voltage into the Profibus-DP hybrid cable	**RP/RH** Profibus	252916
	**O-Ring** **Material:** Fluoroelastomer 75 ± 5 durometer **Dimensions:** Metric flange with M18 X 1.5 threads **Application:** Use with style M housings	**GH/RH/EH**	401133
	**Electronics housing screw** **Type:** 8-32 UNC - 2A **Application:** -Used to install sensor cartridge (RHB or GHB) into old LH or old RH pressure pipe/ flange	**GHB/RHB**	402617
	**Hex-jam nut** **Type:** 3/4-16 UNF **Material:** Stainless steel with nylon insert **Application:** T and S style housings	**GH/RH/EH**	500015
	**Hex-jam nut** **Type:** M18 X 1.5 threads **Material:** Stainless steel **Application:** Use for M style housing	**GH/RH/EH**	500018

OPTIONAL INSTALLATION HARDWARE

Hardware and Dimensions	Description and Specifications	Sensor Model Reference	Part number
	**Collar** **Material:** 304 Stainless steel **Application:** Pressure housing and float 251447	GH/RH /EH	560777
	**O-Ring** **Material:** Fluoroelastomer 75 ± 5 durometer **Dimensions:** Std. flange with 3/4-16 UNF threads **Application:** T and S style housings	GH/RH/EH	560315
	**Magnet mounting screws** **Type:** 6-32 X 7/8 Material: Stainless steel **Application:** Standard ring magnet mounting (part no,: 201542-2) 4 required or open-ring magnet mounting (part no.: 251416-2) 2 required	RH/RP GH/GP EH/EP/EL	560357
	**Fixing clip** Material: Brass, non magnetic **Application:** Used to secure sensor rod when using open-ring magnet	RH/GH/EH	561481

PROGRAMMING TOOLS

Programming selections	Description and Specifications	Sensor Model Reference	Part number
	**R-Series Analog hand-held Programmer** **Application:** Adjusting setpoints 1 and 2 for R-Series Analog output sensor models with single magnets	**RP/RH** Analog	253124
	**R-Series Analog Cabinet Programmer** **Application:** Adjusting setpoints 1 and 2 for R-Series Analog output sensor models with single magnets and features snap-in mounting on standard 35 mm DIN rail. This programmer can be permanently mounted in a control cabinet and includes a program/run switch.	**RP/RH** Analog	253408
	**R-Series Analog Programming Kit** Kit includes: Interface converter box, power supply, setup software and cabling. **Application:** Programming software for R-Series Analog output sensor models	**RP/RH** Analog	253309-1
	**R-Series SSI Programming Kit** Kit includes: Interface converter box, power supply, setup software and cabling. **Application:** Programming software for R-Series SSI output sensor models	**RP/RH** SSI	253310-1
	**R-Series Profibus Node Address Programmer kit** **Application:** Node address Programming for R-Series Profibus output sensor models	**RP/RH** Profibus	280640

PROGRAMMING TOOLS

Programming selections	Description and Specifications	Sensor Model Reference	Part number
	**R-Series CANbus Field Address Programmer** **Application:** Field address Programming for R-Series CANopen output sensor models	**RP/RH** CANopen	252382-D62
	**G-Series Analog Hand-held Programmer** **Application:** Programming for G-Series Analog output sensor models	**GP/GH** Analog	253853
	**G-Series Analog PC Programming Kit** Kit includes: Interface converter box, power supply, setup software and cabling. **Application:** Programming software for G-Series Analog output sensor models	**GP/GH** Analog	253311-1
	**G-Series Digital-pulse PC Programming Kit** Kit includes: Interface converter box, power supply, setup software and cabling. **Application:** Programming software for G-Series Digital-pulse output sensor models	**GP/GH** Digital-Pulse (PWM) (Start/Stop)	253312-1
	**Profibus master simulator**. **Application:** Function and diagnostic data verification and to perform slave address adjustments for R-Series Profibus output sensor models	**RP/RH** Profibus	401727

PRECISION POSITION MEASUREMENT HIGH PRESSURE HOUSING (HPH)

- **This High Pressure Housing is ATEX EEx approved and UL and cUL approved for use in hazardous locations with Temposonics position sensors.**
- **ATEX, UL and cUL approvals cover flammable gases, vapors and liquids. The ATEX approval also covers dust**
- **Several design combinations are available to fit your application:**
  - M18 or 3/4 in. UNF mounting flange thread
  - M20 or 1/2 in. NPT cable gland thread
  - long or short tops
  - top-mounted
  - side-mounted
  - dual side-mounted cable glands
    (See combination chart for more information)
- **All parts are made of 316L stainless steel. The HPH housing is also available in non-approved versions ensuring an outstanding protection to the sensor when used in rugged applications with high humidity and aggressive gases.**

The High Pressure Housing (HPH) is ATEX EEx approved or UL and cUL approved for use in hazardous locations with a range of Temposonics linear-position sensors

Product overview

This housing is made to fit Temposonics R-Series and G-Series sensors with analog and digital outputs, both integral cable and connector versions can be used.

The High Pressure Housing provides a cost efficient solution to sensor applications in hazardous locations. When using the HPH with Temposonics linear-position sensors, sensor maintenance and replacement is simplified.

HIGH PRESSURE HOUSING OPTIONS

Product specifications

Parameters	Specifications
OUTPUT	
ATEX:	0539 ⟨Ex⟩ II 2GD EEx d IIC T5 (100 °C) Demko 07 ATEX 142619 In accordance with EN 60079-0, EN 60079-1, EN 50284-1-1
UL/cUL:	Class 1, Division 1, Groups A, B, C and D hazardous locations Temperature code T5 As to fire, electrical shock and explosion hazards only UL certificate no. 2PD0 In accordance with UL 1203 standard Only with ATEX or UL approved cable glands
Material:	Stainless steel AISI 316L (1.4404)
Cable gland threads:	M20 x 1.5 or 1/2 in. NPT
Ingress protection codes:	IP 68 (only with IP 68 approved cable gland)
Approved sensors:	G-Series Analog + Start/Stop L-Series Analog + Start/Stop R-Series Analog R-Series Profibus R-Series CANbus R-Series SSI R-Series DeviceNet S-Series ServoSensor™ *Consult individual sensor data sheets for more product specifications and sensor ordering information at www.mtssensors.com
Mounting flange:	M18 x 1.5 or 3/4 in. - 16 UNF - 3A
Pressure rating:	350 Bar continuous
Peak pressure:	530 Bar
Magnet type:	Ring magnet (GF plastic with permanent magnet)
Level measurement:	Float on request

High Pressure Housing dimensions

HIGH PRESSURE HOUSING DIMENSION REFERENCES

The Summit High Pressure Housing is available in several design combinations and two cable gland mounting options, top and side. Refer to *'Table 1 Design Combination Chart' on page 3* for a design combination and accessory options for your application

Design Combination chart

HIGH PRESSURE HOUSING DESIGN COMBINATION SELECTION CHART

Notes:

1. ATEX approved models are manufactured in Denmark.
2. UL and cUL approved models are assembled in USA.
3. Contact factory for custom combinations.

Choose your high pressure housing from the *'HPH Design Combination Chart'* below in *'Table 1'*. HPH accessory options are described in *'Table 2'*.

TYPE	STANDARD		SPECIAL ORDER IN QUANTITIES	STANDARD	SPECIAL ORDER IN QUANTITIES	
BOTTOM / TOP	 M18	 3/4" UNF	 M20 M18	 1/2" NPT 3/4" UNF	 M20 M20 M18	 NPT 1/2" NPT 3/4" UNF
APPROVAL	ATEX ONLY		ATEX ONLY	UL AND CUL	ATEX ONLY	UL AND CUL
 M20	0100	0600				
			0900	1000	1300	1400
 M20	0300	0800				
					2100	2200

High Pressure Housing Accessories

HPH ROTATION ADAPTER

The Rotation adapter accessory (see 'Figure 4') allows you to adjust the position of the side opening when the HPH is mounted in a cylinder. RTA-3/4 in. UNF-2 is for use with the 3/4" UNF housing thread and has a 1 1/16 in. - #12 SAE Boss O-ring mounting thread.

Figure 4. RTA-3/4 in. UNF-2 Rotation adapter

Item	Description	Summit item number
M20 x 1.5 Cable gland	ATEX, 3-15 mm cable diameter, nickel plated brass	CG-912004
M20 x 1.5 Cable gland	ATEX, 4-8.5 mm cable diameter, stainless steel	CG-816679
M20 x 1.5 Cable gland	ATEX, 8.5-16 mm cable diameter, stainless steel	CG-816609
Nut for flange	316 L Stainless steel	M18 x 1.5
Spanner tool	(2 required)	DIN 1018A AMF 80-90 mm
Connector, straight exit	Female, 6-pin DIN, straight exit	HPH 6 DIN
Connector, straight exit	Female, 6-pin DIN, straight exit with 10 m cable	HPH6DIN/10MKFPUR25
HPH Rotation Adaptor	Use with M18, and M30 x 1.5	RTA-M18
HPH Rotation adaptor	Use with 3/4 in. UNF, 1 1/4 in. UNF	RTA-3/4 in. UNF
HPH Rotation adapter	Use with the 3/4 in. UNF housing thread and has a 1 1/16 in. - #12 SAE Boss O-ring mounting thread	RTA-3/4 in. UNF-2

Ordering Information

USE THE FORM BELOW TO ORDER A HIGH PRESSURE HOUSING

(Accessories described in 'Table 2' are ordered separately)

Refer to the example below when placing your order. Approved short housing with M18 mounting threads and one side mounted cable gland with M20 threads and a measuring length of 650 mm:

Example:

HPH-0900-0650-A

H	P	H									
1	2	3	4	5	6	7	8	9	10	11	12

CHOOSE A DESIGN COMBINATION FROM THE DESIGN COMBINATION CHART (4-7) = ☐☐☐☐ **4 - 7**

Refer to '*Table 1. HPH Design Combination Chart*'.

ENTER MEASURING LENGTH (8-11) = ☐☐☐☐ **8 - 11**

Refer to '*Figure 1. HPH Sensor and housing dimension references*'.

ENTER VERSION (12) = ☐ **12**

A = Approved version

N = Non approved version
